**AeroMACS** Behnam Kamali, 2018-10-23 This is a pioneering textbook on the comprehensive description of AeroMACS technology. It also presents the process of developing a new technology based on an established standard in this case IEEE 802.16 standards suite. The text introduces readers to the field of airport surface communications systems and provides them with comprehensive coverage of one of the key components of the Next Generation Air Transportation System NextGen i.e. AeroMACS. It begins with a critical review of the legacy aeronautical communications system and a discussion of the impetus behind its replacement with network-centric digital technologies. It then describes wireless mobile channel characteristics in general and focuses on the airport surface channel over the 5GHz band. This is followed by an extensive coverage of major features of IEEE 802.16 2009 Physical Layer PHY and Medium Access Control MAC Sublayer. The text then provides a comprehensive coverage of the AeroMACS standardization process from technology selection to network deployment. AeroMACS is then explored as a short range high data throughput broadband wireless communications system with concentration on the AeroMACS PHY layer and MAC sublayer main features followed by making a strong case in favor of the IEEE 802.16j Amendment as the foundational standard for AeroMACS networks. AeroMACS: An IEEE 802.16 Standard Based Technology for the Next Generation of Air Transportation Systems covers topics such as Orthogonal Frequency Division Multiple Access OFDMA, coded OFDMA, scalable OFDMA, Adaptive Modulation Coding AMC, Multiple Input Multiple Output MIMO systems, Error Control Coding ECC and Automatic Repeat Request ARQ techniques, Time Division Duplexing TDD, Inter Application Interference IAI and so on. It also looks at future trends and developments of AeroMACS networks as they are deployed across the world focusing on concepts that may be applied to improve the future capacity. In addition, this text discusses the challenges posed by complexities of airport radio channels as well as those pertaining to broadband transmissions. Examines physical layer PHY and Media Access Control MAC sublayer protocols and signal processing techniques of AeroMACS inherited from IEEE 802.16 standard and WiMAX networks. Compares AeroMACS and how it relates to IEEE 802.16 Standard Based WiMAX. AeroMACS: An IEEE 802.16 Standard Based Technology for the Next Generation of

Air Transportation Systems will appeal to engineers and technical professionals involved in the research and development of AeroMACS technical staffers of government agencies in aviation sectors and graduate students interested in standard based wireless networking analysis design and development New Directions in Wireless Communications Systems Athanasios G. Kanatas, Konstantina S. Nikita, Panagiotis (Takis) Mathiopoulos, 2017-10-16 Beyond 2020 wireless communication systems will have to support more than 1 000 times the traffic volume of today s systems This extremely high traffic load is a major issue faced by 5G designers and researchers This challenge will be met by a combination of parallel techniques that will use more spectrum more flexibly realize higher spectral efficiency and densify cells Novel techniques and paradigms must be developed to meet these goals The book addresses diverse key point issues of next generation wireless communications systems and identifies promising solutions The book s core is concentrated to techniques and methods belonging to what is generally called radio access network
