Rarefied Gas Dynamics Vol 1 Spacelated Studies:

Rarefied Gas Dynamics Carlo Cercignani, 2000-02-28 The aim of this book is to present the concepts methods and applications of kinetic theory to rarefied gas dynamics After introducing the basic tools problems in plane geometry are treated using approximation techniques perturbation and numerical methods These same techniques are later used to deal with two and three dimensional problems The models include not only monatomic but also polyatomic gases mixtures chemical reactions A special chapter is devoted to evaporation and condensation phenomena Each section is accompanied by problems which are mainly intended to demonstrate the use of the material in the text and to outline additional subjects results and equations This will help ensure that the book can be used for a range of graduate courses in aerospace engineering or applied mathematics

Rarefied Gas Dynamics Bernie D. Shizgal, David P. Weaver, 1994 Rarefied Gas Dynamics John Harvey, Gordon Lord, 1995 The proceedings of the International Symposium on Rarefied Gas Dynamics is the standard reference work in the subject drawing contributions from the finest researchers throughout the world Presenting recent advances in the field of low density gas dynamics this multidisciplinary collection covers kinetic theory transport processes and non equilibrium phenomena and gases It will be invaluable for physicists mathematicians engineers and chemists working in the field

Rarefied Gas Dynamics Andrew D. Ketsdever, E.P. Munz, 2003-05-19 The papers in these proceedings were peer reviewed The RGD Symposia are highly interdisciplinary and encompass all aspects of rarefaction and non equilibrium phenomena in gases Rarefied flow phenomena include the mechanics and physics of low density gases and the analysis of flows which take place on a spatial scale comparable to the mean free path of a gas Topics covered include Kinetic theory and transport theory numerical methods including direct simulation Monte Carlo and molecular dynamics gas surface phenomena nano and microscale flows molecular beams atom and molecular optics clusters and aerosols external flows including space and vacuum technologies plume flows hypersonic flows molecular collision dynamics relaxation processes ionized gas flows physics of the space environment plasma processing experimental techniques diagnostics including laser induced fluorescence and electron beams applications With the increase in space activities and microfabrication capabilities new themes have emerged including rarefied hypersonic flows non equilibrium gases plasma processing nano and micro scale flows at relatively high pressures along with parallel and hybrid computational developments Because the RGD Symposia are recognized as the principle forum for the presentation of recent advances in this field it is a must for engineers and scientists in a variety of specialties
