**Quinine** Fiammetta Rocco,2004-08-17 Quinine The Jesuits discovered it The Protestants feared it The British vied with the Dutch for it and the Nazis seized it Because of quinine medicine warfare and exploration were changed forever For more than one thousand years there was no cure for malaria In 1623 after ten cardinals and hundreds of their attendants died in Rome while electing Urban VII the new pope he announced that a cure must be found He encouraged Jesuit priests establishing new missions in Asia and in South America to learn everything they could about how the local people treated the disease and in 1631 an apothecarist in Peru named Agostino Salumbrino dispatched a new miracle to Rome The cure was quinine an alkaloid made from the bitter red bark of the cinchona tree From the quest of the Englishmen who smuggled cinchona seeds out of South America to the way in which quinine opened the door to Western imperial adventure in Asia Africa and beyond and to malaria s effects even today award winning author Fiammetta Rocco deftly chronicles the story of this historically ravenous disease

**Power over Peoples** Daniel R. Headrick, 2012-06-28 A major history of technology and Western conquest For six hundred years the nations of Europe and North America have periodically attempted to coerce invade or conquer other societies They have relied on their superior technology to do so yet these technologies have not always guaranteed success Power over Peoples examines Western

imperialism's complex relationship with technology from the first Portuguese ships that ventured down the coast of Africa in the 1430s to America's conflicts in the Middle East today. Why did the sailing vessels that gave the Portuguese a century-long advantage in the Indian Ocean fail to overcome Muslim galleys in the Red Sea? Why were the same weapons and methods that the Spanish used to conquer Mexico and Peru ineffective in Chile and Africa? Why didn't America's overwhelming air power assure success in Iraq and Afghanistan? In *Power over Peoples*, Daniel Headrick traces the evolution of Western technologies from muskets and galleons to jet planes and smart bombs and sheds light on the environmental and social factors that have brought victory in some cases and unforeseen defeat in others. He shows how superior technology translates into greater power over nature and sometimes even other peoples, yet how technological superiority is no guarantee of success in imperialist ventures because the technology only delivers results in a specific environment or because the society being attacked responds in unexpected ways. Breathtaking in scope, *Power over Peoples* is a revealing history of technological innovation, its promise and limitations, and its central role in the rise and fall of empire. Conventional scholarship on the Mediterranean portrays the Inner Sea as a timeless entity with unchanging ecological and agrarian features. But Faruk Tabak argues some of the traditional and olden characteristics that we attribute to it today are actually products of relatively recent developments. Locating the shifting fortunes of Mediterranean city states and empires in patterns of long-term economic and ecological change, this study shows how the quintessential properties of the basin—the trinity of cereals, tree crops, and small livestock—were reestablished as the Mediterranean's importance in global commerce, agriculture, and politics waned. Tabak narrates this history not from the vantage point of colossal empires but from that of the mercantile republics that played a pivotal role as empire-building city states. His unique juxtaposition of analyses of world economic developments that flowed from the decline of these city states and the ecological change associated with the Little Ice Age depicts large-scale long-term social change. Integrating the story of the western and eastern Mediterranean from Genoa and the Habsburg empire to Venice and the Ottoman and Byzantine empires, Tabak unveils the complex process of devolution and regeneration that brought about the eclipse of the Mediterranean. **The Andean Wonder Drug** Matthew

James Crawford, 2016-09-07 In the eighteenth century, malaria was a prevalent and deadly disease, and the only effective treatment was found in the Andean forests of Spanish America: a medicinal bark harvested from cinchona trees that would later give rise to the antimalarial drug quinine. In 1751, the Spanish Crown asserted control over the production and distribution of this medicament by establishing a royal reserve of fever trees in Quito. Through this pilot project, the Crown pursued a new vision of imperialism informed by science and invigorated through commerce. But ultimately, this project failed much like the broader imperial reforms that it represented. Drawing on extensive archival research, Matthew Crawford explains why, showing how indigenous healers, laborers, merchants, colonial officials, and creole elites contested European

science and thwarted imperial reform by asserting their authority to speak for the natural world The Andean Wonder Drug uses the story of cinchona bark to demonstrate how the imperial politics of knowledge in the Spanish Atlantic ultimately undermined efforts to transform European science into a tool of empire
