Sensory Neurophysiology With Special Reference To The Cat:

Sensory Neurophysiology; with Special Reference to the Cat James C. Boudreau, Chiyeko Tsuchitani, 1973 *Hearing, Speech, and Communication Disorders* Information Center for Hearing Speech and Disorders, 2012-12-06 Information analysis centers were developed to help the scientist and practitioner cope with the ever increasing mass of published and unpublished information in a specific field Their establishment resulted from a further extension of those pressures that had brought about the formation of the specialized primary journal and the abstracting services at the turn of the century The information analysis center concept was greatly advanced by the 1963 report of the President's Science Advisory Committee Panel on Science Information This report stated scientific interpreters who can collect relevant data review a field and distill information in a manner that goes to the heart of a technical situation are more help to the overburdened specialist than is a mere pile of relevant documents Such specialized information centers are operated in closest possible contact with working scientists in the field These centers not only furnish information about ongoing research and disseminate and retrieve information but also create new information and develop new methods of information analysis synthesis and dissemination The continually expanding biomedical literature produced by scientists from the world's laboratories research centers and medical centers led the National Institute of Neurological Diseases and Stroke in 1964 to initiate a National Neurological Information Network of specialized centers for neurological information The Centers are designed to bring under control and to promote ready access to important segments of the literature

Stein, 2012-06-01 The major reference work for a rapidly advancing field synthesizes central themes reports on current findings and offers a blueprint for future research Scientists attempts to understand the physiology underlying our apprehension of the physical world was long dominated by a focus on the individual senses The 1980s saw the beginning of systematic efforts to examine interactions among different sensory modalities at the level of the single neuron And by the end of the 1990s a recognizable and multidisciplinary field of multisensory processes had emerged More recently studies involving both human and nonhuman subjects have focused on relationships among multisensory neuronal ensembles and their behavioral perceptual and cognitive correlates The New Handbook of Multisensory Processing synthesizes the central themes in this rapidly developing area reports on current findings and offers a blueprint for future research The contributions all of them written for this volume by leading experts reflect the evolution and current state of the field This handbook does more than simply review the

field Each of the volume s eleven sections broadly surveys a major topic and each begins with a substantive and thought provoking commentary by the section editor that identifies the major issues being explored describes their treatment in the chapters that follow and sets these findings within the context of the existing body of knowledge Together the commentaries and chapters provide an invaluable guide to areas of general agreement unresolved issues and topics that remain to be explored in this fast moving field

Neuropeptides in the Spinal Cord F. Nyberg,Hari Shanker Sharma,Z. Wiesenfeld-Hallin,1995 This is the first book devoted exclusively to examining the role of neuropeptides in the spinal cord Great progress has been made recently in our understanding of the role of neuropeptides in neurotransmission New tools have been developed to help study the function of endogenous neuropeptides in health and disease Because the general organization of the spinal cord is well conserved among species and neuropeptides appear to have a major role in spinal neurotransmission this book is a timely compendium of recent research in this field The volume will help to stimulate further research in the field of neuropeptides which will lead to better

understanding of this role in health and disease

Progress in Motor Control: Bernstein's traditions in movement studies Mark L. Latash, 1998 Contributors of the 16 papers were charged with reviewing urgent problems of motor control rather than reporting on their own research in order to produce a broad reference for professionals and graduate students in the field Four of them worked directly with Nikolai Bernstein 1896-1966 the Russian scientist who first worked in the field and who

Functional Neuroscience E. Roy John, Robert W. Thatcher, Thalía Harmony, 2022-07-30 The late E Roy John is considered the pioneer in the field of neurometrics the science of measuring the underlying organization of the brain's electrical activity Volume 1 co-authored by Robert W Thatcher and Volume 2 both originally published in 1977 were among the first books in this field Volume 3 written by colleague Thalía Harmony followed in 1984 The field expanded significantly in the 1990s and thousands of articles have subsequently been published Available together for the first time these 3 volumes were important foundational works for the fields of quantitative electrophysiology and neurometrics

Neuroanatomy and Neurophysiology of the Larynx Yasuo Hisa, 2016-11-08 This book is a concise but detailed treatise on the laryngeal nervous system It is ideal for researchers starting work in this field in that it provides a quick update on present day basic neurolaryngology A brief introduction to the methodology that made recent progress possible is followed by a review of classical basic neuroanatomy and neurophysiology Additionally the book provides some of the most recent findings in neurolaryngology The many illustrative figures and microscopic photographs help readers to achieve a clearer understanding of the text and ample references provide links to further reading in specific areas of the field The book contains much general material that will be instructive even for researchers not specializing in basic neurolaryngology and will provide an essential grounding for clinicians in laryngology

Integrative Neuroscience Evian Gordon, 2003-09-02 Most brain-related activity has focussed on specialized interests within individual disciplines Recent multidisciplinary activity has provided the impetus to break down these boundaries and encourage a freer exchange of information across disciplines This text reflects these developments It spans the landscape of brain science to provide core information from 12 disciplines including evolution philosophy anatomy chemistry computer science brain dynamics psychology neurology psychiatry psychotherapy and brain imaging In outlining how and why it is now possible to realistically model aspects of the brain's dynamics from such a wide range of intellectual endeavors this book will prove itself useful to undergraduates postgraduates and all those seeking a contemporary perspective and evaluation of the current status and future directions in the brain sciences

Motor Coordination Arnold L. Towe, Erich S. Luschei, 2013-11-21 The focus of this volume differs from what is suggested by the series title for it is on muscle contraction and movement rather than on behavior The lone overnight flight of a ruby-throated hummingbird across the Gulf of Mexico is a migratory behavior mediated through an incredibly lengthy repetitive series of wing movements each movement being produced by a complex sequence of muscle contractions It is significant that these same movements may be used to mediate other behaviors and that these same muscle contractions in different sequence may

be used to produce other movements The immense journey of white bearded gnus across the Serengeti plains to suitable calving grounds is likewise a migratory behavior mediated through rather more varied yet repetitive limb movements each produced by a complex sequence of muscle contractions Again these same movements may be used to mediate other behaviors and again the details of each limb movement may be varied through variations in the strength and the sequence of muscle contractions A laboratory rat may learn to perform an escape behavior in a shuttle box bringing its performance to a high level of efficiency by modifying its movement on successive trials After intraperitoneal injection of pentobarbital sodium in an amount sufficient to render the animal severely incoordinated the escape behavior is still performed albeit through a different sequence of movements even to rolling out of the compartment in response to the warning signal
