Jeffries, 2006 Cancer is a group of different diseases over 100 characterised by uncontrolled growth and spread of abnormal cells. Cancer can arise in many sites and behave differently depending on its organ of origin. If a cancer spreads, metastasizes, the new tumour bears the same name as the original primary tumour. This research progress has resulted in many experimental treatments and cures which establish hope for wide spread cures. The role of other adjuvant radical or palliative therapies in gallbladder cancer has not been fully clarified in the literature. Chemotherapy is experimental and is not very helpful while the role of radiotherapy is controversial. It appears that gallbladder carcinomas are not as radio resistant as was formerly thought. In the majority of cases, radiotherapy has a palliative role and occasionally plays an important function in the cure of the disease in combination with complete surgical resection. This book gathers significant new research on the subject of gallbladder cancer. **Lung Cancer** Robert L.
