Rethinking Human Adaptation Biological And Cultural Models:

Rethinking Human Adaptation Rada Dyson-hudson, Michael A. Little, Eric Alden Smith, 2019-06-26 Most anthropologists agree that a comprehension of adaptation and adaptive processes is central to an understanding of human biological and behavioural systems. However, there is little agreement among archaeologists, cultural anthropologists and human biologists as to what adaptation means and how it should be analyzed. Because of this lack of a common underlying theory, method and perspective, the subdisciplines have tended to move apart and anthropology is no longer the integrated science envisaged at its inception in the nineteenth century. In this book, the authors, both biological and cultural anthropologists, use a common theoretical framework based on recent evolutionary, ecological and anthropological theory in their analyses of biological and social adaptive systems. Although a synthesis of the subdisciplines of anthropology lies somewhere in the future, the original essays in this volume are a first attempt at a unified perspective. **Human Adaptive**

Strategies Daniel Bates, Judith Tucker, Ludomir Lozny, 2023-05-31 This book introduces students to cultural anthropology with an emphasis on environmental and evolutionary approaches focusing on how humans adapt to their environment and how the environment shapes culture. It shows how cultures evolve within the context of people's strategies for surviving and thriving in their environments. This approach is widely used among scholars as a cross-disciplinary tool that rewards students with valuable insights into contemporary developments. Drawing on anthropological case studies, the authors address immediate human concerns such as the costs and consequences of human energy requirements, environmental change and degradation, population pressure, social and economic equity and planned and unplanned change. Impacts of increasingly rapid climatic change on equitable access to resources and issues of human rights are discussed throughout. Towards the end of the book, the student is drawn into a challenging thought experiment addressing the possible impacts of climatic warming on Middle America in the year 2040. All chapters conclude with Summary, Key Terms and Suggested Readings. This book is an ideal text for students of introductory anthropology and archaeology, environmental studies, world history and human and cultural ecology courses. **Routledge Library Editions: Security and Society** Various, 2021-09-30 This 12-volume set contains titles originally published between 1934 and 1995. An eclectic mix of titles, this collection draws from anthropology, economics, ethics, politics, psychology and sociology. Exploring security in both war and peacetime, it includes volumes looking at the causes of war and its effect on society as a whole, the soldiers themselves and their place in society, the portrayal of war in the press, both in words and photographs and the politics behind them. **Evolutionary Ecology and Human Behavior** Eric Alden Smith, 2017-09-29 required reading for anyone interested in the economy, ecology and demography of human societies. *American Journal of Human Biology*. This excellent book can serve both as a textbook and as a scholarly reference.

Building a New Biocultural Synthesis Alan H. Goodman, Thomas Leland Leatherman, 2010-03-23 Anthropology with its dual emphasis on biology and culture is or should be the discipline most suited to the study of the

complex interactions between these aspects of our lives Unfortunately since the early decades of this century biological and cultural anthropology have grown distinct and a holistic vision of anthropology has suffered This book brings culture and biology back together in new and refreshing ways Directly addressing earlier criticisms of biological anthropology Building a New Biocultural Synthesis concerns how culture and political economy affect human biology e g people s nutritional status the spread of disease exposure to pollution and how biological consequences might then have further effects on cultural social and economic systems Contributors to the volume offer case studies on health nutrition and violence among prehistoric and historical peoples in the Americas theoretical chapters on nonracial approaches to human variation and the development of critical humanistic and political ecological approaches in biocultural anthropology and explorations of biological conditions in contemporary societies in relationship to global changes Building a New Biocultural Synthesis will sharpen and enrich the relevance of anthropology for understanding a wide variety of struggles to cope with and combat persistent human suffering It should appeal to all anthropologists and be of interest to sister disciplines such as nutrition and sociology Alan H Goodman is Professor of Anthropology Hampshire College Thomas L Leatherman is Associate Professor of Anthropology University of South Carolina

Sexual Selection in Homo sapiens Menelaos Apostolou, 2017-06-20 The present book aims to examine how sexual selection works in the human species Almost all scholarly effort focuses on sexual selection in non human species and extrapolates the findings to the human one However human mating has a unique pattern not found in any other species namely parental influence over mate choice Across preindustrial societies the typical pattern of long term mating is arranged marriage where parents choose spouses for their children By doing so parents effectively become a sexual selection force Traits that enhance an individual s chance to be selected as a son or a daughter in law confer important reproductive advantages to those who are endowed with them increasing in frequency in the population The author has coined the term parental choice to describe the sexual selection force that arises from parental control over mating He synthesizes extensive theoretical and empirical work in order to understand and model this force The aim is to understand which factors give rise to parental choice and to combine these insights into constructing a more formal model It also aims to further examine whether the predictions of the model fit the patterns of mating found across different types of human societies and how the model can be used to understand the evolution of behavioral traits involved in mating By synthesizing the various arguments put forward and published across the literature the book offers a comprehensive argument and overview of an aspect of sexual selection unique to our species Furthermore the book revises and extends previously made arguments and models while it provides useful insights on how the proposed revision of sexual selection theory can enable us to understand a wide range of human behavioral phenomena It should be key reading for those interested in studying sexual selection in general and in the Homo sapiens species in particular
