Keller,G. Bailly,A. Monaghan,J. Terken,M. Huckvale,2001-11-28 Naturalness in synthetic speech is one of the most intractable problems in information technology today Although speech synthesis systems have improved considerably over the last 20 years they rarely sound entirely like human speakers Why is this so and what can be done about it Prosodic processing must be rendered more varied and more appropriate to the speech situation Timing melodic control and the relationships between the various prosodic parameters need increased attention Signal processing systems must be developed and perfected that are capable of generating more than just one voice from a database A better understanding must be achieved of what distinguishes one voice from another and of how speech styles differ between simply reading aloud numbers and sentences and their use in interactive speech New evaluation methodologies should be developed to provide objective and subjective measurements of the intelligibility of the synthetic speech and the cognitive load imposed upon the listener by impoverished stimuli Adequate text markup systems must be proposed and tested with multiple languages in real world situations Further research is required to integrate speech synthesis systems into larger natural language processing systems Improvements in Speech Synthesis presents the latest research in the above areas Contributors include speech synthesis specialists from 16 countries with experience in the development of systems for 12 European languages This volume emerges from a four year European COST project focussed on The Naturalness of Synthetic Speech and will be a valuable text for everyone involved in speech synthesis   *Data Mining and Knowledge Discovery in Real Life Applications* Julio Ponce,Adem Karahoca,2009-01-01 This book presents four different ways of theoretical and practical advances and applications of data mining in different promising areas like Industrialist Biological and Social Twenty six chapters cover different special topics with proposed novel ideas

Each chapter gives an overview of the subjects and some of the chapters have cases with offered data mining solutions We hope that this book will be a useful aid in showing a right way for the students researchers and practitioners in their studies

Burgoon,Nadia Magnenat-Thalmann,Maja Pantic,Alessandro Vinciarelli,2017-05-08 This book provides comprehensive authoritative surveys covering the modeling automatic detection analysis and synthesis of nonverbal social signals Understanding Developmental Dyslexia: Linking Perceptual and Cognitive Deficits to Reading Processes Pierluigi Zoccolotti,Peter F. de Jong,Donatella Spinelli,2016-06-24 Understanding the mechanisms responsible for developmental dyslexia DD is a key challenge for researchers A large literature mostly concerned with learning to read in opaque orthographies emphasizes phono logical interpretations of the disturbance Other approaches focused on the visual per ceptual aspects of orthographic coding Recently this perspective was supported by imaging data showing that individuals with DD have hypo activation in occipito temporal areas a finding common to both transpar ent and opaque orthographies Nevertheless it is difficult to infer causal relationships from activation data Accommodating these findings within the cognitive architecture of reading processes is still an open issue This is a general problem which is present in much of the literature For example several studies investigating the perceptual and cognitive abilities that distinguish groups of children with and without DD failed to provide explicit links with the reading process Thus several areas of investigation e g acoustic deficits or magnocellular deficiencies have been plagued by replication failures Furthermore much research has neglected the possible contribution of comorbid symptoms By contrast it is now well established that developmental disorders present a large spectrum of homotopic and heterotopic co morbidities that make causal interpretations problematic This has led to the idea that the etiology of learning difficulties is multifactorial thus challenging the traditional models of DD Recent genetic studies provide information on the multiple risk factors that contribute to the genesis of the disturbance Another critical issue in DD is that much of the research has been conducted in English speaking individuals However English is a highly irregular orthography and doubts have been raised on the appropriateness of automatically extending interpretations based on English to other more regular orthographies By contrast important information can be gotten from systematic comparisons across languages

Thus the distinction between regular and irregular orthographies is another potentially fruitful area of investigation Overall in spite of much research current interpretations seem unable to integrate all available findings Some proposals focus on the cognitive description of the reading profile and explicitly ignore the distal causes of the disturbance Others propose visual acoustic or phonological mech anisms but fail to link them to the pattern of reading impairment present in different children The present Research Topic brings together studies based on different methodological approaches i e behavioural studies examining cognitive and psycholinguistic factors eye movement inves tigations biological markers neuroimaging and genetic studies involving dyslexic groups with and without comorbid symptoms and in different orthographies transparent and opaque to identify the mechanisms underlying DD The RT does not focus on a single model or theory of dyslexia but rather brings together different approaches and ideas which we feel are fruitful for a deeper understanding developmental dyslexia
