Engineering Risks Ulrich Hauptmanns, Wolfgang Werner, 2012-12-06 Encouragement by colleagues and a considerable increase in the use of probabilistic analyses since the publication of the German edition in 1987 have motivated this English version A mere translation was inappropriate because a number of important studies completed in recent years had to be included among them the assessment of the risks of five nuclear power plants in the United States of America and the German Risk Study Phase B The opportunity was taken to elaborate on some concepts which have gained importance of late such as accident management An update of international safety goals was also made however this can only be a momentary view of a field subjected to frequent change Thanks are due to the Springer Verlag for the careful editing and production of the book Kaln Garching Ulrich Hauptmanns March 1990 Wolfgang Werner Preface to the German Edition With the increasing use of complex technologies there is a growing need to evaluate the associated risks The methodology of probabilistic safety and risk analysis allows predictive valuation of risks Nuclear engineering has been in the forefront of the development and application of this method In the Safety Study on US Power Plants published in 1975 the risk of an entire technology was investigated systematically and quantified for the first time Meanwhile the methods have continuously been

improved and applied to a number of nuclear power stations

The Risks of Nuclear Energy Technology Günter Kessler, Anke Vesper, Franz-Hermann Schlüter, Wolfgang Raskob, Claudia Landman, Jürgen Päsler-Sauer, 2014-08-22 The book analyses the risks of nuclear power stations The security concept of reactors is explained Measures against the spread of radioactivity after a severe accident accidents of core melting and a possible crash of an air plane on reactor containment are discussed The book covers three scientific subjects of the safety concepts of Light Water Reactors A first part describes the basic safety design concepts of operating German Pressurized Water Reactors and Boiling Water Reactors including accident management measures introduced after the reactor accidents of Three Mile Island and Chernobyl These safety concepts are also compared with the experiences of the Fukushima accidents In addition the safety design concepts of the future modern European Pressurized Water Reactor EPR and of the future modern Boiling Water Reactor SWR 1000 KERENA are presented These are based on new safety research results of the past decades In a second part the possible crash of military or heavy commercial air planes on reactor containment is analyzed It is shown that reactor containments can be designed to resist to such an airplane crash In a third part an online decision system is presented It allows to analyze the distribution of radioactivity in the atmosphere and to the environment after a severe reactor accident It provides data for decisions to be taken by authorities for the minimization of radiobiological effects to the population This book appeals to readers who have an interest in save living conditions and some understanding for physics or engineering

Biomedical Physics in Radiotherapy for Cancer Loredana Marcu, Eva Bezak, Barry Allen, 2012 The scientific and clinical foundations of Radiation Therapy are cross disciplinary This book endeavours to bring together the physics the radiobiology the main clinical aspects as well as available clinical evidence behind Radiation Therapy presenting mutual relationships between these disciplines and their role in the advancements of radiation oncology

Low Dose Exposures in the Environment C. Streffer, H. Bolt, D. Follesdal, P. Hall, J.G. Hengstler, P. Jacob, D Oughton, K. Prieß, E. Rehbinder, E. Swaton, 2013-11-11 The ever increasing release of harmful agents due to human activities have led in some areas of the world to heavy pollution In order to protect human health and the environment environmental standards that shall limit the release and the concentration of those toxic agents in the environment and hence the exposure to it have to be established The related assessment and decision making procedures have to be based on solid scientific data about the effects and mechanisms of these agents as well as on ethical social and economic aspects For risk evaluation the knowledge of the dose response curve is an essential prerequisite Dose responses without a threshold dose are most critical in this connection Such dose responses are assumed for mutagenic and carcinogenic effects which therefore dominate also the discussion in this book In the environmentally important low dose range risk estimation can only be achieved by extrapolation from higher doses with measurable effects The extrapolation is accompanied with uncertainties which makes risk evaluation as well as risk communication frequently problematic In order to ensure rational efficient and fair decisions beyond a sound scientific assessment the dialogue between disciplines with the

affected people and with the general public is necessary In this book the whole range of relevant and essential aspects of risk evaluation and standard setting is addressed Starting with the ethical foundations the sound analysis of recent scientific findings sets the frame for further reflections by theory of cognition psychosocial sciences and jurisprudence The authors end up with concluding recommendations for coping with the recent problems of standard setting in the field of environmentally relevant low doses The book is designed to a readership of scientists legislators administrators and the interested public

Population Dose and Health Impact of the Accident at the Three Mile Island Nuclear Station United States. Ad Hoc Interagency Population Dose Assessment Group, 1979 *De Minimis Risk* Chris Whipple, 2012-12-06 On May 29 and 30 1985 a workshop was held to explore the legal ethical social scientific and practical aspects of the use of the de minimis risk concept for health and safety regulation The workshop was sponsored by the Society for Risk Analysis and its National Capital Area Chapter the Environmental Protection Agency the Nuclear Regulatory Commission and the Electric Power Research Institute The two day meeting was held in Washington D C at the Brookings Institution however the Brookings Institution was not a sponsor of the meeting and did not play a role in its program De minimis risk policy considerations were addressed from a theoretical and philosophical viewpoint from a quantitative and methodological basis and through insights gained with regulatory applications The distinctions between these three approaches to the subject are not sharp most papers in these proceedings address aspects of all three topics The reader familiar with the literature on the use of risk assessment in regulatory policy and decision making will find significant new contributions to the field One of these is the examination of regulatory actions in particular actions by the EPA in response to risks of varying magnitude Many attempts to seek patterns in regulatory policies have been based on analysis of the implicit economic value in obtaining risk reductions These analyses have typically found great variability in the marginal cost effectiveness of regulatory actions
