Abstract

We prove that for positive integers $m \geq 1$, $n \geq 1$ and a prime number $p \neq 2, 3$ there are finitely many finite m -generated Moufang loops of exponent p^n .

2020 Mathematics Subject Classification: 20N05 (Primary); 17D10 (Secondary)

1. Introduction

A loop U is called a *Moufang loop* if it satisfies the following identities:

$$((zx)y)x = z((xy)x) \text{ and } x(y(xz)) = (x(yx))z.$$

In this paper we solve the restricted Burnside problem for Moufang loops of exponent p^n , $p > 3$,

THEOREM 1. *For an arbitrary prime power p^n , $p > 3$, there exists a function $f(m)$ such that any finite m -generated Moufang loop of exponent p^n has order $< f(m)$.*

For groups this assertion was proved by E. Zelmanov ([20, 21]). For Moufang loops of prime exponent it was proved by A. Grishkov [6] (if $p \neq 3$) and G. Nagy [15] (if $p = 3$).

Restricted Burnside Problem:

The Restricted Burnside Problem Michael Vaughan-Lee, 1990 In 1902 William Burnside wrote A still undecided point in the theory of discontinuous groups is whether the order of a group may not be finite while the order of every operation it contains is finite Since then the Burnside problem in different guises has inspired a considerable amount of research One variant of the Burnside problem the restricted Burnside problem asks whether for a given r and n there is a bound on the orders of finite r generator groups of exponent n This book provides the first comprehensive account of the many recent results in this area By making extensive use of Lie ring techniques it allows a uniform treatment of the field and includes Kostrikin's theorem for groups of prime exponent as well as detailed information on groups of small 3 4 5 6 7 8 9 exponent The treatment is intended to be self contained and as such will be an invaluable introduction for postgraduate students and research workers Included are extensive details of the use of computer algebra to verify computations [The Restricted](#)

Kostrikin, 2012-12-06 Perhaps it is not inappropriate for me to begin with the comment that this book has been an interesting challenge to the translator It is most unusual in a text of this type in that the style is racy with many literary allusions and witticisms not the easiest to translate but a source of inspiration to continue through material that could daunt by its combinatorial complexity Moreover there have been many changes to the text during the translating period reflecting the ferment that the subject of the restricted Burnside problem is passing through at present I concur with Professor Kostrikin's Note in Proof where he describes the book as fortunate I would put it slightly differently its appearance has surely been partly instrumental in inspiring much endeavour including such things as the paper of A I Adian and A A Razborov producing the first published recursive upper bound for the order of the universal finite group $B(d, p)$ of prime exponent the English version contains a different treatment of this result due to E I Zelmanov M R Vaughan Lee's new approach to the subject and finally the crowning achievement of Zelmanov in establishing RBP for all prime power exponents thereby via the classification theorem for finite simple groups and Hall Higman settling it for all exponents The book is encyclopaedic in its coverage of facts and problems on RBP and will continue to have an important influence in the area **Proceedings of the International Conference on Algebra 2010** Wanida Hemakul, Sri Wahyuni, Polly Wee
