1 Introduction

In this paper, we consider nonlinear resistive networks in the framework of modular sequence spaces, introduced by De Michele and Soardi [7] and successively studied by Soardi [23, 24]. The preceding paper [15] is devoted to developing a potential theory on the networks and the study is continued in this paper to deal with Dirichlet boundary value problems for solutions of Poisson equations on Royden type boundaries.

A network consists of a finite or countably infinite, locally finite, connected graph $G = (V, E)$ whose oriented edges $[x, y] \in E^o$ ($x, y \in V$) are assigned a relation

$$v([x, y]) = r_{[x, y]}(I([x, y]))$$

between the voltage $v([x, y])$ and the current $I([x, y])$ flowing in $[x, y]$. The resistance functions $r_{[x, y]}$ for (non-oriented) edges $[x, y] \in E$ are assumed to be continuous, odd, strictly increasing and infinite at infinity. Moreover they are required to satisfy a uniform variation condition which will be specified in Sect. 2. The network is energized
