Rational Curves On Algebraic Varieties:

Rational Curves on Algebraic Varieties Janos Kollar, 2013-04-09 The aim of this book is to provide an introduction to the structure theory of higher dimensional algebraic varieties by studying the geometry of curves especially rational curves on varieties The main applications are in the study of Fano varieties and of related varieties with lots of rational curves on them This Ergebnisse volume provides the first systematic introduction to this field of study The book contains a large number of examples and exercises which serve to illustrate the range of the methods and also lead to many open questions of current research

Rational Curves on Algebraic Varieties János Kollár, 1996 **Higher Dimensional Varieties and Rational Points** K. Böröczky, János Kollár, Szamuely Tamas, 2003-07-10 Exploring the connections between arithmetic and geometric properties of algebraic varieties has been the object of much fruitful study for a long time especially in the case of curves The aim of the Summer School and Conference on Higher Dimensional Varieties and Rational Points held in Budapest Hungary during September 2001 was to bring together students and experts from the arithmetic and geometric sides of algebraic geometry in order to get a better understanding of the current problems interactions and advances in higher dimension The lecture series and conference lectures assembled in this volume give a comprehensive introduction to students and researchers in algebraic geometry and in related fields to the main ideas of this rapidly developing area

Geometry of Rational Curves on Algebraic Varieties Matthew F. DeLand, 2009 **Algebraic Geometry I** V.I. Danilov, V.V. Shokurov, 1998-03-17 To sum up this book helps to learn algebraic geometry in a short time its concrete style is enjoyable for students and reveals the beauty of mathematics Acta Scientiarum Mathematicarum Geometry of Higher Dimensional Algebraic Varieties Thomas Peternell, Joichi Miyaoka, 2012-12-06 This book is based on lecture notes of a seminar of the Deutsche Mathematiker Vereinigung held by the authors at Oberwolfach from April 2 to 8 1995 It gives an introduction to the classification theory and geometry of higher dimensional complex algebraic varieties focusing on the tremendous developments of the subject in the last 20 years The work is in two parts with each one preceded by an introduction describing its contents in detail Here it will suffice to simply explain how the subject matter has been divided Cum grano salis one might say that Part 1 Miyaoka is more concerned with the algebraic methods and Part 2 Peternell with the more analytic aspects though they have unavoidable overlaps because there is no clearcut distinction between the two methods Specifically Part 1 treats the deformation theory existence and geometry of rational curves via characteristic p while Part 2 is principally concerned with vanishing theorems and their geometric applications Part I Geometry of Rational Curves on Varieties Yoichi Miyaoka RIMS Kyoto University 606 01 Kyoto Japan Introduction Why Rational Curves This note is based on a series of lectures given at the Mathematisches Forschungsinstitut at Oberwolfach Germany as a part of the DMV seminar Mori Theory The construction of minimal models was discussed by T Problems on Rational Points and Rational Curves on Algebraic Varieties Ūrij Ivanovič Manin, 1994 *Rational Points, Rational Curves, and Entire Holomorphic Curves*

on Projective Varieties Carlo Gasbarri, Steven Lu, Mike Roth, Yuri Tschinkel, 2015-12-22 This volume contains papers from the Short Thematic Program on Rational Points Rational Curves and Entire Holomorphic Curves and Algebraic Varieties held from June 3-28 2013 at the Centre de Recherches Mathématiques Université de Montréal Québec Canada The program was dedicated to the study of subtle interconnections between geometric and arithmetic properties of higher dimensional algebraic varieties The main areas of the program were among others proving density of rational points in Zariski or analytic topology on special varieties understanding global geometric properties of rationally connected varieties as well as connections between geometry and algebraic dynamics exploring new geometric techniques in Diophantine approximation

This book is co published with the Centre de Recherches Mathématiques **Lectures on Curves, Surfaces and Projective Varieties**, This book offers a wide ranging introduction to algebraic geometry along classical lines It consists of lectures on topics in classical algebraic geometry including the basic properties of projective algebraic varieties linear systems of hypersurfaces algebraic curves with special emphasis on rational curves linear series on algebraic curves Cremona transformations rational surfaces and notable examples of special varieties like the Segre Grassmann and Veronese varieties An integral part and special feature of the presentation is the inclusion of many exercises not easy to find in the literature and almost all with complete solutions The text is aimed at students of the last two years of an undergraduate program in mathematics It contains some rather advanced topics suitable for specialized courses on the advanced undergraduate or beginning graduate level as well as interesting topics for a senior thesis The prerequisites have been deliberately limited to basic elements of projective geometry and abstract algebra Thus for example some knowledge of the geometry of subspaces and properties of fields is assumed The book will be welcomed by teachers and students of algebraic geometry who are seeking a clear and panoramic path leading from the basic facts about linear subspaces conics and quadrics to a systematic discussion of classical algebraic varieties and the tools needed to study them The text provides a solid foundation for approaching more advanced and abstract literature Birational Geometry, Rational Curves, and Arithmetic

Fedor Bogomolov, Brendan Hassett, Yuri Tschinkel, 2013-05-17 This book features recent developments in a rapidly growing area at the interface of higher dimensional birational geometry and arithmetic geometry It focuses on the geometry of spaces of rational curves with an emphasis on applications to arithmetic questions Classically arithmetic is the study of rational or integral solutions of diophantine equations and geometry is the study of lines and conics From the modern standpoint arithmetic is the study of rational and integral points on algebraic varieties over nonclosed fields A major insight of the 20th century was that arithmetic properties of an algebraic variety are tightly linked to the geometry of rational curves on the variety and how they vary in families This collection of solicited survey and research papers is intended to serve as an introduction for graduate students and researchers interested in entering the field and as a source of reference for experts working on related problems Topics that will be addressed include birational properties such as rationality unirationality and

rational connectedness existence of rational curves in prescribed homology classes cones of rational curves on rationally connected and Calabi Yau varieties as well as related questions within the framework of the Minimal Model Program

The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and gripping novel that will keep you wondering until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
