Big Pharma, Women, and the Labour of Love Thea Cacchioni, 2015-07-27 In 2010 Thea Cacchioni testified before the US Food and Drug Administration against flibanserin a drug proposed to treat low sexual desire in women dubbed by the media the pink Viagra She was one of many academics and activists sounding the alarm about the lack of science behind the search for potentially lucrative female sexual enhancement drugs In her book Big Pharma Women and the Labour of Love Cacchioni moves beyond the search for a sexual pharmaceutical drug for women to ask a broader question how does the medicalization of female sexuality already affect women's lives Using in depth interviews with doctors patients therapists and other medical practitioners Cacchioni shows that whatever the future of the pink Viagra heterosexual women often now feel expected to take on the job of managing their and their partners sexual desires Their search for sexual pleasure can be a labour of love work that is enjoyable for some but a chore for others An original and insightful take on the burden of heterosexual norms in an era of compulsory sexuality Cacchioni's investigation should open up a wide ranging discussion about the true impact of the medicalization of sexuality

New Developments in Evolutionary Innovation Gino Cattani, Mariano Mastrogiorio, 2021-05-13 The growth of evolutionary thinking has had a profound impact on economic theory and related fields such as strategy and technological innovation An important paradigm that underlies the evolutionary theory of innovation is neo Darwinian evolution According

to this paradigm evolution is gradualist and based on the mechanisms of variation selection and retention Since the 1970s theoretical advancements in evolutionary biology have recognised the central role of punctuated equilibrium speciation and exaptation However despite their significant influence in evolutionary biology these advancements have been reflected only partially in evolutionary approaches to economics strategy and innovation The aim of this book is to review these advancements and explore their implications with a particular emphasis on the role of serendipity and unprestatability in innovation and novelty creation

The Quest for Sexual Health Steven Epstein, 2022-03-23 Offering an

entryway into the distinctive worlds of sexual health and a window onto their spillover effects sociologist Steven Epstein traces the development of the concept and parses the debates that swirl around it Since the 1970s health professionals researchers governments advocacy groups and commercial interests have invested in the pursuit of something called sexual health Under this expansive banner a wide array of programs have been launched organizations founded initiatives funded products sold and yet no book before this one asks What does it mean to be sexually healthy When did people conceive of a form of health called sexual health And how did it become the gateway to addressing a host of social harms and the reimagining of private desires and public dreams Conjoining sexual with health changes both terms it alters how we conceive of sexuality and transforms what it means to be healthy prompting new expectations of what medicine can provide Yet the ideal of achieving sexual health remains elusive and open ended and the benefits and costs of promoting it are unevenly distributed across genders races and sexual identities Rather than a thing apart sexual health is intertwined with nearly every conceivable topical debate from sexual dysfunction to sexual violence from reproductive freedom to the practicalities of sexual contact in a pandemic In this book Steven Epstein analyzes the rise proliferation uptake and sprawling consequences of sexual health activities offering critical tools to assess those consequences expand capacities for collective decision making and identify pathways that promote social justice The Prescription-to-Prison Pipeline Michelle

Smirnova,2023-02-23 In *The Prescription to Prison Pipeline* Michelle Smirnova argues that the ongoing opioid drug epidemic is the result of an endless cycle in which suffering is medicalized and drug use is criminalized Drawing on interviews with eighty incarcerated individuals in Missouri correctional institutions Smirnova shows how contradictions in medical practices social ideals and legal policies disproportionately criminalize the poor for their social condition This criminalization further exacerbates and perpetuates drug addiction and poverty Tracing the processes by which social issues are constructed as biomedical ones that necessitate pharmacological intervention Smirnova highlights how inequitable surveillance policing and punishment of marginalized populations intensify harms associated with both treatment and punishment especially given that the distinctions between the two have become blurred By focusing on the stories of people whose pain and pharmaceutical treatment led to incarceration Smirnova challenges the binary of individual and social problems effectively exploring how the conceptualization diagnosis and treatment of substance use may exacerbate outcomes such as relapse recidivism poverty abuse and death *Handbook of Sociology and Human Rights* David L. Brunsma,Keri E. Lyall Smith,Brian K

Gran,2015-10-23 Long the province of international law human rights now enjoys a renaissance of studies and new perspectives from the social sciences This landmark book is the first to synthesize and comprehensively evaluate this body of work It fosters an interdisciplinary international and critical engagement both in the social study of human rights and the establishment of a human rights approach throughout the field of sociology Sociological perspectives bring new questions to the interdisciplinary study of human rights as amply illustrated in this book The Handbook is indispensable to any

interdisciplinary collection on human rights or on sociology This text Brings new perspectives to the study of human rights in an interdisciplinary fashion Offers state of the art summaries critical discussions of established human rights paradigms and a host of new insights and further research directions Fosters a comprehensive human rights approach to sociology topically representing all 45 sections of the American Sociological Association *Our Grandchildren Redesigned* Michael Bess, 2016-09-06 A panoramic overview of biotechnologies that can endlessly boost human capabilities and the drastic changes these superhuman traits could trigger Biotechnology is moving fast In the coming decades advanced pharmaceuticals bioelectronics and genetic interventions will be used not only to heal the sick but to boost human physical and mental performance to unprecedented levels People will have access to pills that make them stronger and faster informatic devices will interface seamlessly with the human brain and epigenetic modification may allow people to reshape their own physical and mental identities at will Until recently such major technological watersheds like the development of metal tools or the industrialization of manufacturing came about incrementally over centuries or longer People and social systems had time to adapt they gradually developed new values norms and habits to accommodate the transformed material conditions But contemporary society is dangerously unprepared for the dramatic changes it is about to experience down this road on which it is already advancing at an accelerating pace The results will no doubt be mixed People will live longer healthier lives will fine tune their own thought processes and will generate staggeringly complex and subtle forms of knowledge and insight But these technologies also threaten to widen the rift between rich and poor to generate new forms of social and economic division and to force people to engage in constant cycles of upgrades and boosts merely to keep up Individuals who boost their traits beyond a certain threshold may acquire such extreme capabilities that they will no longer be recognized as unambiguously human In this important and timely book prize winning historian Michael Bess provides a clear nontechnical overview of cutting edge biotechnology and paints a vivid portrait of a near future society in which bioenhancement has become a part of everyday life He surveys the ethical questions raised by the enhancement enterprise and explores the space for human agency in dealing with the challenges that these technologies will present Headed your way over the coming decades new biotechnologies that can powerfully alter your body and mind The possibilities are tantalizing Rejuvenation therapies offering much longer lives 160 and even beyond in full vigor and mental acuity Cognitive enhancement through chemical or bioelectronic means the rough equivalent of doubling or tripling IQ scores Epigenetic tools for altering some of your genetically influenced traits at any point in your lifetime body shape athletic ability intelligence personality Bioelectronic devices for modulating your own brain processes including your pleasure centers a potentially non stop high Direct control of machines by thought and perhaps direct communication with other people brain to brain a new dimension of sharing and intimacy But some of the potential consequences are also alarming A growing rift between the biologically enhanced and those who can't afford such modifications A constant cycle of upgrades and boosts as the bar of

normal rises ever higher Humans 95 Humans XP Humans 8 The fragmentation of humankind into rival bioenhancement clusters A gradually blurring boundary between person and product Extreme forms of self modification with some individuals no longer recognized as unambiguously human
