Knowledge Structures: Recent Developments In Theory And Application Jurgen Heller, Luca Stefanutti, 2024-07-09 Founded in 1985 by Jean Claude Falmagne and Jean Paul Doignon Knowledge Structure Theory KST constitutes a rigorous and current mathematical theory for the representation and the assessment of human knowledge The seminal work of these authors initiated a highly active research strand with an ever growing literature mostly scattered across various technical journals Starting from a concise but comprehensive introduction to its foundations this volume provides a state of the art review of KST For the first time the volume brings together the most important theoretical developments and extensions of the last decade and presents new areas of application beyond education with contributions by key researchers in the field Among the important advances

covered by this book are 1 a comprehensive treatment of probabilistic models in KST 2 polytomous extensions of the theory 3 KST based psychological diagnostics and neuropsychological assessment 4 the representation and assessment of cognitive skills in problem solving as well as procedural skills In addition this book also includes an overview of available software for the application of KST

Mathematical Psychology in Progress Edward E. Roskam, 2012-12-06 This volume is the third volume of papers originating from the European Mathematical Psychology Group Earlier volumes were E Degreef J van Buggenhaut Eds *Trends In Mathematical Psychology* Amsterdam North Holland Publ Cy 1984 and E E Roskam R Suck Eds *Progress in Mathematical Psychology* Amsterdam Elsevier Science Publ As the title indicates this volume presents work in progress which was reported in one of the recent annual meetings of the European Mathematical Psychology Group The Group finds it worthwhile to disseminate this work using a review process which is somewhat less strict and a publication lag which is shorter than would be the case for standard international journals The editor is happy that the meetings of the European Mathematical Psychology Group are regularly attended by colleagues from overseas Their contributions also appear in this volume as was the case in earlier volumes Despite apparent heterogeneity the reader will observe that European mathematical psychologists have a keen interest in basic issues of mathematical modeling and measurement theory and that also substantive topics such as decision making perception and performance are studied in the context of formal modeling Also and perhaps of more than casual importance for future developments is the fact that theory experiment and data analysis go closely together It should therefore not surprise that psychometric topics and topics in scaling are represented in this volume alongside with topics of a more purely mathematical nature

Recent Advances in Language, Communication, and Social Psychology Howard Giles, Robert N. St. Clair, 2018-10-26 Originally published in 1985 Detailed exploration of the dynamics of language within social psychology forms a social psychology of language which is distinct from other approaches This volume presents some of the growing body of research in this area with many theoretical models and ideas chapters consider the relationship between language and social situations looking at cognitive structures in how communication between individuals develops in childhood and beyond how it defines social situations influences others expresses feelings and values evokes social categorizations and how it can break down

Recent Advances in Cognitive-Developmental Theory Charles J. Brainerd, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e g logical and mathematical development development of learning All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series

Recent Advances and Future Directions in Causality, Prediction, and Specification Analysis Xiaohong Chen, Norman R. Swanson, 2012-08-01 This book is a collection of articles that present the most recent cutting edge results on specification and estimation of economic models written by a number of the world's foremost leaders in the fields of theoretical and methodological econometrics Recent advances in asymptotic approximation theory including the use of higher order asymptotics for things like estimator bias correction and the use of various expansion and other theoretical tools for the development of bootstrap techniques designed for implementation when carrying out inference are at the forefront of theoretical development in the field of econometrics One important feature of these advances in the theory of econometrics is that they are being seamlessly and almost immediately incorporated into the empirical toolbox that applied practitioners use when actually constructing models using data for the purposes of both prediction and policy analysis and the more theoretically targeted chapters in the book will discuss these developments Turning now to empirical methodology chapters

on prediction methodology will focus on macroeconomic and financial applications such as the construction of diffusion index models for forecasting with very large numbers of variables and the construction of data samples that result in optimal predictive accuracy tests when comparing alternative prediction models Chapters carefully outline how applied practitioners can correctly implement the latest theoretical refinements in model specification in order to build the best models using large scale and traditional datasets making the book of interest to a broad readership of economists from theoretical

econometricians to applied economic practitioners **Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Methodology** ,2018-03-13 V Methodology E J Wagenmakers Volume Editor Topics covered include methods and models in categorization cultural consensus theory network models for clinical psychology response time modeling analyzing neural time series data models and methods for reinforcement learning convergent methods of memory research theories for discriminating signal from noise bayesian cognitive modeling mathematical modeling in cognition and cognitive neuroscience the stop signal paradigm hypothesis testing and statistical inference model comparison in psychology fmri neural recordings open science neural networks and neurocomputational modeling serial versus parallel processing methods in psychophysics *Measurement and Representation of Sensations* Hans Colonius,Ehtibar N. Dzhafarov,2013-05-13

Measurement and Representation of Sensations offers a glimpse into the most sophisticated current mathematical approaches to psychophysical problems In this book editors Hans Colonius and Ehtibar N Dzhafarov top scholars in the field present a broad spectrum of innovative approaches and techniques to classical problems in psychophysics at different levels of stimulus complexity The chapters emphasize rigorous mathematical constructions to define psychophysical concepts and relate them to observable phenomena The techniques presented both deterministic and probabilistic are all original and recent Subjects addressed throughout the six chapters of this volume include computing subjective distances from discriminability a new psychophysical theory of intensity judgments computing subjective distances from two discriminability functions an alternative to the model building approach based on observable probabilities and possible forms of perceptual separability developed within a generalization of General Recognition Theory *Measurement and Representation of Sensations* is a valuable text for both behavioral scientists and applied mathematicians *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70

New Handbook of Mathematical Psychology:

Volume 2, Modeling and Measurement William H. Batchelder,Hans Colonius,Ehtibar N. Dzhafarov,2018-09-27 The field of mathematical psychology began in the 1950s and includes both psychological theorizing in which mathematics plays a key role and applied mathematics motivated by substantive problems in psychology Central to its success was the publication of the first Handbook of Mathematical Psychology in the 1960s The psychological sciences have since expanded to include new areas of research and significant advances have been made in both traditional psychological domains and in the applications of the computational sciences to psychology Upholding the rigor of the original Handbook the New Handbook of

Mathematical Psychology reflects the current state of the field by exploring the mathematical and computational foundations of new developments over the last half century The second volume focuses on areas of mathematics that are used in constructing models of cognitive phenomena and decision making and on the role of measurement in psychology

Measurement With Persons Birgitta Berglund, Giovanni B. Rossi, James T. Townsend, Leslie R. Pendrill, 2013-05-13

Knowledge Spaces Jean-Claude Falmagne, Dietrich Albert, Christopher Doble, David Eppstein, Xiangen Hu, 2013-06-20 The book describes up to date applications and relevant theoretical results These applications come from various places but the most important one numerically speaking is the internet based educational system ALEKS The ALEKS system is bilingual English Spanish and covers all of mathematics from third grade to the end of high school and chemistry It is also widely used in higher education because US students are often poorly prepared when they reach the university level The chapter by Taagepera and Arasasingham deals with the application of knowledge spaces independent of ALEKS to the teaching of college chemistry The four chapters by Albert and his collaborators strive to give cognitive interpretations to the combinatoric structures obtained and used by the ALEKS system The contribution by Eppstein is technical and develops means of searching the knowledge structure efficiently
