Resins for Surface Coatings: Alkyds & polyesters, 2000 **Resins for Surface Coatings, Resins for Surface Coatings** P. K. T. Oldring, 2001-04-05 This text offers a basic understanding of the topic whilst reflecting recent advances within the industry It considers in detail two of the most important types of resins alkyd resins and polyester resins and contains a broad range of topics on alkyd resins including different types of alkyds raw materials for alkyd resins and the chemistry and manufacture of alkyd resins In addition typical alkyd formulations and suggested end uses are discussed as is the important topic of paint formulation with alkyd resins Discusses in detail the applications of polyester resins in surface coatings the raw materials used including polyacids and polyols and different crosslinking systems as well as giving examples of some typical polyester resin formulations *Resins for Surface Coatings, 3VL Set* P. K. T. Oldring, 2002-02-22 Since the first editions of these books were published there have been many significant advances in the field of surface coatings These second editions are written at a level suitable for graduates new to the resins and surface coatings industries They give a basic understanding of the topics covered whilst reflecting recent advances within the industry Within these three books the chemistries of different types of resins for surface coatings are explained In each case an overview is given suitable for the graduate new to industry or for less technically involved management Coating formulations are given to illustrate the use of different types of resin As with the chemistry they are not meant to be exhaustive These books should provide a valuable guide for formulators and should be considered as an essential aid for the bench chemist The aim has been to give a general overview including the necessary background information required to ensure that coating formulators understand the resins with which they are working and the principles of crosslinking Resins for Surface Coatings Peter K. increasing with the development of civilization There has been considerable impact in this field Surface coating technology specializes in finding out engineering solutions to all the critical production problems related to coating the products on a continuous and consistent basis in your production plant Surface coating can be defined as a process in which a substance is applied to other materials to change the surface properties such as colour gloss resistance to wear or chemical attack or permeability without changing the bulk properties Production of surface coating by any method depends primarily on two factors the cohesion between the film forming substances and the adhesion between the film and the substrate The development of science and technology revolutionized the surface coating industry in the progressive countries of the world Surface coating technology involves the use of various types of products such as resins oils pigments polymers varnishes plasticizers emulsions etc We have completely replaced costly petroleum solvents with water and we get cheaper finished products with no evaporation loss and fire hazards Paint is any liquid liquefiable or mastic composition which after application to a substrate in a thin layer is converted to an opaque solid film It is most commonly used to protect colour or provide texture to objects The paint industry volume in India has been growing at 15% per annum for quite some years now Varnish is one of the important parts of surface coating industry They are used to change the surface gloss making the surface more matte or higher gloss or to provide the various areas of a painting with a more unified finish Plasticizer plays an important role in the formation of polyvinylchloride PVC It is also used to plasticize the polymers Polymers are divided into three different types linear polymers branched polymers and cross linked polymers Polymer Energy system is an award winning innovative proprietary process to convert waste plastics into renewable energy On the basis of value added Indian share of plastic products industry is about 0.5% of national GDP This book basically deals with principles of film formation evaporation of solvent from a solution chemistry and properties of drying and other oils glyceride structure and film formation the size of polymer molecules processing of oil and resin inorganic pigments classification by chemical constitution azo pigments organic pigments in architectural decorative organic pigments in industrial finishes solvent requirements of specific resins convertible systems molecular structure of polymer plasticiser systems properties of plasticised polymers surface active agents optical properties rheological characteristics emulsions and other aqueous media formation of polymer emulsions modern methods of analysis etc The book presents a concise but through an overview of state of technology for surface coating This is organized into different chapters like principal of film formation chemistry and properties of drying and other oils processing of oil and resin organic pigment solvents plasticizer surface active agent surface preparations etc This book is an invaluable resource to technocrats new entrepreneurs research scholars and others concerned to this field TAGS Surface and Coatings Painting and Surface Coating Coating Surface Coating Surface Coating Plants What is Coating Production of Oils Formulation of Alkyds Production of Silicones Inorganic Pigments Organic Pigments Vat Pigments Silicate Aluminium Silicate Aluminium Potassium Silicate Mica Sulphate Barium Sulphate Solvents Plasticizers Corrosion Wood

examination in 1969 of the education and training opportunities for paint industry technicians it was recognized that the various courses available at that time did not fully serve their needs. While a few large companies had developed in-house training arrangements, the many medium and smaller firms in the raw material supply, paint manufacturing or paint user industries were unable to provide their own comprehensive training programs. With a view to improving this situation, an advisory committee comprising representatives of the Australian Paint Manufacturers Federation and the Oil and Colour Chemists Association Australia was established to liaise directly with the New South Wales Department of Technical and Further Education. As a result, plans were developed for the introduction of a Special Course in Surface Coatings Technology in 1971 conducted by the Sydney Technical College. The scope of the course was designed to cover all aspects of surface coatings technology ranging from raw materials and formulations to the production, testing, evaluation, application and use of finished products. The course proved to be highly successful and in 1973 a similar syllabus was introduced by the Melbourne School of Painting, Decorating and Signcrafts in Victoria. In 1980 New Zealand followed suit with a similar course conducted by the Auckland Technical Institute.
