Rapanese French Series 1 The Musical Method Of Learning French:

Words on Cassette, 2002 R R Bowker Publishing,2002 *Composing Japanese Musical Modernity* Bonnie C.

Wade,2014-01-13 When we think of composers we usually envision an isolated artist separate from the orchestra someone alone in a study surround by staff paper and in Europe and America this image generally has been accurate For most of Japan s musical history however no such role existed composition and performance were deeply intertwined Only when Japan began to embrace Western culture in the late nineteenth century did the role of the composer emerge In *Composing Japanese Musical Modernity* Bonnie Wade uses an investigation of this new musical role to offer new insights not just into Japanese music but Japanese modernity at large and global cosmopolitan culture Wade examines the short history of the composer in Japanese society looking at the creative and economic opportunities that have sprung up around them or that they forged during Japan s astonishingly fast modernization She shows that modernist Japanese composers have not bought into the high modernist concept of the autonomous artist instead remaining connected to the people Articulating Japanese modernism in this way Wade tells a larger story of international musical life of the spaces in which tradition and modernity are able to meet and ultimately where modernity itself has been made

The Palgrave Handbook of Music and Sound in Japanese Animation Marco Pellitteri,2024-09-13 This handbook fills a substantial gap in the international academic literature on animation at large on music studies and on the aural dimensions of Japanese animation more specifically It offers a unique contribution at the intersection between music and popular culture studies on the one hand and research on Japanese animated productions often called anime as popular art forms and formats of entertainment on the other The book is designed as a reference work consisting of an organic sequence of theory grounded essays on the development of music sounds and voices in Japanese animation for cinema and television since the 1930s Each chapter deals with a phase of this history focusing on composers and performers films series and genres used in the soundtracks for animations made in Japan The chapters also offer valuable interviews with prominent figures of music in Japanese animation as well as chapter boxes clarifying specific aspects

Human speech and music share a number of similarities and differences One of the closest similarities is their temporal nature as both i develop over time ii form sequences of temporal intervals possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm and iii generate metrical expectations Human brains are particularly efficient in perceiving producing and processing fine rhythmic information in music and speech However a number of critical questions remain to be answered Where does this human sensitivity for rhythm arise How did

rhythm cognition develop in human evolution How did environmental rhythms affect the evolution of brain rhythms Which rhythm specific neural circuits are shared between speech and music or even with other domains Evolutionary processes long time scales often prevent direct observation understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives First empirical observations of music and speech in the field are contrasted and generate testable hypotheses Experiments exploring linguistic and musical rhythm are performed across sensory modalities ages and animal species to address questions about domain specificity development and an evolutionary path of rhythm Finally experimental insights are integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior
