Radar Detection:

Radar Detection Theory of Sliding Window Processes Graham Weinberg, 2017-09-27 Constant false alarm rate detection processes are important in radar signal processing Such detection strategies are used as an alternative to optimal Neyman Pearson based decision rules since they can be implemented as a sliding window process running on a radar range Doppler map This book examines the development of such detectors in a modern framework With a particular focus on high resolution X band maritime surveillance radar recent approaches are outlined and examined Performance is assessed when the detectors are run in real X band radar clutter The book introduces relevant mathematical tools to allow the reader to understand the development and follow its implementation [Advances in Adaptive Radar Detection and Range Estimation](#)

Chengpeng Hao, Danilo Orlando, Jun Liu, Chaoran Yin, 2021-12-03 This book provides a comprehensive and systematic framework for the design of adaptive architectures which take advantage of the available a priori information to enhance the detection performance Moreover this framework also provides guidelines to develop decision schemes capable of estimating the target position within the range bin To this end the readers are driven step by step towards those aspects that have to be accounted for at the design stage starting from the exploitation of system and or environment information up to the use of target energy leakage energy spillover which allows inferring on the target position within the range cell under test In addition to design issues this book presents an extensive number of illustrative examples based upon both simulated and real recorded data Moreover the performance analysis is enriched by considerations about the trade off between performances and computational requirements Finally this book could be a valuable resource for PhD students researchers professors and more generally engineers working on statistical signal processing and its applications to radar systems *Adaptive Radar Detection: Model-Based, Data-Driven and Hybrid Approaches* Angelo Coluccia, 2022-11-30 This book shows you how to adopt data driven techniques for the problem of radar detection both per se and in combination with model based approaches In particular the focus is on space time adaptive target detection against a background of interference consisting of clutter possible jammers and noise It is a handy concise reference for many classic model based adaptive radar detection schemes as well as the most popular machine learning techniques including deep neural networks and helps you identify suitable data driven approaches for radar detection and the main related issues You ll learn how data driven tools relate to and can be coupled or hybridized with traditional adaptive detection statistics understand fundamental concepts schemes and algorithms from statistical learning classification and neural networks domains The book also walks you through how these concepts and schemes have been adapted for the problem of radar detection in the literature and provides you with a methodological guide for the design illustrating different possible strategies You ll be equipped to develop a unified view under which you can exploit the new possibilities of the data driven approach even using simulated data This book is an excellent resource for Radar professionals and industrial researchers postgraduate students in electrical engineering and the
