Realizing the Potential of C4I National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Commission on Physical Sciences, Mathematics, and Applications, Committee to Review DOD C4I Plans and Programs, 1999-05-17 Rapid progress in information and communications technologies is dramatically enhancing the strategic role of information positioning effective exploitation of these technology advances as a critical success factor in military affairs These technology advances are drivers and enablers for the nervous system of the military its command control communications computers and intelligence C4I systems to more effectively use the muscle side of the military Authored by a committee of experts drawn equally from the military and commercial sectors Realizing the Potential of C4I identifies three major areas as fundamental challenges to the full Department of Defense DOD exploitation of C4I technology information systems security interoperability and various aspects of DOD process and culture The book details principles by which to assess DOD efforts in these areas over the long term and provides specific more immediately actionable recommendations Although DOD is the focus of this book the principles and issues presented are also relevant to interoperability architecture and security challenges faced by government as a whole and by large complex public and private enterprises across the economy

Realizing the Potential of C4I: Fundamental Challenges, 1999 Section 262 of the Defense Authorization Act for Fiscal Year 1996 directed the Secretary of Defense to request that the National Research Council conduct a review of current and planned service and defense wide programs for command control communications computers and intelligence C4I with a special focus on cross service and inter service issues For purposes of this report C4I systems include systems designed to support a commander's exercise of command and control across the range of military operations and to generate information and knowledge about an adversary and friendly forces Although the Cold War is over new regional threats to U S interests are increasingly likely The U S military in its traditional role as an instrument of national power will be required to deal with a more varied set of military tasks and missions helping to both establish and maintain regional peace and stability and also coping with less traditional tasks such as humanitarian relief and disaster recovery Budget pressures have already resulted in a significantly reduced force structure and withdrawal of U S military presence from many overseas locations Joint operations are now the norm and in many cases U S military operations are combined with those of allied and coalition forces Forces responding to contingencies are likely to be employed come as they are with only minimal time for preparation and deployment before entering the operational phase of a contingency The military that must play these roles has many different C4I systems both old and new Older systems often were built for single purpose stand alone applications and often rely heavily on military specific technology In contrast current systems are increasingly being built to meet explicit requirements for interoperability and flexibility and the Department of Defense has been increasingly capitalizing on commercial information technologies for C4I systems

Alic, 2007-09-03 Trillions for Military Technology explains why the weapons purchased by the U S Department of Defense cost so much why it takes decades to get them into production even as innovation in the civilian economy becomes ever more frenetic and why some of those weapons don't work very well despite expenditures of many billions of dollars It also explains what do about these problems The author argues that the internal politics of the armed services make weapons acquisition almost unmanageable Solutions require empowering civilian officials and reforms that will bring choice of weapons into the sunshine of public debate *Crisis Management: Concepts, Methodologies, Tools, and Applications* Management Association, Information Resources, 2013-11-30 This book explores the latest empirical research and best real world practices for preventing weathering and recovering from disasters such as earthquakes or tsunamis to nuclear disasters and cyber terrorism Provided by publisher **State Voter Registration Databases** National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on State Voter Registration Databases, 2008-05-17 The Help America Vote Act of 2002 requires the states to develop a single computerized voter registration data base VRD that is defined maintained and administered at the state level To help the states with this task the U S Election Assistance Commission asked the NRC to organize a series of workshops and prepare an interim report addressing the challenges in

Information Technology for Counterterrorism National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on the Role of Information Technology in Responding to Terrorism, 2003-04-07 Information technology IT is essential to virtually all of the nation s critical infrastructures making them vulnerable by a terrorist attack on their IT system An attack could be on the system itself or use the IT system to launch or exacerbate another type of attack IT can also be used as a counterterrorism tool The report concludes that the most devastating consequences of a terrorist attack would occur if it were on or used IT as part of a broader attack The report

presents two recommendations on what can be done in the short term to protect the nation's communications and information systems and several recommendations about what can be done over the longer term. The report also notes the importance of considering how an IT system will be deployed to maximize protection against and usefulness in responding to attacks.

Science and Technology to Combat Terrorism United States. Congress. House. Committee on Science, 2002

Making the Nation Safer National Research Council, Division on Engineering and Physical Sciences, Committee on Science and Technology for Countering Terrorism, 2002-10-05

Vulnerabilities abound in U.S. society. The openness and efficiency of our key infrastructures—transportation, information, and telecommunications systems, health systems, the electric power grid, emergency response units, food, and water supplies, and others—make them susceptible to terrorist attacks. *Making the Nation Safer* discusses technical approaches to mitigating these vulnerabilities. A broad range of topics are covered in this book, including:

- Nuclear and radiological threats such as improvised nuclear devices and dirty bombs
- Bioterrorism
- medical research
- agricultural systems and public health
- Toxic chemicals and explosive materials
- Information technology such as communications systems, data management, cyber attacks, and identification and authentication systems
- Energy systems such as the electrical power grid and oil and natural gas systems
- Transportation systems
- Cities and fixed infrastructures such as buildings, emergency operations centers, and tunnels

The response of people to terrorism, such as how quality of life and morale of the population can be a target of terrorists and how people respond to terrorist attacks, and linked infrastructures, i.e., the vulnerabilities that result from the interdependencies of key systems. In each of these areas, there are recommendations on how to immediately apply existing knowledge and technology to make the nation safer and on starting research and development programs that could produce innovations that will strengthen key systems and protect us against future threats. The book also discusses issues affecting the government's ability to carry out the necessary science and engineering programs and the important role of industry, universities, and states, counties, and cities in homeland security efforts. A long-term commitment to homeland security is necessary to make the nation safer, and this book lays out a roadmap of how science and engineering can assist in countering terrorism.

Right To National Self-Defense Dimitrios Delibasis, 2007-11-19

This ambitious work, which took the better part of a decade to produce, will be essential reading for all serious defense study students and of absorbing interest to military professionals and lay people concerned with the future of warfare and all aspects of response to military attack. Its ultimate aim is to demonstrate that the advent of Cyberwarfare has pushed traditional legal thinking regarding the regulation of forcible action beyond traditional boundaries. It attempts to do so by critically analyzing specific characteristics which are inherent to Cyberwarfare, such as stealth, speed, untraceability, the availability to State as well as Non State sponsored agents, their defiance of traditional borders, and an unprecedented potential for destruction, all of which have played a major role in making obsolescent traditional legal norms relied upon for the effective regulation of the use of force. It follows from the above that no defense system can be effectively regulated.

especially one as new and unconventional as Information Warfare unless all its specific aspects are explored as deeply as possible. The best means to achieve such a purpose have been deemed to be through the inclusion as well as the careful analysis of as many real life examples of Information Warfare operations as possible in order to illustrate the special nature of Information Warfare and its various individual features. The examples compiled for inclusion have been selected not on the basis of being the most recent but on the basis of their factual background being as fully known as possible. Consequently this book has been constructed around the concept of legality starting with a section outlining currently existing legal norms of individual self defense then applying those norms to Information Warfare Operations including a presentation of existing international legal instruments with provisions applicable to Information Warfare which could serve as additional essential guidelines for a future legal framework specifically crafted to regulate the use of force in cyberspace. Last but not least this book sets a paradigm with regard to Cyberwarfare as well as with other methods of warfare which escape the boundaries of the traditional State monopoly of the use of force. It ultimately shows the extent to which traditional legal thinking which is shaped around the premise of regulating typical forms of State forcible action when faced with such methods of warfare is totally obsolete.

Preparing the U.S. Army for Homeland Security Eric V. Larson, John E. Peters, 2001-03-26. Homeland security encompasses five distinct missions: domestic preparedness and civil support in case of attacks on civilians; continuity of government; continuity of military operations; border and coastal defense; and national missile defense. This report extensively details four of those mission areas: national missile defense having been covered in great detail elsewhere. The authors define homeland security and its mission areas and provide a methodology for assessing homeland security response options and review relevant trend data for each mission area. They also assess the adequacy of the doctrine, organizations, training, leadership, materiel, and soldier systems and provide illustrative scenarios to help clarify Army planning priorities. The report concludes with options and recommendations for developing more cost effective programs and recommends a planning framework that can facilitate planning to meet homeland security needs.

Avoiding Surprise in an Era of Global Technology Advances National Research Council, Division on Engineering and Physical Sciences, Committee on Defense Intelligence Agency Technology Forecasts and Reviews, 2005-05-31. The global spread of science and technology expertise and the growing commercial access to advanced technologies with possible military application are creating potentially serious threats to the technological superiority underpinning U.S. military strength. Key to dealing with this situation is the ability of the U.S. intelligence community to be able to provide adequate and effective warning of evolving critical technologies. To assist in performing this task the Technology Warning Division of the Defense Intelligence Agency (DIA) asked the National Research Council (NRC) to undertake a study examining technology warning issues. This report provides the first part of that study. It presents an assessment of critical evolving technologies, postulates ways potential adversaries could disrupt these technologies, and provides indicators for the intelligence community to determine if such methods are under

development The intention of this report is to establish the foundation for a long term relationship with the technology warning community to support the examination of technology warning issues **US Military Innovation Since the Cold War** Harvey Sapolsky,Benjamin Friedman,Brendan Green,2009-04-28 explains how the US military transformation failed in the post Cold war era Harvey Sapolsky is a leading defence scholar in the US will be of interest to students of strategic studies defence studies military studies US politics and security studies in general *Astride Two Worlds* Barton C.
