The World of the Senses Rudolf Steiner, 2014-09-04 When we consider the plant world in all its greenery or the stars with their golden glory when we look at all this without forming any judgement from within ourselves but instead permit the things to reveal themselves to us then all things are transformed from what they were in the world of the senses into something entirely different something for which no word exists other than one which is taken from our very life of soul Rudolf Steiner One of Rudolf Steiner's most fundamental objectives was to show how the spiritual world connects to and penetrates the material world In doing so he was pioneering a modern form of Rosicrucianism countering traditional religious conceptions that spirit and matter are polar opposites as well as contemporary materialistic science that ignores the existence of spiritual phenomena altogether In this concise series of lectures Rudolf Steiner shows how the human senses reveal the mysterious world of the will which is at once a spiritual and physical phenomenon The senses act as a portal connecting our physical and etheric bodies with what Steiner refers to as worlds of all pervading will and all pervading wisdom He elaborates this theme giving some unexpected and delightful insights into the senses of hearing and sight and in particular how we experience colour Steiner suggests that divine spiritual beings had different intentions for the formation of physical human beings but that adversary powers caused disruption leading to a more materialized constitution He describes disorders in the connections between the human physical etheric astral and ego bodies and the ill effects of one aspect overpowering the others He gives insight into human glandular secretions and why we need to eat and digest also connected to the intervention of adversary beings Among the many other themes tackled here Rudolf Steiner describes the transformation of the human senses and organs giving special consideration to the function of the larynx which in future times will develop a special kind of reproductive power

Man and the Universe Oliver Lodge, 2016-02-12 Originally published in 1908 Lodge applies his background in physics to the study of Christian Theology He aims to reconcile religious doctrine to scientific theory calling for a re interpretation of biblical texts to allow for the integration of science while simultaneously making a case for the acceptance of miracles in the scientific community This title will be of interest to students of Religious Studies as well as to general readers interested in problems of existence

The Non-Local Universe Robert Nadeau, Menas Kafatos, 2001-05-31 Classical physics states that physical reality is local a point in space cannot influence another point beyond a relatively short distance However In 1997 experiments were conducted in which light particles photons originated under certain conditions and traveled in opposite directions to detectors located about seven miles apart The amazing results indicated that the photons interacted or

communicated with one another instantly or in no time Since a distance of seven miles is quite vast in quantum physics this led physicists to an extraordinary conclusion even if experiments could somehow be conducted in which the distance between the detectors was half way across the known universe the results would indicate that interaction or communication between the photons would be instantaneous What was revealed in these little known experiments in 1997 is that physical reality is non local a discovery that Robert Nadeau and Menas Kafatos view as the most momentous in the history of science In *The Non Local Universe* Nadeau and Kafatos offer a revolutionary look at the breathtaking implications of non locality They argue that since every particle in the universe has been entangled with other particles like the two photons in the 1997 experiments physical reality on the most basic level is an undivided wholeness In addition to demonstrating that physical processes are vastly interdependent and interactive they also show that more complex systems in both physics and biology display emergent properties and or behaviors that cannot be explained in the terms of the sum of parts One of the most startling implications of non locality in human terms claim the authors is that there is no longer any basis for believing in the stark division between mind and world that has preoccupied much of western thought since the seventeenth century And they also make a convincing case that human consciousness can now be viewed as emergent from and seamlessly connected with the entire cosmos In pursuing this groundbreaking argument the authors not only provide a fascinating history of developments that led to the discovery of non locality and the sometimes heated debate between the great scientists responsible for these discoveries They also argue that advances in scientific knowledge have further eroded the boundaries between physics and biology and that recent studies on the evolution of the human brain suggest that the logical foundations of mathematics and ordinary language are much more similar than we previously imagined What this new knowledge reveals the authors conclude is that the connection between mind and nature is far more intimate than we previously dared to imagine What they offer is a revolutionary look at the implications of non locality implications that reach deep into that most intimate aspect of humanity consciousness

Hidden Heart of the Cosmos Swimme, Brian Thomas ,2019-10-24 First published in 1996 *Hidden Heart of the Cosmos* sought to answer the question What does it mean to be human to live on planet Earth in the universe as it is now understood In this new and updated edition bestselling author and evolutionary cosmologist Brian Thomas Swimme takes us on a journey through the cosmos in search of the new story that is developing in response to this age old question Publisher

The Emergence of a Scientific Culture Stephen Gaukroger,2008-10-23 Why did science emerge in the West and how did scientific values come to be regarded as the yardstick for all other forms of knowledge Stephen Gaukroger shows just how bitterly the cognitive and cultural standing of science was contested in its early development Rejecting the traditional picture of secularization he argues that science in the seventeenth century emerged not in opposition to religion but rather was in many respects driven by it Moreover science did not present a unified picture of nature but was an unstable field of different often locally successful but just as often incompatible programmes To

complicate matters much depended on attempts to reshape the persona of the natural philosopher and distinctive new notions of objectivity and impartiality were imported into natural philosophy changing its character radically by redefining the qualities of its practitioners The West's sense of itself its relation to its past and its sense of its future have been profoundly altered since the seventeenth century as cognitive values generally have gradually come to be shaped around scientific ones Science has not merely brought a new set of such values to the task of understanding the world and our place in it but rather has completely transformed the task redefining the goals of enquiry This distinctive feature of the development of a scientific culture in the West marks it out from other scientifically productive cultures In *The Emergence of a Scientific Culture* Stephen Gaukroger offers a detailed and comprehensive account of the formative stages of this development and one which challenges the received wisdom that science was seen to be self evidently the correct path to knowledge and that the benefits of science were immediately obvious to the disinterested observer
