**Great War, Total War** Roger Chickering, Stig Förster, 2000-09-11. The First World War was the first large scale industrialized military conflict in the world's history and it gave birth to the concept of total war. The essays in this 2000 volume analyse the experience of the war in light of this concept's implications in particular the systematic erosion of distinctions between the military and civilian spheres. With an emphasis on developments in Germany, France, Great Britain and the United States, leading scholars from Europe and North America locate the First World War along a trajectory that began in the wars of the middle of the nineteenth century and culminated in worldwide conflict in the middle of the twentieth. The essays explore the efforts of soldiers and statesmen, industrialists and financiers, professionals and civilian activists to adjust to the titanic pervasive pressures that the military stalemate on the western front imposed on belligerent and neutral societies.

*Machines as Agency* Christoph Lischka, Andrea Sick, 2015-07-15. This book supports and deepens the existing interfaces between art, science and technology, transgressing traditional principles and styles of research and selectively overcoming the side by side coexistence in favour of an integrated laboratory of the future. Instead of relying on traditional dualisms like nature/culture, subject/object as well as man and machine, heterogeneous networks with humans and non humans are opened in shared contexts of agency. New momentary propositions are developed meeting the complexity of discovering, exploring and inventing things, things which do not exist just as given beings. The artists and theoreticians can pursue using the tools and techniques of science actively not only to comment them but also to fathom their possibilities and employ them in their artistic and scientific projects. *Machines as Agency* is an artistic perspective.
