Parasitism: The Good, The Bad and The Ugly Marco A. Juarez-Estrada, Guillermo Tellez-Isaias, Danielle Mahaffey Graham, 2023-11-07 Parasitism is a tight association between species in which one organism the parasite lives on or inside the host causing it harm and is structurally adapted to this way of life Until the twenty first century parasitism was studied by parasitologists rather than ecologists or evolutionary biologists Today parasitism is a major element of evolutionary ecology as nearly all free living animals are hosts to at least one parasite species Since it is in the parasite's evolutionary interest for its host to flourish long term coevolution can lead to a stable relationship bordering on mutualism According to Lynn Margulis when resources are scarce natural selection moves relationships from parasitism to mutualism as it was brilliantly illustrated in Margulis' endosymbiosis theory where eukaryotic mitochondria and chloroplasts descended from formerly free living prokaryotes Boundary between mutualism symbiosis and pathological parasitism is a thin red line that frequently overlaps without a theory enough clear to explain this tight relationship between the parasite and its host
