RoboCup 2008: Robot Soccer World Cup XII

Luca Iocchi, Hitoshi Matsubara, Alfredo Weitzenfeld, Changjiu Zhou, 2009-06-24. The 12th annual RoboCup International Symposium was held during July 15-18, 2008, in conjunction with RoboCup 2008 Competitions and Demonstrations. The symposium represents the core meeting for the presentation and discussion of scientific contributions in diverse areas related to the main threads within RoboCup: Soccer, Rescue, Home and Junior. Its scope encompassed but was not restricted to research and education activities within the fields of artificial intelligence and robotics. A fundamental aspect of RoboCup is promoting science and technology among young students and researchers, in addition to providing a forum for discussion and excitement about Robotics with practitioners from all over the world. Since its first edition in 1997 in Nagoya, the RoboCup Competitions and Symposium have attracted an increasing number of researchers and students from all the world, and today it is a major event in robotics worldwide. Due to its interdisciplinary nature and the exploration of various and intimate connections of theory and practice across a wide spectrum of different fields, the symposium offered an excellent opportunity to introduce new techniques to various scientific disciplines. The experimental, interactive, and benchmark character of the RoboCup initiative created the opportunity to present, learn, and evaluate novel ideas and approaches with significant potential. If promising, they are then rapidly adopted and field tested by a large and still strongly growing community.

Albright,1993-10-31 Calibration is playing an increasingly important role in industrial robotics Higher accuracy demands are being placed on flexible assembly and manufacturing systems which in turn require robot manufacturers to produce higher quality precision robots **Complex Behavior in Evolutionary Robotics** Lukas König,2015-03-30 Today autonomous

robots are used in a rather limited range of applications such as exploration of inaccessible locations cleaning floors mowing lawns etc However ongoing hardware improvements and human fantasy steadily reveal new robotic applications of significantly higher sophistication For such applications the crucial bottleneck in the engineering process tends to shift from physical boundaries to controller generation As an attempt to automatize this process Evolutionary Robotics has successfully been used to generate robotic controllers of various types However a major challenge of the field remains the evolution of truly complex behavior Furthermore automatically created controllers often lack analyzability which makes them useless for safety critical applications In this book a simple controller model based on Finite State Machines is proposed which allows a straightforward analysis of evolved behaviors To increase the model s evolvability a procedure is introduced which by adapting the genotype phenotype mapping at runtime efficiently traverses both the behavioral search space as well as recursively the search space of genotype phenotype mappings Furthermore a data driven mathematical framework is proposed which can be used to calculate the expected success of evolution in complex environments Robot Sex John
