**Analysis** ASM International, 2019-12-01 The theme for the 2019 conference is Novel Computing Architectures Papers will include discussions on the advent of Artificial Intelligence and the promise of quantum computing that are driving disruptive computing architectures Neuromorphic chip designs on one hand and Quantum Bits on the other still in R D will introduce new computing circuitry and memory elements novel materials and different test methodologies These novel computing architectures will require further innovation which is best achieved through a collaborative Failure Analysis community composed of chip manufacturers tool vendors and universities Extreme Environment Electronics John D. Cressler, H. Alan

Mantooth, 2017-12-19 Unfriendly to conventional electronic devices circuits and systems extreme environments represent a serious challenge to designers and mission architects The first truly comprehensive guide to this specialized field Extreme Environment Electronics explains the essential aspects of designing and using devices circuits and electronic systems intended to operate in extreme environments including across wide temperature ranges and in radiation intense scenarios such as space The Definitive Guide to Extreme Environment Electronics Featuring contributions by some of the world's foremost experts in extreme environment electronics the book provides in depth information on a wide array of topics It begins by describing the extreme conditions and then delves into a description of suitable semiconductor technologies and the modeling of devices within those technologies It also discusses reliability issues and failure mechanisms that readers need to be aware of as well as best practices for the design of these electronics Continuing beyond just the paper design of building blocks the book rounds out coverage of the design realization process with verification techniques and chapters on electronic packaging for extreme environments The final set of chapters describes actual chip level designs for applications in energy and space exploration Requiring only a basic background in electronics the book combines theoretical and practical aspects in each self contained chapter Appendices supply additional background material With its broad coverage and depth and the expertise of the contributing authors this is an invaluable reference for engineers scientists and technical managers as well as researchers and graduate students A hands on resource it explores what is required to successfully operate electronics in the most demanding conditions *Principles of Radiation Interaction in Matter and Detection* Claude Leroy, Pier-Giorgio Rancoita, 2009 This book like its first edition addresses the fundamental principles of interaction between radiation and matter and the principle of particle detectors in a wide scope of fields from low to high energy including space physics and the medical environment It provides abundant information about the processes of electromagnetic and hadronic

energy deposition in matter detecting systems and performance and optimization of detectors In this second edition new sections dedicated to the following topics are included space and high energy physics radiation environment non ionizing energy loss NIEL displacement damage in silicon devices and detectors single event effects detection of slow and fast neutrons with silicon detectors solar cells pixel detectors and additional material for dark matter detectors This book will benefit graduate students and final year undergraduates as a reference and supplement for courses in particle astroparticle and space physics and instrumentation A part of it is directed toward courses in medical physics The book can also be used by researchers in experimental particle physics at low medium and high energy who are dealing with instrumentation

**Principles of Radiation Interaction in Matter and Detection (4th Edition)** Claude Leroy, 2015-12-17 The fourth edition of this book has been widely revised It includes additional chapters and some sections are complemented with either new ones or an extension of their content In this latest edition a complete treatment of the physics and properties of semiconductors is presented covering transport phenomena in semiconductors scattering mechanisms radiation effects and displacement damages Furthermore this edition presents a comprehensive treatment of the Coulomb scattering on screened nuclear potentials resulting from electrons protons light and heavy ions ranging from very low up to ultra relativistic kinetic energies and allowing one to derive the corresponding NIEL non ionizing energy loss doses deposited in any material The contents are organized into two parts Chapters 1 to 7 cover Particle Interactions and Displacement Damage while the remaining chapters focus on Radiation Environments and Particle Detection This book can serve as reference for graduate students and final year undergraduates and also as supplement for courses in particle astroparticle space physics and instrumentation A section of the book is directed toward courses in medical physics Researchers in experimental particle physics at low medium and high energy who are dealing with instrumentation will also find the book useful
