Dr. Dobb's Journal, 1999 **PRO XSL**, CAGLE, 2001-04-26 XSL is a vital companion to XML and is used for two main purposes to format or style XML data like Cascading Stylesheets so that it can be displayed in a browser and to transform XML data When you transform an XML document you manipulate the data into a new structure for example reordering the data This enables the same data store to be used in an unlimited number of ways It is the transformation ability that gives XSL and therefore XML its real power You can imagine XSL as a bridging mechanism between your XML data store and the browser It does a similar job to ASP but it is platform independent XSL can also be used to transform XML into other text formats eg HTML Pro XSL demonstrates how to decide which technique to use and how to fit XSL into the development of practical applications It also shows how to implement the data transformation processes in order to filter sort
