Ontology-Based Query Processing for Global Information Systems Eduardo Mena, Arantza Illarramendi, 2012-12-06 This work is a revision of the doctoral dissertation of Eduardo Mena presented to the Department of Computer Science and System Engineering at the University of Zaragoza Spain in November 1998 Mena 98 The OBSERVER system was developed as a result of this Ph D thesis This book is composed of eight chapters In Chapter 1 we introduce our rationale for writing a book about systems that process queries in global information systems Then in Chapter 2 we review the technological context for our work including distributed and heterogeneous environments and the use of ontologies We also compare related work to our own Chapter 3 presents our proposed global system architecture for query processing in global information systems The main modules in the architecture and the main steps given to process a query are briefly introduced

Chapters 4 through 7 provide a detailed description of each query processing step. In Chapter 4 we detail the steps needed to access the data corresponding to a query formulated over an ontology. All the aspects related to distribution, structural and semantic heterogeneity and restricted query capabilities of the underlying data repositories are considered in this chapter. The main features of the mapping information that relates ontologies and data repositories are also described. Finally we show the process of generating appropriate plans to access each involved repository and the correlation of the answers coming from different repositories.

The Philosophy of Kierkegaard George Pattison, 2015-01-28. Although the ideas of Søren Kierkegaard played a pivotal role in the shaping of mainstream German philosophy and the history of French existentialism, the question of how philosophers should read Kierkegaard is a difficult one to settle. His intransigent religiosity has led some philosophers to view him as essentially a religious thinker of a singularly anti-philosophical attitude who should be left to the theologians. In this major new survey of Kierkegaard's thought, George Pattison addresses this question head on and shows that although it would be difficult to claim a philosophy of Kierkegaard as one could a philosophy of Kant or of Hegel, there are nevertheless significant points of common interest between Kierkegaard's central thinking and the questions that concern philosophers today. The challenge of self-knowledge in an age of moral and intellectual uncertainty that lies at the heart of Kierkegaard's writings remains as important today as it did in the culture of post-Enlightenment modernity.
