The field of augmentative communication, which is rapidly gaining recognition in all areas of rehabilitation, is thoroughly addressed here. A summary of the prerequisites for implementing a communication system will be particularly useful to anyone working with nonspeaking clients who do not yet have a method of communication. Included among the topics are assessing cognitive function in clients unable to take intelligence tests in standardized fashion; finding a match between the motor capabilities of the client and the motor demands of various aided and unaided communication systems; and promoting the involvement of the family in the development of a communication system. This indispensable resource also offers information about publication equipment vendors and the American Speech Language Hearing Association (ASHA), the primary leader in augmentative communication. *Effective SLP Interventions for Children with Cerebral Palsy* Fran Redstone, 2014-03-27 **Journal of Rehabilitation Research and Development**, 1988 *Journal of Rehabilitation R & D*, 1989 **Untie the Elderly**, 1990 **Occupational Therapy for People with Eating Dysfunctions** Florence S.
