Oil and Colour Chemists Association of Australia St, 2013-03-09 Arising from an examination in 1969 of the education and training opportunities for paint industry technicians it was recognized that the various courses available at that time did not fully serve their needs While a few large companies had developed in house training arrangements the many medium and smaller firms in the raw material supply paint manufacturing or paint user industries were unable to provide their own comprehensive training programs With a view to improving this situation an advisory committee comprising representatives of the Australian Paint Manufacturers Federation and the Oil and Colour Chemists Association Australia was established to liaise directly with the New South Wales Department of Technical and Further Education As a result plans were developed for the introduction of a Special Course in Surface Coatings Technology in 1971 conducted by the Sydney Technical College The scope of the course was designed to cover all aspects of surface coatings technology ranging from raw materials and formulations to the production testing evaluation application and use of finished products The course proved to be highly successful and in 1973 a similar syllabus was introduced by the Melbourne School of Painting Decorating and Signcrafts in Victoria In 1980 New Zealand followed suit with a similar course conducted by the Auckland Technical Institute

A Handbook of Applied Biopolymer Technology Sanjay Kumar Sharma, Ackmez Mudhoo, 2011 Scientists are conducting active research in different fields of engineering science and technology by adopting the Green Chemistry Principles and methodologies to devise new processes with a view to help protect and ultimately save the environment from further anthropogenic interruptions and damage With this in mind the book provides an up to date coherently written and objectively presented set of chapters from eminent international researchers who are actively involved in academic and technological research in the synthesis bio degradation testing and applications of biodegradable polymers and biopolymers This pool of the latest ideas recent research and technological progress together with a high level of thinking with a comprehensive perspective makes the emerging field of biodegradable polymer science and engineering or bio based polymers linked to environmental sustainability the essence of this key publication The handbook consists of chapters written

and contributed by international experts from academia who are world leaders in research and technology in sustainability and biopolymer and biodegradable polymer synthesis characterisation testing and use The book highlights the following areas green polymers biopolymers and bionanocomposites biodegradable and injectable polymers biodegradable polyesters synthesis and physical properties discovery and characterization of biopolymers degradable bioelastomers lactic acid based biodegradable polymers enzymatic degradation of biodegradable polymers biodegradation of polymers in the composting environment recent development in biodegradable polymers research and applications and biodegradable foams The book is aimed at technical research orientated and marketing people in industry universities and institutions It will also be of value to the worldwide public interested in sustainability issues and biopolymer development as well as others interested in the practical means that are being used to reduce the environmental impacts of chemical processes and products to further eco efficiency and to advance the utilization of renewable resources for a bio based production and supplier chain Readers will gain a comprehensive and consolidated overview of the immense potential and ongoing research in bio based and biodegradable polymer science engineering and technology to make the world greener

Surface Coatings Oil and Colour Chemists' Association, 2012-12-06 Since Surface Coatings first appeared in 1974 the industry has undergone dramatic and rapid changes both in direction and emphasis and this new edition mirrors these changes Volume I includes coverage of aqueous systems with chapters on emulsions and aqueous resins as well as providing an excellent introduction to polymer science pigments solvents and additives

Monomers, Polymers and Composites from Renewable Resources Mohamed Naceur Belgacem, Alessandro Gandini, 2011-10-10 The progressive dwindling of fossil resources coupled with the drastic increase in oil prices have sparked a feverish activity in search of alternatives based on renewable resources for the production of energy Given the predominance of petroleum and carbon based chemistry for the manufacture of organic chemical commodities a similar preoccupation has recently generated numerous initiatives aimed at replacing these fossil sources with renewable counterparts In particular major efforts are being conducted in the field of polymer science and technology to prepare macromolecular materials based on renewable resources The concept of the bio refinery viz the rational exploitation of the vegetable biomass in terms of the separation of its components and their utilisation as such or after suitable chemical modifications is thus gaining momentum and considerable financial backing from both the public and private sectors This collection of chapters each one written by internationally recognised experts in the corresponding field covers in a comprehensive fashion all the major aspects related to the synthesis characterization and properties of macromolecular materials prepared using renewable resources as such or after appropriate modifications Thus monomers such as terpenes and furans oligomers like rosin and tannins and polymers ranging from cellulose to proteins and including macromolecules synthesized by microbes are discussed with the purpose of showing the extraordinary variety of materials that can be prepared from their intelligent exploitation Particular emphasis has been placed on recent advances and

imminent perspectives given the incessantly growing interest that this area is experiencing in both the scientific and technological realms Discusses bio refining with explicit application to materials Replete with examples of applications of the concept of sustainable development Presents an impressive variety of novel macromolecular materials

Reactive and Functional Polymers Volume One Tomy J. Gutiérrez,2020-08-25 Reactive and functional polymers are manufactured with the aim of improving the performance of unmodified polymers or providing functionality for different applications These polymers are created mainly through chemical reactions but there are other important modifications that can be carried out by physical alterations in order to obtain reactive and functional polymers This volume presents a comprehensive analysis of these reactive and functional polymers Reactive and Functional Polymers Volume One provides the principles and foundations for the design development manufacture and processing of reactive and functional polymers based primarily on biopolymers polyesters and polyurethanes The text provides an in depth review of updated sources on reactive resins and silicones In this book world renowned researchers have participated including Dr Runcang Sun Associate editor for the journal Carbohydrate Polymers With its comprehensive scope and up to date coverage of issues and trends in Reactive and Functional Polymers this is an outstanding book for students professors researchers and industrialists working in the field of polymers and plastic materials
