From Model-Driven Design to Resource Management for Distributed Embedded Systems Bernd Kleinjohann, Lisa Kleinjohann, Ricardo J. Machado, Carlos Pereira, P.S. Thiagarajan, 2007-01-29. Embedded computing systems have started to carry out the key control functions in diverse domains such as telecommunications, automotive electronics, avionics and even complete industrial manufacturing lines. Traditionally such embedded control systems have been implemented in a monolithic centralized manner. However, distributed and parallel solutions have been steadily gaining popularity. In a distributed setup, the control task is carried out by a number of controllers distributed over the entire system and interconnected as a network by communication components such as field buses. More demanding local control applications require controllers based on parallel architectures or processors with dedicated co-processors. Distribution and parallelism in embedded system design increase the engineering challenges and demand new development methods and tools. *From Model Driven Design to Resource Management for Distributed Embedded Systems* contains 16 original contributions as well as 12 invited papers by distinguished invited speakers. These papers were presented at the Working Conference on Distributed and Parallel Embedded Systems DIPES 2006 which was held in October 2006 in Braga, Portugal and sponsored by the International Federation for Information Processing (IFIP). This volume covers the following very timely topics: model driven design, test and evolution of embedded systems, timing analysis and predictability, scheduling, allocation, communication and resource management in distributed real-time systems. Network and Parallel Computing Hai Jin, Guangrong Gao, Zhiwei Xu, Hao Chen, 2004-10-14. This proceedings contains the papers presented at the 2004 IFIP International Conference on Network and Parallel Computing NPC 2004 held at Wuhan, China from October 18 to 20, 2004. The goal of the conference was to establish an international forum for engineers and scientists to present their ideas and experiences in network and parallel computing. A total of 338 submissions were received in response to the call for papers. These papers were from Australia, Brazil, Canada, China, Finland, France, Germany, Hong Kong, India, Iran, Italy, Japan, Korea, Luxemburg, Malaysia, Norway, Spain, Sweden, Taiwan, UK and USA. Each submission was sent to at least three reviewers. Each paper was judged according to its originality, innovation, readability and relevance to the expected audience. Based on the reviews received, a total of 69 papers were accepted to be included in the proceedings. Among the 69 papers, 46 were accepted as full papers and were presented at the conference.

We also accepted 23 papers as short papers each of these papers was given an opportunity to have a brief presentation at the conference followed by discussions in a poster session. Thus due to the limited scope and time of the conference and the high number of submissions received only 20% of the total submissions were included in the final program.

Intelligence in Services and Networks. Paving the Way for an Open Service Market Han Zuidweg, Mario Campolargo, Jaime Delgado, Al Mullery, 1999-04-16
Paving the Way for an Open Service Market. We live in an age when powerful communications technology is becoming available to everyone. From our home we can send and receive not only analogue voice but also growing volumes of digital information and even intelligence in the form of agents. We are becoming increasingly mobile and are expecting the same level of connectivity in the home, in the office and on the road. The regulatory and commercial environment in which we communicate is changing. The telecommunications market is becoming increasingly competitive. The Internet is erasing the borders between information technology and telecommunications. And the way we do business is ever more dominated by electronic exchanges of information. Is our technology ready for the open market of networks and services? Can we manage the growing complexity of computing and telecommunications technology and place it at the service of the people? The challenge for the research community is to develop the tools and techniques that will ultimately bring the full power of communications and information to everyone in a way that everyone can easily use. The Sixth International Conference on Intelligence in Services and Networks IS N 99 is all about technology for paving the way to the open services market. Since the first IS N conference in 1992 the focus of the IS N program has continually shifted. We see existing technologies maturing while new ones emerge but the bottom line has always been putting technology at the service of the people.
