

- The ablation rate is assumed to follow Park's finite-rate ablation formulation [3-5], the mass blowing rates, $\dot{m}_i$, due to various surface-gas reactions (i.e., oxidation, nitridation, and sublimation) are:

$$\dot{m}_1 = \rho_e C_O \bar{v}_O \beta_O \frac{M_C}{M_O}; \quad (C_{(S)} + O \rightarrow CO), \quad \dot{m}_2 = 2\rho_e C_{O_2} \bar{v}_{O_2} \beta_{O_2} \frac{M_C}{M_{O_2}}; \quad (2C_{(S)} + O_2 \rightarrow 2CO),$$

$$\dot{m}_3 = \rho_e C_N \bar{v}_N \beta_N \frac{M_C}{M_N}; \quad (C_{(S)} + N \rightarrow CN), \quad \dot{m}_4 = \rho_e (C_{C_3,E} - C_{C_3}) \bar{v}_{C_3} \beta_{C_3}; \quad (3C_{(S)} \rightarrow C_3),$$

$$\dot{m}_c = \dot{m}_1 + \dot{m}_2 + \dot{m}_3 + \dot{m}_4, \quad \dot{m}_g = 0.21\dot{m}_c, \quad \dot{\mathcal{E}} = (\dot{m}_c + \dot{m}_g) / \rho_s,$$

- Such a formulation may be inappropriate to model ablation under radiative heating environment. The case study **does not** necessarily reflect the real physics, but should be regarded as a demonstration of the modeling capability of this proposed MMM procedure.

Moving Finite Elements:

Moving Finite Element Method Maria do Carmo Coimbra, Alirio Egidio Rodrigues, Jaime Duarte Rodrigues, Rui Jorge Mendes Robalo, Rui Manuel Pires Almeida, 2016-11-30 This book focuses on process simulation in chemical engineering with a numerical algorithm based on the moving finite element method MFEM It offers new tools and approaches for modeling and simulating time dependent problems with moving fronts and with moving boundaries described by time dependent convection reaction diffusion partial differential equations in one or two dimensional space domains It provides a comprehensive account of the development of the moving finite element method describing and analyzing the theoretical and practical aspects of the MFEM for models in 1D 1D 1d and 2D space domains Mathematical models are universal and the book reviews successful applications of MFEM to solve engineering problems It covers a broad range of application algorithm to engineering problems namely on separation and reaction processes presenting and discussing relevant numerical applications of the moving finite element method derived from real world process simulations

Moving Finite Elements in 2-D. Robert J. Gelinas, SCIENCE APPLICATIONS INC PLEASANTON CALIF., 1981 The moving finite element MFE method is a new PDE solution method which has shown significant promise in 1 D for the numerical solution of some of the most difficult problems under study with extremely large but finite gradients The overall objective of the present research is to explore further the promise of the continuous node moving properties of the MFE method in 2 D For this both the logical structure of the MFE method and its reduction to practice in 2 D are under investigation in this project This initial research in 2 D focuses upon such simple conservation equations as heat travelling wave and Burger s equations Work in this initial reporting period has resulted in significant computational economies for both unvectorized versions of the MFE method as it currently exists and for vectorized versions which may emerge in later efforts A working test code which is needed for essential scientific exploration and further enhancement of the MFE method in higher dimensions has been brought to nearly an operational stage of execution during this period Author

Moving Finite Elements: Regularisation Techniques M. J. Baines, 1986 *Moving Finite Elements* Michael John Baines, Professor in Applied Mathematics M J Baines, 1994 This book is mainly concerned with finite element methods for time dependent partial differential equations when the grids are allowed to move in time but also describes grid generation techniques which include grid adjustment The mechanism for grid movement derives from a generalization of the residual minimization technique which is familiar from the Galerkin finite element method The book brings together most of the work done over the last decade or so which has been stimulated by Miller s original idea and discusses the interrelationships between the techniques of the method and the established ideas of the method of characteristics Hamilton s equations the Legendre transformation and grid equidistribution The book highlights the issues involved and should provide the reader with a clear view of the current state of the subject and prompt further research

Adjerid, J. E.

Flaherty, RENSSELAER POLYTECHNIC INST TROY NY DEPT OF MATHEMATICAL SCIENCES., 1984 The authors discuss a moving finite element method for solving vector systems of time dependent partial differential equations in one space dimension The mesh is moved so as to equidistribute the spatial component of the discretization error in H^1 They present a method of estimating this error by using p hierarchic finite elements The error estimate is also used in an adaptive mesh refinement procedure to give an algorithm that combines mesh movement and refinement The authors discretize the partial differential equations in space using a Galerkin procedure with piecewise linear elements to approximate the solution and quadratic elements to estimate the error A system of ordinary differential equations for mesh velocities are used to control element motions The authors use existing software for stiff ordinary differential equations for the temporal integration of the solution the error estimate and the mesh motion Computational results using a code based on this method are presented for several examples *Moving Finite Elements* M.
