Quantum Dot Molecules Jiang Wu, Zhiming M. Wang, 2013-10-28 A quantum dot molecule QDM is composed of two or more closely spaced quantum dots or artificial atoms In recent years QDMs have received much attention as an emerging new artificial quantum system The interesting and unique coupling and energy transfer processes between the artificial atoms could substantially extend the range of possible applications of quantum nanostructures This book reviews recent advances in the exciting and rapidly growing field of QDMs via contributions from some of the most prominent researchers in this scientific community The book explores many interesting topics such as the epitaxial growth of QDMs spectroscopic characterization and QDM transistors and bridges between the fundamental physics of novel materials and device applications for future information technology Both theoretical and experimental approaches are considered Quantum Dot Molecules can be recommended for electrical engineering and materials science department courses on the science and design of advanced and future electronic and optoelectronic devices Scientific and Technical Aerospace Reports ,1994 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database Optics and Spectroscopy ,2005

The Journal of Chemical Physics ,1981-09 *Journal* American Chemical Society, 2002 *Laser Wakefield Electron Acceleration* Karl Schmid, 2011-05-18 This thesis covers the few cycle laser driven acceleration of electrons in a laser generated plasma This process known as laser wakefield acceleration LWFA relies on strongly driven plasma waves for the generation of accelerating gradients in the vicinity of several 100 GV m a value four orders of magnitude larger than that

attainable by conventional accelerators This thesis demonstrates that laser pulses with an ultrashort duration of 8 fs and a peak power of 6 TW allow the production of electron energies up to 50 MeV via LWFA The special properties of laser accelerated electron pulses namely the ultrashort pulse duration the high brilliance and the high charge density open up new possibilities in many applications of these electron beams

Fiber Lasers Liang Dong,Bryce Samson,2016-09-19 The fiber laser with its humble beginning in the late 1980s has undergone tremendous development in the past decade or so transforming itself from a research curiosity to a major force in modern manufacturing Today it is revolutionizing our economy by fundamentally changing the way we mark machine and process materials on an industrial scale The recent development of high power fiber lasers is also fundamentally shaping a wide range of other areas from physical sciences and medicine to geology and space exploration In the past few years the tactical deployment of direct energy weapons based on fiber lasers has become a reality The development of fiber lasers is rooted in a number of technical areas including optical materials optical waveguide design nonlinear optics optical fiber fabrication and optical characterization in addition to optical fiber components and fiber laser design and architecture No comprehensive in depth coverage of such diverse topical areas has appeared in a single book Many important developments have taken place in the past decade in both academia and industry This book comprehensively covers the basics technology and applications of fiber lasers including up to date developments in both academia and industry and is aimed to serve as both an introduction and research aid for graduate students engineers and scientists who are new to this field and also for veterans in the field

NMR Methods for Characterization of Synthetic and Natural Polymers Rongchun Zhang,Toshikazu Miyoshi,Pingchuan Sun,2019-07-29 Since the introduction of FT NMR spectroscopy around five decades ago NMR has achieved significant

advances in hardware and methodologies accompanied with the enhancement of spectral resolution and signal sensitivity. Rapid developments in the polymers field mean that accurate and quantitative characterization of polymer structures and dynamics is the keystone for precisely regulating and controlling the physical and chemical properties of the polymer. This book specifically focuses on NMR investigation of complex polymers for the polymer community as well as NMR spectroscopists and will push the development of both fields. It covers the latest advances for example high field DNP and ultrafast MAS methodologies and show how these novel NMR methods characterize various synthetic and natural polymers.

Young, 2000-03-03 This volume contains the written articles corresponding to the more than fifty invited presentations. Most of these articles provide current reviews of the status of various aspects of the field and are written by acknowledged experts. Topics include historical reviews, atoms, molecules, solids and surfaces, highly charged ions, nuclear effects, fundamental physics, imaging and medical applications as well as new sources and techniques. **Faculties, Publications, and**
