Srull, Robert S. Wyer, Jr., 2015-12-03 If there is one topic on which we all are experts it is ourselves Psychologists depend upon this expertise as asking people questions about themselves is an important means by which they gather the data that provide much of the evidence for psychological theory Personal recollections play an important role in clinical theorizing people's thoughts feelings and beliefs provide the principal data for attitudinal research and judgments of one's traits and descriptions of one's goals and motivations are essential for the study of personality Yet despite their long dependence on self report data psychologists know very little about this basic resource and the processes that govern it In spite of the importance of the self as a concept in psychology virtually no empirically tested representational models of self knowledge can be found Recently however several theoretical accounts of the representation of self knowledge have been proposed These models have been concerned primarily with the factors underlying a particular type of self knowledge our trait conceptions of ourselves The models all share the starting assumption that the source of our knowledge of the traits that describe us is memory for our past behavior The lead article in this volume reviews the available models of the processes underlying trait self descriptiveness judgments Although these models appear quite different in their basic representational

assumptions exemplar and abstraction models sometimes are difficult to distinguish experimentally Presenting a series of studies using several new techniques which the authors believe are effective for assessing whether people recruit specific exemplars or abstract trait summaries when making trait judgments about themselves they conclude that specific behavioral exemplars play a far smaller role in the representation of trait knowledge than previously has been assumed Finally the limitations of social cognition paradigms as methods for studying the representation of long term social knowledge are discussed and the implications of the research for both existing and future social psychological research are explored

Systems of Psychotherapy Donald K. Fromme, 2010-10-26 Psychotherapy today encompasses a broad spectrum of approaches that focus to a varying extent on psychophysiological behavioral environmental or other aspects of human problems Despite the overlap that exists between many of these approaches there is no method that integrates more than a few of these aspects It is therefore important to understand the inherent advantages and disadvantages of each therapy system and how each helps people to solve their problems *Systems of Psychotherapy Dialectical Tensions and Integration* provides an in depth overview of the major therapeutic systems in practice today and outlines the philosophical differences and opportunities for integration among them This volume also considers the new ideas and approaches to therapy stemming from the postmodernist and integrative movements By highlighting the unique merits of each system readers are encouraged to combine factors present in the various systems to create a comprehensive view of human nature and functioning that will improve therapeutic outcomes Topics covered in this volume include Empirical foundations of psychotherapy Treatment planning and the initial interview Psychopharmacology Cognitive Behavioral interventions Humanistic approaches Interpersonal approaches Family systems and couples approaches Ecosystemic interventions *Systems of Psychotherapy* is an educational text which spans historical and contemporary issues in psychotherapy and is an ideal reference for students of clinical counseling and school psychology psychiatric residents and graduate students in clinical social work Personality: Determinants, Dynamics, and Potentials Gian Vittorio Caprara, Daniel Cervone, 2000-08-15 This book first published in 2000 is a comprehensive survey of research and theory in personality psychology *Journal of Mental Imagery*, 1998

Interpersonal Process in Cognitive Therapy Jeremy Safran,Zindel V. Segal,1996-09 Cognitive therapy with its clear cut measurable techniques has been a welcome innovation in recent years However the very specificity that lends itself so well to research and training has minimized the role of the therapeutic relationship making it difficult for therapists to respond flexibly to different clinical situations What is needed is an approach that focuses on the underlying mechanisms of therapeutic change not just on interventions In this practical and original book two highly respected clinician researchers integrate findings from cognitive psychology infant developmental research emotion theory and relational therapy to show how change takes place in the interpersonal context of the

therapeutic relationship and involves experiencing the self in new ways not just altering behavior or cognitions Making use of extensive clinical transcripts accompanied by moment to moment analyses of the change process the authors illustrate the subtle interaction of cognitive and interpersonal factors They show how therapy unfolds at three different levels in fluctuations in the patient s world in the therapeutic relationship and in the therapist s inner experience and provide clear guidelines for when to focus on a particular level The result is a superb integration of cognitive and interpersonal approaches that will have a major impact on theory and practice A Jason Aronson Book **The Talking Cures** Robert S.
