Math for the Folks: Slow to Anger Quick to Rise Vincent C. Jones,2021-12-29 Math For the Folks Slow to Anger Quick to Rise is a composition of essays poems and sermons covering my own perilous journey with the mathematical craft over the last few years It is not a mathematics textbook per say and as such I hope that the reader remains undaunted and therefore inspired by the various avenues of my thought process that go far beyond mathematics and into other areas of life Further staying true to my own childhood beliefs and conceptions I pray that this book reads like a journal that outlines many themes of the American experience among which are sports family math music politics and most importantly my relationship to myself others and a God placed high above me Enjoy There will be much more to come

Mobile Learning and STEM Helen Crompton,John Traxler,2015-12-07 In recent years there has been a renewed focus on STEM education in the United States fueled by evidence that young learners competencies in science technology engineering and mathematics are falling behind those of their global peers Scholars and practitioners are beginning to utilize the new pedagogical opportunities offered by mobile learning to improve the successes of teachers and K 12 students across STEM subjects Mobile Learning and STEM Case Studies in Practice is a comprehensive collection of case

studies that explore mobile learning's support of STEM subjects and that utilize mobile technology to facilitate unique and effective K-12 teaching and learning experiences. In addition to its focus on STEM achievement for researchers, this volume is a resource for teachers working to implement mobile learning initiatives into their classrooms. Mobile Learning and STEM also includes research that is applicable to classrooms in nations around the world where few students from underrepresented racial and socioeconomic backgrounds are entering into STEM jobs. Concluding with a summary of its research and its implications to future scholarship and practice, this book is a springboard for practitioners, specialists, higher education instructors, and researchers who want to establish better practices in schools and raise student achievement in STEM subjects.

Basic Skills Education in Community Colleges W. Norton Grubb, Robert Gabriner, 2013. Nearly two thirds of students require some form of remediation before taking college level classes, and community colleges have become increasingly important in providing this education. Unfortunately, relatively few students complete the developmental courses required to make a transition to college level work. Based on a three year study of over twenty community colleges, *Basic Skills Education in Community Colleges* analyzes developmental education practices, exploring what goes wrong and what goes right, and provides a series of recommendations for improved practice. Including both classroom observations and interviews with administrators, faculty, and students, this valuable book balances critique with examples of innovation. Part One explores the instructional settings of basic skills: the use of drill and practice and remedial pedagogy in math, reading, writing, and ESL, as well as innovations in colleges that show developmental education need not follow remedial pedagogy. Part Two examines institutional factors shaping basic skills and provides recommendations for improving the quality of basic skills instruction. The research grounded observations and recommendations in *Basic Skills Education in Community Colleges* make this an invaluable resource for scholars, administrators, and faculty aiming to help students progress through developmental education to college level work and beyond.
