Radiation Science At The National Physical Laboratory 1912 1955:

Radiation Science at the National Physical Laboratory, 1912-1955 Eric Edward Smith, 1975 **Physics in Oxford, 1839-1939** Robert Fox, Graeme Gooday, 2005-06-16 Physics in Oxford 1839 1939 offers a challenging new interpretation of pre war physics at the University of Oxford which was far more dynamic than most historians and physicists have been prepared to believe It explains on the one hand how attempts to develop the University's Clarendon Laboratory by Robert Clifton Professor of Experimental Philosophy from 1865 to 1915 were thwarted by academic politics and funding problems and latterly by Clifton's idiosyncratic concern with precision instrumentation Conversely by examining in detail the work of college fellows and their laboratories the book reconstructs the decentralized environment that allowed physics to enter on a period of conspicuous vigour in the late nineteenth and early twentieth centuries especially at the characteristically Oxonian intersections between physics physical chemistry mechanics and mathematics Whereas histories of Cambridge physics have tended to focus on the self sustaining culture of the Cavendish Laboratory it was Oxford's college trained physicists who enabled the discipline to flourish in due course in university as well as college facilities notably under the newly appointed professors J S E Townsend from 1900 and F A Lindemann from 1919 This broader perspective allows us to understand better the vitality with which physicists in Oxford responded to the demands of wartime research on radar and techniques relevant to atomic weapons and laid the foundations for the dramatic post war expansion in teaching and research that has endowed Oxford with one of the largest and most dynamic schools of physics in the world *Nuclear Science Abstracts* , **X-ray Measurements and Protection, 1913-1964** Lauriston Sale Taylor, W. Reeves Tilley, 1982

A History of the Imperial Cancer Research Fund, 1902-1986 Joan Austoker, 1988 This book examines the spectacular progress that has been made in cancer research during the last 80 years describing the way discoveries have been made and asking questions about accountability decision making and the contribution of past achievement to policymaking The focus is on the experience of the Imperial Cancer Research Fund one of the leading international research centers and one of Britain's major medical charities The author takes a broad perspective and provides a comparative framework by discussing the changing relationship between the ICRF and the medical profession government and other charities notably the Cancer Research Campaign The resulting analysis of intellectual developments and scientific policies involves a unique overview of malignant disease management therapeutic and preventative strategies and the evolution of cancer services in Britain

Deadly Sunshine David Harvie, 2005 Before science acknowledged that radium could kill it was fashionably present in laboratories and in such consumer products as toys hearing devices and even contraceptives Writing for general readers Harvie traces the history of radium how its dangers were hidden primarily by ignorance and greed following its path from discovery by the Curies to glory days among scientists and people who distribute prizes its use by industry and medicine and the slow slow process of finding out what happened to those who came into extended contact with it Harvie has tracked
