Real Time Microcomputer Control of Industrial Processes S.G. Tzafestas, J.K. Pal, 1990-08-31 The introduction of the microprocessor in computer and system engineering has motivated the development of many new concepts and has simplified the design of many modern industrial systems During the first decade of their life microprocessors have shown a tremendous evolution in all possible directions technology power functionality I O handling etc Of course putting the microprocessors and their environmental devices into properly operating systems is a complex and difficult task requiring high skills for melding and integrating hardware and systemic components software This book was motivated by the editors feeling that a cohesive reference is needed providing a good coverage of modern industrial applications of microprocessor based real time control together with latest advanced methodological issues Unavoidably a single volume cannot be exhaustive but the present book contains a sufficient number of important real time applications The book is divided in two sections Section I deals with general hardware software and systemic topics and involves six chapters Chapter 1 by Gupta and Toong presents an overview of the development of microprocessors during their first twelve years of existence Chapter 2 by Dasgupta deals with a number of system software concepts for real time microprocessor based systems task scheduling memory

Jovic, 2012-12-06 This book reflects the considerable current industrial interest and investment in process control systems The use of computer systems in process control can provide great benefits and it is estimated that efficiency can be increased by up to 30% It is not surprising therefore that there have been considerable efforts by system designers and users to introduce and use such systems Process hardware is integrated into a complete production system through data processing It is for this purpose that technical specialists e g electrical mechanical electronics communication and process engineers and program mers are involved in data processing The scope of this book is therefore to assist in the selection of computer hardware and software that match the functional specification of the data processing component of a particular system The principal points covered in this book are set out below Part One Production process hardware for a standard process is outlined and the information processing hardware is described Large mechanical process hardware and process information devices e g sensors and control elements involved in the process create a coherent production unit or system which can be the control unit i e the basic process unit The hardware processes are described and the mathematics explained This enables the application of control laws in order to linearize the process about its working point as well as a stratification of process control tasks

Model Based Process Control T.J. McAvoy, Y. Arkun, E. Zafiriou, 2014-06-28 Presented at this workshop were mathematical models upon which process control is based and the practical applications of this method of control within industry case studies include examples from the paper and pulp industry materials industry and the chemical industry among others From these presentations emerged a need for further research and development into process control Containing 19 papers these Proceedings will be a valuable reference work for all those involved in the designing of continuous production processes for industry and for the end user involved in the practical application of process control within their manufacturing process
