Simonović, 2009 First Published in 2008 Routledge is an imprint of Taylor Francis an informa company Life From, For and To Water Janos J. Bogardi, 2025-05-23 This book is translated from Hungarian. It was originally published as the sixth volume of the Building the Future in Water Resources Management series of the Water Science Council of the Hungarian Water Resources Management Directorate. It presents the water resources management of the last 50 plus years as seen experienced co shaped and narrated by Janos Bogardi a research professor of the Ludovika University of Public Service in Budapest. The author is simultaneously co opted professor at the University of Bonn and distinguished adjunct professor of the Asian Institute of Technology Pathumthani Thailand. Born into a water resources engineering family and growing up in Budapest close to the Danube river pre determined his professional orientation. He describes with light irony and without the usual memoir style his search for a fulfilling professional life. He discusses his engagement with the inter university cooperation helping the transition of Central European universities earning him numerous academic recognitions. Dr Bogardi's career culminated with assignments as science diplomat and manager working at UNESCO with local scientists in Central Asia Russia and in Africa. He served as

founding director of the UNU Institute for Environment and Human Security The book concludes with reminiscences to those whose influence and collaboration shaped Dr Bogardi's career Tropical Glaciers Georg Kaser, Henry Osmaston, 2002

Glaciers in the tropics and their environmental consequences The Foreseeable Future for Water Planning Andrew James Segrave, 2014-09-14

People and societies conceptualise and experience time in fundamentally different ways This basic aspect of perception significantly influences the way we frame problems and conceive solutions This book shows how time perspectives differ across national cultures and across professional roles It shows how these differences generate ambiguity when it comes to defining problems and devising solutions in the water sector This is especially important when dealing with problems such as Sustainable Water Resources Management and Climate Change that involve culturally and professionally diverse stakeholders Response strategies to such problems inherently require concerted action because of the large spatial and temporal scale on which they take place and to minimise the occurrence of conflicting interventions This disparity between diverse problem perceptions and the need for collective understanding and united action is increasingly recognised as an important concern in the field of water resource management The conclusions are important because the time horizons considered in planning and setting research agendas influence what problems are perceived what questions are asked and what solutions are sought In general more time needs to be invested in framing problems This is particularly important for participatory planning and transdisciplinary research where the diversity in Motivational Space is greatest It is recommended that Motivational Space be collectively and explicitly framed from the outset of all planning projects especially in terms of Temporal Extent When it comes to setting research agendas it is important to match the Motivational Space of those who prioritize the questions with the goal of the research programme Author Andrew James Segrave KWR Watercycle Research Institute Utrecht The Netherlands Handbook of Knowledge Management for Sustainable Water Systems Meir Russ, 2018-01-18

A comprehensive synthesis of the best practices for management in the vital and rapidly growing field of sustainable water systems Handbook of Knowledge Management for Sustainable Water Systems offers an authoritative resource that goes beyond the current literature to provide an interdisciplinary approach to the topic The text explores the concept of knowledge management as a key asset and a crucial component of organizational strategy as applied to the sustainability of water systems Using the knowledge management framework the authors discuss socio hydrology sustainable water systems that reflect the present political economic and technological reality The book draws on contributors from a number of disciplines including economic development financial systems networks IT IS data analytics behavioral social water systems governance systems and related ecosystems This vital resource Contains a multifaceted approach that draws on a number of disciplines and contains contributions from experts in their various fields Offers a coherent approach that discusses the dynamic concept of sustainability drawing on data from people systems and processes of diverse water systems Includes a comprehensive review of the topic and offers a platform for dialog between theory and empirical analysis Explores

opportunities for multi constituent synthesis This book is written for regulators water utility practitioners researchers and students interested in the fledgling field of knowledge management and sustainable water systems and those who want to improve the effective and efficient management of a complex water system Climate Change and Himalaya: Natural Hazards and Mountain Resources J. Sundaresan,P. Gupta,K.M. Santosh,R.
