Radiation Protection for Particle Accelerator Facilities National Council on Radiation Protection and Measurements, 2003
The purpose of this Report is to provide design guidelines for radiation protection and to identify those aspects of radiological safety that are of major or even unique importance to the operation of particle accelerator installations and to suggest methods by which safe operation may be achieved The report is written from an engineering physics viewpoint and is intended to be useful to those engaged in the design and operation of accelerators particularly in smaller institutions and organizations that do not have a large radiological protection staff **NCRP Report** ,1976 **Radiation Protection for Particle Accelerator Facilities** National Council on Radiation Protection and Measurements, 2005 **Safety for Particle Accelerators** Thomas Otto, 2020-12-29 The use of non standard technologies such as superconductivity cryogenics and radiofrequency pose challenges for the safe operation of accelerator facilities that cannot be addressed using only best practice from occupational safety in conventional industry This book introduces readers to different occupational safety issues at accelerator facilities and is directed to managers scientists technical personnel and students working at current or future accelerator facilities While the focus is on occupational safety how to protect the people working at these facilities the book also touches on machine safety how to prevent accelerators from doing structural damage to themselves This open access book offers a first introduction to safety at accelerator facilities Presenting an overview of the safety related aspects of the specific technologies employed in particle accelerators it highlights the potential hazards at such facilities and current prevention and protection measures It closes with a review of safety management and organization at accelerator facilities
