Sensations A Defense Of Type Materialism:

Sensations Christopher S. Hill, 1991-01-25 This is a book about sensory states and their apparent characteristics It confronts a whole series of metaphysical and epistemological questions and presents an argument for type materialism the view that sensory states are identical with the neural states with which they are correlated According to type materialism sensations are only possessed by human beings and members of related biological species silicon based androids cannot have sensations The author rebuts several other rival theories dualism double aspect theory eliminative materialism functionalism and explores a number of important issues the forms and limits of introspective awareness of sensations the semantic properties of sensory concepts knowledge of other minds and unity of consciousness The book is a significant contribution to the philosophy of mind and has much to say to psychologists and cognitive scientists

Skepticism About the External World Panayot Butchvarov, 1998-05-21 Do we know or even have evidence that external material objects exist Drawing powerfully on techniques from both analytic and continental philosophy Butchvarov offers a strikingly original approach to this perennial issue He argues that only a direct realist view of perception the view that in perception we are directly aware of material objects has any hope of providing a compelling response to the skeptic The seemingly insuperable problem for direct realism has always been to explain hallucination dreaming and other situations where the object of awareness is not a really existing physical object This has led many philosophers to adopt views in which perceptual consciousness involves a subjective state that is the direct object of awareness Butchvarov argues persuasively that all such views are helpless in the face of the skeptic's arguments His radical innovation is to insist that the direct object of perceptual and even dreaming and hallucinatory experience is usually a material object but not necessarily one that actually exists This leads to a sophisticated metaphysics in which reality is ultimately constructed by human decisions out of objects that are ontologically more basic but which cannot be said in themselves to be either real or unreal Butchvarov's ingenious approach to a longstanding philosophical issue as well as the extensive range of his references to traditional and contemporary discussions of the topic makes *Skepticism about the External World* a thrilling and essential book for philosophers and philosophically minded readers

Philosophy of Mind Jaegwon Kim, 2011-04 The philosophy of mind has long been part of the core philosophy curriculum and this book is the classic comprehensive survey of the subject Designed as an introduction to the field for upper level undergraduates and graduate students *Philosophy of Mind* focuses on the mind body problem and related issues some touching on the status of psychology and cognitive science The third edition has been thoroughly updated throughout to reflect developments of the past decade and it is the only text of its kind that provides a serious and respectful treatment of substance dualism This edition also includes two new chapters on the nature of consciousness and the status of consciousness Improved readability and clarity has been one important aim of the new edition Throughout the text author Jaegwon Kim allows readers to come to their own terms with the central problems of the mind At the same time Kim's own

emerging views are on display and serve to move the discussion forward Comprehensive clear and fair Philosophy of Mind is a model of philosophical exposition and a significant contribution to the field The Oxford Companion to Consciousness Tim Bayne,Axel Cleeremans,Patrick Wilken,2014-02-27 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain s activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon *Identifying the Mind* the late U. T. Place,2004-01-15 This is the one and only book by the pioneer of the identity theory of mind The collection focuses on Place s philosophy of mind and his contributions to neighboring issues in metaphysics and epistemology It includes an autobiographical essay as well as a recent paper on the function and neural location of consciousness **Contemporary Debates in Philosophy of Mind** Brian P. McLaughlin,Jonathan Cohen,2023-01-31 A timely collection of debates concerning the major themes and topics in philosophy of mind fully updated with new topics covering the latest developments in the field Contemporary Debates in Philosophy of Mind provides a lively and engaging introduction to the conceptual background ongoing debates and contentious issues in the field today Original essays by more than 30 of the discipline s most influential thinkers offer opposing perspectives on a series of contested questions regarding mental content physicalism the place of consciousness in the physical world and the nature of perception and mental capacities Written to appeal to non specialists and professional philosophers alike the second edition of Contemporary Debates in Philosophy of Mind features five entirely new debates on the relation between

perception and cognition whether pain is a natural kind whether perception is best understood through representational content or direct contact with the world whether we need imagination that goes beyond imagery and supposition and whether perceptual contents are general particular or a hybrid Presents 15 sets of specially commissioned essays with opposing viewpoints on central topics in philosophy of mind Offers head to head debates on central topics such as consciousness intentionality normativity mental causation materialism and perception Provides a dynamic view of contemporary thinking about fundamental and controversial issues Includes a thorough introduction providing a comprehensive background to the issues explored in each debate Part of Wiley Blackwell's acclaimed Contemporary Debates in Philosophy series Contemporary Debates in Philosophy of Mind Second Edition is essential reading for undergraduate and graduate students academics professional philosophers and sophisticated general readers with an interest in the subject

Psychiatry and Neuroscience Update Pascual Ángel Gargiulo, Humberto Luis Mesones Arroyo, 2018-11-28 This broad and thought provoking volume provides an overview of recent intellectual and scientific advances that bridge the gap between psychiatry and neuroscience offering a wide range of penetrating insights in both disciplines The third volume on the topic in the last several years from a varying panel of international experts this title identifies the borders trends and implications in both fields today and goes beyond that into related disciplines to seek out connections and influences Similar to its two Update book predecessors Psychiatry and Neuroscience Volume III presents the current state of the art in the main disciplines psychiatry and neuroscience and attempts to provide deeper comprehension or explication of the normal and diseased human mind its biological correlates and its biographical and existential implications This engaging volume continues the previous style of exploring different disciplines and trying to integrate disciplinary evidence from varying points of view in an organic manner Developed for clinicians and researchers in the fields of medicine psychiatry psychology and biology this third volume also will be of great interest to students and university professors of diverse disciplines The Blackwell Companion to Consciousness Susan Schneider, Max Velmans, 2017-03-16 Updated and revised the highly anticipated second edition of The Blackwell Companion to Consciousness offers a collection of readings that together represent the most thorough and comprehensive survey of the nature of consciousness available today Features updates to scientific chapters reflecting the latest research in the field Includes 18 new theoretical empirical and methodological chapters covering integrated information theory renewed interest in panpsychism and more Covers a wide array of topics that include the origins and extent of consciousness various consciousness experiences such as meditation and drug induced states and the neuroscience of consciousness Presents 54 peer reviewed chapters written by leading experts in the study of consciousness from across a variety of academic disciplines **An Introduction to Philosophical Methods** Christopher Daly, 2010-07-20 An Introduction to Philosophical Methods is the first book to survey the various methods that philosophers use to support their views Rigorous yet accessible the book introduces and illustrates the methodological considerations that

are involved in current philosophical debates Where there is controversy the book presents the case for each side but highlights where the key difficulties with them lie While eminently student friendly the book makes an important contribution to the debate regarding the acceptability of the various philosophical methods and so it will also be of interest to more experienced philosophers

New Perspectives on Type Identity Simone Gozzano, Christopher S. Hill, 2012-03-08 The type identity theory according to which types of mental state are identical to types of physical state fell out of favour for some years but is now being considered with renewed interest Many philosophers are critically re examining the arguments which were marshalled against it finding in the type identity theory both resources to strengthen a comprehensive physicalistic metaphysics and a useful tool in understanding the relationship between developments in psychology and new results in neuroscience This volume brings together leading philosophers of mind whose essays challenge in new ways the standard objections to type identity theory such as the multiple realizability objection and the modal argument Other essays show how cognitive science and neuroscience are lending new support to type identity theory and still others provide extend and improve traditional arguments concerning the theory's explanatory power

Philosophy of Mind in the Twentieth and Twenty-First Centuries Amy Kind, 2018-07-06 While the philosophical study of mind has always required philosophers to attend to the scientific developments of their day from the twentieth century onwards it has been especially influenced and informed by psychology neuroscience and computer science Philosophy of Mind in the Twentieth and Twenty First Centuries provides an outstanding survey of the most prominent themes in twentieth century and contemporary philosophy of mind It also looks to the future offering cautious predictions about developments in the field in the years to come Following an introduction by Amy Kind twelve specially commissioned chapters by an international team of contributors discuss key topics thinkers and debates including the phenomenological tradition the mind body problem theories of consciousness theories of perception theories of personal identity mental causation intentionality Wittgenstein and his legacy cognitive science and future directions for philosophy of mind Essential reading for students and researchers in philosophy of mind and philosophy of psychology Philosophy of Mind in the Twentieth and Twenty First Centuries is also a valuable resource for those in related disciplines such as psychology and cognitive science

The Routledge Dictionary of Philosophy Michael Proudfoot, A.R. Lacey, 2009-12-04 First published in 1976 the Dictionary of Philosophy has established itself as the best available text of its kind explaining often unfamiliar complicated and diverse terminology Thoroughly revised and expanded this fourth edition provides authoritative and rigorous definitions of a broad range of philosophical concepts Concentrating on the Western philosophical tradition The Routledge Dictionary of Philosophy offers an illuminating and informed introduction to the central issues ideas and perspectives in core fields such as metaphysics epistemology and logic It includes concise biographical entries for more than one hundred major philosophers from Plato and Aristotle through to contemporary figures such as Dummett McDowell Parfit and Singer All major entries are followed by helpful suggestions for further reading including web

links and contain extensive cross referencing to aid access and comprehension This edition also features a brand new guide to the most useful philosophy sites on the internet The Routledge Dictionary of Philosophy is an invaluable and up to date resource for all students of philosophy The Conscious Mind David J. Chalmers,1997 Writing in a rigorous thought provoking style the author takes us on a far reaching tour through the philosophical ramifications of consciousness offering provocative insights into the relationship between mind and brain *The Multiple Realization Book* Thomas W. Polger, Lawrence A. Shapiro,2016-09-02 Since Hilary Putnam offered multiple realization as an empirical hypothesis in the 1960s philosophical consensus has turned against the idea that mental processes could be identified with brain processes and multiple realization has become the keystone of the antireductive consensus across philosophy of science broadly Thomas W Polger and Lawrence A Shapiro offer the first book length investigation of multiple realization Their analysis of multiple realization serves as a starting point to a series of philosophically sophisticated and empirically informed arguments that cast doubt on the generality of multiple realization in the cognitive sciences In the course of making their case they respond to classic defenses of multiple realization that Jerry Fodor Ned Block and other prominent philosophers of psychology have offered Polger and Shapiro conclude that the identity theory once left for dead remains a viable theory of mind one that when suitably framed enjoys the benefits typically thought to accrue only to theories of mind that presuppose the truth of multiple realization As Polger and Shapiro see matters mind brain identities have played an important role in the growth and achievements of the cognitive sciences and they see little prospect or need for multiple realization in an empirically based theory of mind This leads Polger and Shapiro to offer an alternative framework for understanding explanations in the cognitive sciences as well as in chemistry biology and other non basic sciences Physicalism and Mental Causation Sven Walter, Heinz-Dieter Heckmann,2015-11-04 Physicalism the thesis that everything there is in the world including our minds is constituted by basic physical entities has dominated the philosophy of mind during the last few decades But although the conceptual foundations of the physicalist agenda including a proper explication of notions such as causation determination realization or even physicalism itself must be settled before more specific problems e g the problems of mental causation and human agency can be satisfactorily addressed a comprehensive philosophical reflection on the relationships between the various key concepts of the debate on physicalism is yet missing This book presents a range of essays on the conceptual foundations of physicalism mental causation and human agency written by established and leading authors in the field **Dictionary of Philosophy** Alan Lacey,2002-09-11 Providing an illuminating and informed introduction to central philosophical issues concepts and perspectives in the core fields of metaphysics epistemology and philosophical logic the Dictionary takes the most common terms and notions and clarifies what they mean to the philosopher and what sort of problems the philosopher finds associated with them Thoroughly revised and updated the bibliographies supply core reading lists and each entry uses extensive cross referencing to related themes and concepts to provide a greater

sense of access control and comprehension The Dictionary will also provide those working in proximate fields with an understanding of areas of overlapping interest concepts of common applicability and the full range and diversity of philosophical analysis and insight

Oxford Studies in Philosophy of Mind Uriah Kriegel, 2024-09-21 Oxford Studies in Philosophy of Mind presents cutting edge work in the philosophy of mind combining invited articles and articles selected from submissions Each volume will highlight two themes to bring focus to debates The series will reflect the diversity of methods adopted in contemporary philosophy of mind and provide a venue for rigorous and innovative work by both established and up and coming voices in the field The themes covered in the fourth volume are twenty first century idealism acquaintance and perception and acquaintance and consciousness It also contains a book symposium on David Chalmers Reality and an article on Aristotle s philosophy of mind

Natural Minds Thomas W. Polger, 2006-01-20 In Natural Minds Thomas Polger advocates and defends the philosophical theory that mind equals brain that sensations are brain processes and in doing so brings the mind brain identity theory back into the philosophical debate about consciousness The version of identity theory that Polger advocates holds that conscious processes events states or properties are type identical to biological processes events states or properties a tough minded account that maintains that minds are necessarily identical to brains a position held by few current identity theorists Polger s approach to what William James called the great blooming buzzing confusion of consciousness begins with the idea that we need to know more about brains in order to understand consciousness fully but recognizes that biology alone cannot provide the entire explanation Natural Minds takes on issues from philosophy of mind philosophy of science and metaphysics moving freely among them in its discussion Polger begins by answering two major objections to identity theory Hilary Putnam s argument from multiple realizability which discounts identity theory because creatures with brains unlike ours could also have mental states and Saul Kripke s modal argument against mind brain identity based on the apparent contingency of the identity statement He then offers a detailed account of functionalism and functional realization which offer the most serious obstacle to consideration of identity theory Polger argues that identity theory can itself satisfy the kind of explanatory demands that are often believed to favor functionalism

World Without Design Michael C. Rea, 2002-08-01 Philosophical naturalism according to which philosophy is continuous with the natural sciences has dominated the Western academy for well over a century but Michael Rea claims that it is without rational foundation and that the costs of embracing it are surprisingly high The first part of World Without Design aims to provide a fair and historically informed characterization of naturalism Rea then argues compellingly to the surprising conclusion that naturalists are committed to rejecting realism about material objects materialism and perhaps realism about other minds This conclusion is striking largely because naturalism is often simply identified with materialism and the remaining two theses are ones that naturalists very typically want to endorse Rea goes on to examine two alternative research programs intuitionism and supernaturalism and argues for the conclusion that intuitionism under certain

circumstances is self defeating World Without Design offers a provocative challenge to philosophical orthodoxy It will make uncomfortable reading for many philosophers **Brute Facts** Elly Vintiadis,Constantinos Mekios,2018 Brute facts are facts that don t have explanations They are instrumental in our attempts to give accounts of other facts or phenomena and so they play a key role in many philosophers views about the structure of the world This volume explores neglected questions about the nature of brute facts and their explanatory role
