Waring,2012-12-06 Many of the most effective treatments for disease have been discovered empir ically Nowadays however we think that understanding the biology of a disease will lead us to design better treatments and to improve the application of treatments we already have To accomplish this vast sums are expended on cancer research Even so to the casual observer of clinical oncology the proliferation of studies and trials of ever different combinations of therapies looks like empiricism at the best In the first part of this book we have asked practising clinicians in different specialities to assess the contributions of biology and of empiricism to current approaches to treatment In the second part we have asked researchers in different areas of biology applied to cancer to assess the present and likely future impact of their type of biology on cancer treatment and control IX 1 Surgery M BAUM OBJECTIVES OF CANCER TREATMENT The objectives of cancer treatment can be defined according to population requirements or according to the needs of the individual As far as the population is concerned Government authorities are entitled to expect that cancer treatment will lead to mortality reductions and cost containment *Cytokines and Cancer* Leonidas C. Platanias,2006-05-06 Dramatic advances have occurred over the last few years in the research field of cancer biology There has been a constant accumulation of important new information resulting in a gradual transformation on the perceptions that exist among scientists regarding mechanisms by which the malignant phenotype develops The recent developments in cancer research have also had a substantial impact in efforts towards the development of new cancer therapies One of the most explosive and rapidly advancing research areas has been the area of cytokines and cancer Many perceptions have changed from the original discovery decades ago of the interferon to the current state of the art cytokine research It is now well recognized that many cytokines play important roles in normal cellular functions while some of them have prominent roles in the pathophysiology of cancer It is also now firmly established that several cytokines promote the growth of cancer cells while others act as suppressors of malignant cell proliferation The importance of the cytokine signaling field in cancer is reflected by the development of multiple treatments that have been introduced in clinical oncology over the last few years Understanding the physiological functions of cytokines as well as their precise roles in the pathogenesis of certain malignancies is extremely important in the current clinical era **Nutritional Management of Cancer Treatment Effects** Nagi B. Kumar,2012-02-16 Malnutrition and its related symptoms are both frequent and deleterious effects of cancer

treatment Despite the importance of targeted nutritional interventions in ameliorating these effects however publications providing up to date information on novel nutritional approaches and strategies are lacking This book is intended to fill the void by describing and evaluating in detail the nutritional strategies that may be employed to alleviate a wide variety of cancer treatment effects The guidance provided will help to improve the survival and quality of life of cancer patients and has the potential to dramatically affect how evidence based clinical practice is established and improved over the coming decade The author is a distinguished expert in the field who has more than 25 years of experience in oncology nutrition and has been involved in establishing and implementing a Clinical Nutrition Oncology Program Role of Cytokines in Cancer Treatment
