A Mathematical Nature Walk John A. Adam, 2011-09-12 How heavy is that cloud Why can you see farther in rain than in fog Why are the droplets on that spider web spaced apart so evenly If you have ever asked questions like these while outdoors and wondered how you might figure out the answers this is a book for you An entertaining and informative collection of fascinating puzzles from the natural world around us A Mathematical Nature Walk will delight anyone who loves nature or math or both John Adam presents ninety six questions about many common natural phenomena and a few uncommon ones and then shows how to answer them using mostly basic mathematics Can you weigh a pumpkin just by carefully looking at it Why can you see farther in rain than in fog What causes the variations in the colors of butterfly wings bird feathers and oil slicks And why are large haystacks prone to spontaneous combustion These are just a few of the questions you ll find inside Many of the problems are illustrated with photos and drawings and the book also has answers a glossary of terms and a list of some of the patterns found in nature About a quarter of the questions can be answered with arithmetic and many of the rest require only precalculus But regardless of math background readers will learn from the informal descriptions of the problems and gain a new appreciation of the beauty of nature and the mathematics that lies behind it

Mathematics in Nature John Adam, 2011-10-02 From rainbows river meanders and shadows to spider webs honeycombs and the markings on animal coats the visible world is full of patterns that can be described mathematically Examining such readily observable phenomena this book introduces readers to the beauty of nature as revealed by mathematics and the beauty of mathematics as revealed in nature Generously illustrated written in an informal style and replete with examples from everyday life Mathematics in Nature is an excellent and undaunting introduction to the ideas and methods of mathematical modeling It illustrates how mathematics can be used to formulate and solve puzzles observed in nature and to interpret the solutions In the process it teaches such topics as the art of estimation and the effects of scale particularly what happens as things get bigger Readers will develop an understanding of the symbiosis that exists between basic scientific principles and their mathematical expressions as well as a deeper appreciation for such natural phenomena as cloud formations halos and glories tree heights and leaf patterns butterfly and moth wings and even puddles and mud cracks Developed out of a university course this book makes an ideal supplemental text for courses in applied mathematics and mathematical modeling It will also appeal to mathematics educators and enthusiasts at all levels and is designed so that it can be dipped into at leisure
