Perceptual Organization In Vision Behavioral And Neural Perspectives:

Perceptual Organization in Vision Ruth Kimchi, Marlene Behrmann, Carl R. Olson, 2003-09-12 An exploration of ideas emanating from behavioural developmental neurophysiological neuropsychological and computational approaches to the problem of visual perceptual organization It is based on papers presented at the 31st Carnegie Symposium on Cognition held in June 2000

The Oxford Handbook of Perceptual Organization Johan Wagemans, 2015-08-21 Perceptual organization comprises a wide range of processes such as perceptual grouping figure ground organization filling in completion perceptual switching etc Such processes are most notable in the context of shape perception but they also play a role in texture perception lightness perception color perception motion perception depth perception etc Perceptual organization deals with a variety of perceptual phenomena of central interest studied from many different perspectives including psychophysics experimental psychology neuropsychology neuroimaging neurophysiology and computational modeling Given its central importance in phenomenal experience perceptual organization has also figured prominently in classic Gestalt writings on the topic touching upon deep philosophical issues regarding mind brain relationships and consciousness In addition it attracts a great deal of interest from people working in applied areas like visual art design architecture music and so forth The Oxford Handbook of Perceptual Organization provides a broad and extensive review of the current literature written in an accessible form for scholars and students With chapter written by leading researchers in the field this is the state of the art reference work on this topic and will be so for many years to come

Expertise and Skill Acquisition James J. Staszewski, 2013-05-29 The research on human expertise and complex skill acquisition that William G Chase performed in the decade between publication of the classic chess studies he conducted with Herb Simon in 1973 and his untimely and tragic death has proven profoundly influential and enduring Its impact spans disciplines that include Psychology Computer Science Education Cognitive Neuroscience Medicine and Human Factors It has contributed significantly to the emergence of Cognitive Engineering and has led to significant applications in the areas of training and instruction and knowledge based intelligent computational systems Its influence can be seen in current discussions of intelligence heritability intellectual potential and achievement found in the contemporary popular press The chapters in this volume document the enduring scientific contributions of William G Chase to current knowledge and understanding of human expertise and skill acquisition and applications his work has supported It will be of interest to those researching studying and working in the multiple fields that were greatly

influenced by Chase's work **Building Object Categories in Developmental Time** Lisa Gershkoff-Stowe, David H. Rakison, 2005-05-06 This book covers a broad range of current research topics in category development. Its aim is to understand the perceptual and cognitive mechanisms that underlie category formation and how they change in developmental time. The chapters in this book are **Shape Perception in Human and Computer Vision** Sven J. Dickinson, Zygmunt Pizlo, 2013-06-29 This comprehensive and authoritative text/reference presents a unique multidisciplinary perspective on Shape Perception in Human and Computer Vision. Rather than focusing purely on the state of the art, the book provides viewpoints from world-class researchers reflecting broadly on the issues that have shaped the field. Drawing upon many years of experience, each contributor discusses the trends followed and the progress made in addition to identifying the major challenges that still lie ahead. Topics and features: examines each topic from a range of viewpoints rather than promoting a specific paradigm; discusses topics on contours, shape hierarchies, shape grammars, shape priors, and 3D shape inference; reviews issues relating to surfaces, invariants, parts, multiple views, learning, simplicity, shape constancy, and shape illusions; addresses concepts from the historically separate disciplines of computer vision and human vision using the same language and methods. **Relational Psychophysics in Humans and Animals** Viktor Sarris, 2007-09-12 Relational Psychophysics in Humans and Animals offers a comprehensive and integrated overview of the often fragmented field of psychophysics. It introduces key concepts in psychophysics and clearly summarises and illustrates the central issues through telling examples. It combines empirical research and theoretical approaches from general psychophysics, animal psychophysics, and human infant psychophysics to create a systematic comparison of these three key areas. Throughout, Viktor Sarris makes a strong case for more comparative psychophysical research across different species and across different stages of development. He presents original research and examines frame of reference models, behavioural psychophysics, developmental psychophysics, perceptual cognitive psychophysics, and evolutionary perspectives to create an integrated framework for the direction of new research. The book will be an invaluable aid for researchers in the fields of perception and psychophysics. **Child Psychology** Lawrence Balter, Catherine S. Tamis-LeMonda, 2016-02-26 This third edition of Child Psychology continues the tradition of showcasing cutting-edge research in the field of developmental science, including individual differences, dynamic systems, and processes and contexts of development. While retaining a similar structure to the last edition, this revision consists of completely new content with updated programmatic research and contemporary research trends and interests. The first three sections highlight research that is organized chronologically by age: Infancy, Childhood, and Adolescence. Within each section, individual chapters address contemporary research on a specific area of development, such as learning, cognition, social and emotional development at that period in childhood. The fourth section, Ecological Influences, emphasizes contextual influences relevant to children of all ages, including risk and protective processes, family, and neighborhood context, race and ethnicity, peer relations, the effects of poverty, and the impact of the digital world. Child

Psychology also features a unique focus on four progressive themes First emphasis is placed on theory and explanation the why and how of the developmental process Second explanations of a transactional and multidimensional nature of development are at the forefront of all chapters Third the multi faceted approach to development highlights contextual influences and cultural diversity among children from different communities and backgrounds Finally methodological innovation is a key concern and research tools presented across chapters span the full array available to developmental scientists who focus on different systems and levels of analysis The thoroughness and depth of this book in addition to its methodological rigor make it an ideal handbook for researchers practitioners policy makers and advanced students across a range of disciplines including psychology education economics and public policy *Hans van der Laan's Instruments of Thought* Tiziana Proietti, Kees Biesen, 2024-07-26 The work of the Dutch Benedictine monk and architect Hans van der Laan 1904 1991 offers important insights into the ways in which artifacts address the complexity of human physical cognitive and social needs Van der Laan developed a number of powerful lines of thought three of which are introduced here the search for a theory of architecture the establishment of a three dimensional system of proportions named Plastic Number and analogy as the mainspring of human thinking This triad of deeply interconnected intellectual strategies represents his most important instruments of thought and is rooted in the careful observation of phenomena as they are presented to us rather than relying on conventional beliefs Van der Laan s instruments of thought lead us to reconsider the origins of human creation urging a deeper examination of our perceptual and cognitive response to the limitlessness of the surrounding environment On this basis Van der Laan develops a unique philosophy of culture and design that includes considerations on the relationship between nature culture and religious ritual Although this book is informative its principal aim is to be formative On the basis of Van der Laan s instruments of thought the authors develop a methodology to explore the Plastic Number theory and the many ways in which we perceive and interpret proportion Reintroducing playful creativity and intellectual exploration into architectural pedagogy and design practice this book is a gateway for a deeper understanding of the effects of the built environment on human behavior and the various ways in which the human mind perceives and decodes artifacts
