Frankie, Alfonso Mata, S. Bradleigh Vinson, 2025-03-21 The beautiful tropical dry forest of northwest Costa Rica with its highly seasonal rainfall and diversely vegetated landscape is disappearing even more rapidly than Costa Rica's better known rain forest primarily because it has been easier to convert to agriculture. This book based on more than thirty years of study offers the first comprehensive look at the ecology biodiversity and conservation status of this endangered and fragile region. The contributors from Costa Rica Britain Mexico and the United States and representing the fields of ecology environmental education policy and the law examine the major plant and animal groups living in the dry forest and present the first technical evaluation of Costa Rica's conservation efforts. As they assess the status of their area of specialty in the dry forest the contributors also look beyond this particular region to show how its plants and animals are ecologically and evolutionarily connected to other geographic areas in Costa Rica and Central America. Their chapters cover topics such as watershed and coastal management plant phenology pollination insects birds mammals amphibians and reptiles. They also consider the socioeconomic policy legal and political aspects of biodiversity conservation giving the volume a wide ranging perspective and making a unique contribution to our knowledge of the tropical dry forest. The book concludes with an important synthesis of the contributors' recommendations on future directions policies and actions that will better conserve biodiversity in Costa Rica and other neotropical forests as well. Brock Fenton, 2005 In recent years researchers have discovered that bats play key roles in many ecosystems as insect predators seed dispersers and pollinators. Bats also display astonishing ecological and evolutionary diversity and serve as important models for studies of a wide variety of topics including food webs biogeography and emerging diseases. In *Bat Ecology* world renowned bat scholars present an up to date comprehensive and authoritative review of this ongoing research. The first part of the book covers the life history and behavioral ecology of bats from migration to sperm competition and natural selection. The next section focuses on functional ecology including ecomorphology feeding and physiology. In the third section contributors explore macroecological issues such as the evolution of ecological diversity range size and infectious diseases including rabies in bats. A final chapter discusses conservation challenges facing these fascinating flying mammals. *Bat*
