**Network Science** National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Network Science for Future Army Applications, 2006-01-15 The military is currently attempting to develop itself into a force capable of networkcentric operations While this effort has highlighted the military's dependence on interacting networks it has also shown that there is a huge gap between what we need to know about networks and our fundamental knowledge about network behavior This gap makes the military vision of NCO problematic To help address this problem the Army asked the NRC to find out whether identifying and funding a new field of network science could help close this gap This report presents an examination of networks and the military an analysis of the promise content and challenges of network science and an assessment of approaches to creating value from network science

**Procurement Decisions in the Airline Industry** Tobias Rudeloff, 2009-11-03 Inhaltsangabe Introduction Over the last two decades real options analysis ROA has become a fundamental part of project evaluation Its increasing use in academia and corporations as well as its application to a wide range of industries make it a valuable tool in finance and accounting departments around the world Classical capital budgeting approaches like net present value NPV techniques do not account for additional flexibility and are therefore a very static measurement In addition to this a further core factor is the strategic aspect of the investment decision Companies often make decisions according to strategic reasons This raises the question of how the bargaining power is

divided between a seller and a buyer Furthermore the influence of the hold up problem on the two involved players is analyzed Finally the trade surplus of the investment is divided between the seller on the one hand and the buyer on the other hand using a game theoretic approach to model this relationship The airline industry is examined in this paper as it offers many possibilities to apply and explain the concepts of real options and bargaining in bilateral negotiations This paper sets out to analyze the value of flexibility of an investment decision and discusses in a second step how the strategic power between the two parties involved is allocated In academic literature limited research has been done to find out about the combination of a real options analysis and the distribution of the trade surplus between the different players involved This presents the following questions Does an option in terms of the purchase of an aircraft have additional value in comparison to a classical and inflexible buy now decision for an airline If this is the case how much is this value worth and how is the trade surplus distributed between the two parties involved Are there any hold up problems The following chapters will examine and answer these issues Chapter two deals with a literature review on standard real options analysis in general and the airline sector in particular In chapter three background information about the airline industry is given and it is stressed why this sector is used for the capital budgeting approach Chapter four covers the methodology that is used in chapter five In this chapter a case study involving the purchase decision of an aircraft is discussed using different methods to analyze the commit now and purchase

Perspectives on Strategic Risk Management Torben Juul Andersen, 2006 Operating across international markets is a highly turbulent affair that imposes real challenges on corporate risk management capabilities The multinational corporation is exposed to many diverse risks and exogenous influences beyond managerial control but also attain new strategic opportunities The exposures range from price volatilities changing macroeconomic conditions and operational disruptions to technological innovations competitive moves and socio political events Strategic risk management can reduce the adverse effects from these exposures but may also furnish gains from new opportunities This book relates to the need for effective strategic risk management practices that facilitate the ability to monitor essential exposures and respond appropriately to changing environmental conditions

Potyrailo, Eric J. Amis, 2012-12-06 This book edited by Potyrailo and Amis addresses a new paradigm shifting approach in the search for new materials Combinatorial Materials Science One way to consider such an approach is to imagine an adventurous chef who decides to look for new entrees by cooking food ingredients in many pots using different combinations in every pot and boil ing steaming or frying them in various ways Although most of the pots will not have the tastiest food ever devised some recipes will taste intriguing and some eventually will lead to a discovery of a new fascinating cuisine Of course having a skilled chef design the com binatorial formulation will certainly be helpful in ensuring a successful outcome Similar to food each engineering material is a complex product of its chemical composition structure and processing

Generally each of these components matters change one and you get another material Most of these new materials will be less good than ones we use now since existing materials have been refined with the extensive work of scientists and engineers At the same time if one prepares diverse materials like our adventurous chef changing material composition processing conditions and time etc some of these materials will be superior to existing ones and a few might represent breakout technology
