Response And Stability An Introduction To The Physical Theory:

Response and Stability A. B. Pippard, 1985-10-03 This book is concerned with the response of systems in equilibrium to perturbing forces and the general theory underlying their behaviour When a system is in equilibrium it can remain motionless indefinitely until it is disturbed Then it may sink back to its original state or vibrate about the position of rest or fall over Also if the conditions governing the system are slowly changed the system will adjust itself to the alteration in a smooth fashion except at critical points where a tiny change of conditions may lead to a major alteration Important modern topics to which the author gives serious attention are elementary catastrophe theory bifurcation and chaos in the response of driven systems and phase changes especially critical points and X transitions It is Professor Pippard's belief that all practising physicists and engineers should be aware of the disconcerting possibility of real systems to behave unpredictably and this book is intended to encourage the spread of such an awareness

The Duffing Equation Ivana Kovacic, Michael J. Brennan, 2011-02-11 The Duffing Equation Nonlinear Oscillators and their Behaviour brings together the results of a wealth of disseminated research literature on the Duffing equation a key engineering model with a vast number of applications in science and engineering summarizing the findings of this research Each chapter is written by an expert contributor in the field of nonlinear dynamics and addresses a different form of the equation relating it to various oscillatory problems and clearly linking the problem with the mathematics that describe it The editors and the contributors explain the mathematical techniques required to study nonlinear dynamics helping the reader with little mathematical background to understand the text The Duffing Equation provides a reference text for postgraduate and students and researchers of mechanical engineering and vibration nonlinear dynamics as well as a useful tool for practising mechanical engineers Includes a chapter devoted to historical background on Georg Duffing and the equation that was named after him Includes a chapter solely devoted to practical examples of systems whose dynamic behaviour is described by the Duffing equation Contains a comprehensive treatment of the various forms of the Duffing equation Uses experimental analytical and numerical methods as well as concepts of nonlinear dynamics to treat the physical systems in a unified way

Nonlinear Dynamics and Chaos in Semiconductors K Aoki, 2000-12-07 The field of nonlinear dynamics and low dimensional chaos has developed rapidly over the past twenty years The principal advances have been in theoretical aspects but more recent applications in a wide variety of the sciences have been made Nonlinear Dynamics and Chaos in Semiconductors is the first book to concentrate on specific physical and ex

Nonlinear Waves in Elastic Crystals Gérard A. Maugin, 1999 The mathematical modelling of changing structures in materials is of increasing importance to industry where applications of the theory are found in subjects as diverse as aerospace and medicine This book deals with aspects of the nonlinear dynamics of deformable ordered solids known as elastic crystals where the nonlinear effects combine or compete with each other Physical and mathematical models are discussed and computational aspects are also included Different models are considered on discrete as well as continuum

scales applying heat electricity or magnetism to the crystal structure and these are analysed using the equations of rational mechanics In this way the student is introduced to the important equations of nonlinear science that describe shock waves solitons and chaos and also the non exactly integrable systems or partial differential equations A large number of problems and examples are included many taken from recent research and involving both one dimensional and two dimensional problems as well as some coupled degrees of freedom

An Introduction to the Theory of Aeroelasticity Y C Fung, 2008-10-17 Geared toward advanced undergraduates and graduate students this outstanding text surveys aeroelastic problems their historical background basic physical concepts and the principles of analysis

Computer-Assisted Simulation of Dynamic Systems with Block Diagram Languages Nicholas M. Karayanakis, 1993-06-24 Computer Assisted Simulation of Dynamic Systems with Block Diagram Languages explores the diverse applications of these indispensable simulation tools The first book of its kind it bridges the gap between block diagram languages and traditional simulation practice by linking the art of analog hybrid computation with modern pc based technology Direct analogies are explored as a means of promoting interdisciplinary problem solving The reader progresses step by step through the creative modeling and simulation of dynamic systems from disciplines as diverse from each other as biology electronics physics and mathematics The book guides the reader to the dynamic simulation of chaos conformal mapping VTOL aircraft and other highly specialized topics Alternate methods of simulating a single device to emphasize the dynamic rather than schematic features of a system are provided Nearly forgotten computational techniques like that of integrating with respect to a variable other than time are revived and applied to simulation and signal processing Actual working models are found throughout this eminently readable book along with a complete international bibliography for individuals researching subjects in dynamic systems This is an excellent primary text for undergraduate and graduate courses in computer simulation or an adjunct text for a dynamic systems course It is also recommended as a professional reference book

Managing the Insolvency Risk of Insurance Companies J. David Cummins, Richard A. Derrig, 2012-12-06 Two different applications have been considered automobile claims from Massachusetts and health expenses from the Netherlands We have fit 11 different distributions to these data The distributions are conveniently nested within a single four parameter distribution the generalized beta of the second type This relationship facilitates analysis and comparisons In both cases the GB2 provided the best fit and the Burr 3 is the best three parameter model In the case of automobile claims the flexibility of the GB2 provides a statistically significant improvement in fit over all other models In the case of Dutch health expenses the improvement of the GB2 relative to several alternatives was not statistically significant The author appreciates the research assistance of Mark Bean Young Yong Kim and Steve White The data used were provided by Richard Derrig of The Massachusetts Automobile Rating and Accident Prevention Bureau and by Bob Van der Laan and The Silver Cross Foundation for the medical insurance claim data
