Rational Changes In Science:

Rational Changes in Science Joseph C. Pitt, Marcello Pera, 2012-12-06 THE PROBLEMS OF SCIENTIFIC RATIONALITY Fashion is a fickle mistress Only yesterday scientific rationality enjoyed considerable attention consideration and even reverence among philosophers but today's fashion leads us to despise it and the matron rejected and abandoned as Hecuba complains *modo maxima rerum tot generis natisque potens nunc trahor exui inops* to cite Kant for our purpose who cited Ovid for his Like every fashion ours also has its paradoxical aspects as John Watkins correctly reminds in an essay in this volume Enthusiasm for science was high among philosophers when significant scientific results were mostly a promise it declined when that promise became an undeniable reality Nevertheless as with the decline of any fashion even the revolt against scientific rationality has some reasonable grounds If the taste of the philosophical community has changed so much it is not due to an incident or a whim This volume is not about the history of and reasons for this change Instead it provides a view of the new emerging image of scientific rationality in both its philosophical and historical aspects In particular the aim of the contributions gathered here is to focus on the concept around which the discussions about rationality have mostly taken place scientific change Ernan McMullin and Critical Realism in the Science-theology Dialogue Paul Laurence Allen, 2006 Scientists philosophers and theologians have wrestled repeatedly with the question of whether knowledge is similar or different in their various understandings of the world and God Although agreement is still elusive the epistemology of critical realism associated with Ian Barbour John Polkinghorne and Arthur Peacocke remains widely credible Relying on the lifetime work of philosopher Ernan McMullin this book expands our understanding of critical realism beyond a permanent stand off between the subjective and objective whether in science or theology Critical realism illuminates the subject and the objectively known simultaneously Responding to criticisms made against it this book defends critical realism in science and theology with a specific role to play in our understanding of God **Theory Change in Science** Lindley Darden, 1991 This challenging and innovative book examines the processes involved in the birth and development of new scientific ideas The author has searched for strategies used by scientists for producing new theories both those that yield a range of plausible hypotheses and ones that aid in narrowing that range She goes on to focus on the development of the theory of the gene as a case study in scientific creativity Her discussion of modern genetics greatly demystifies the philosophy of science and establishes a realistic framework for understanding how scientists actually go about their work This compelling work will interest a broad range of readers including biologists and geneticists along with historians and philosophers of science *The Advancement of Science* Philip Kitcher, 1993 Beginning from an outline of classical views in philosophy of science this text attempts to understand the notions of scientific progress scientific objectivity and the growth of knowledge *The Rationality of Science* W.H. Newton-Smith, 2002-02-07 A clear original and systematic introduction to philosophy of science which examines the theories of Popper Lakatos Kuhn and Feyerabend before proposing a new temperate rationalist

perspective Papers from the Fifth International Conference on Historical Linguistics, Galway, April 6-10 1981 Anders Ahlqvist, 1982-01-01 This volume presents a selection of the best papers from the Fifth International Conference on Historical Linguistics ICHL which was held in Galway April 6-10 1981 These papers provide an overview of work in the field of historical linguistics covering a wide variety of topics and languages *Polish Essays in the Philosophy of the Natural Sciences* W. Krajewski, 2012-12-06 Scrutinizing Science A. Donovan, R. Laudan, 2012-12-06 The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems Kofi Kissi Dompere, 2012-08-28

The monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shown to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economies sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production Irrationality Lisa Bortolotti, 2014-12-01 We talk about irrationality when behaviour defies explanation or prediction when decisions are driven by emotions or instinct rather than

by reflection when reasoning fails to conform to basic principles of logic and probability and when beliefs lack coherence or empirical support Depending on the context agents exhibiting irrational behaviour may be described as foolish ignorant unwise or even insane In this clear and engaging introduction to current debates on irrationality Lisa Bortolotti presents the many facets of the concept and offers an original account of the importance of judgements of irrationality as value judgements The book examines the standards against which we measure human behaviour and reviews the often serious implications of judgements of irrationality for ethics and policy Bortolotti argues that we should adopt a more critical stance towards accepted standards of rationality in the light of the often surprising outcomes of philosophical inquiry and cognitive science research into decision making Irrationality is an accessible guide to the concept and will be essential reading for students and scholars interested in the limitations of human cognition and human agency
