Real People Working In Science:

Real-Life Science Mysteries Colleen Kessler, 2021-09-09 Real Life Science Mysteries puts an exciting new spin on scientific thinking by profiling real life scientists showing students in grades 5-8 ways they can use science in their everyday lives. From a biologist studying the habits of garter snakes in Manitoba, Canada to a landscape designer and greenhouse owner in Ohio, the scientists in this book share information and solutions to the thorniest problems they face in their scientific careers. With the more than 30 activities included in Real Life Science Mysteries, students will be required to try their hand at solving common science problems and performing experiments while learning about real people from diverse backgrounds, all of whom share a love for discovering how things work and how they can work better. This book is perfect for any science classroom or young scientists looking to increase their knowledge. Grades 5-8 **Adult Education**

Teachers Rebecca Rogers, Mary Ann Kramer, 2020-08-11 This book examines the literacy practices of exemplary adult education teachers working within critical literacy frameworks. It provides an in-depth look at the complexity of adult literacy education through the lenses of these teachers. An understanding of this complexity helps teachers design literacy practices in classrooms on a daily basis. This is an important book for there is considerable pedagogical and political attention focused on adult literacy education at this time. As the field of adult education continues to grapple with issues of teacher professionalization and certification, it adds a much-needed teacher perspective. Appropriate as a text for adult education courses, this volume will also appeal to researchers, teacher educators, practitioners, and graduate students across the field of literacy education.

From Grammar to Science Victor H. Yngve, 1996-01-01 Although efforts have been under way for the past two centuries to treat language scientifically, linguists and others who work with language, speech, or communication have not found an adequate scientific foundation in current linguistic theory. Many of the difficulties are caused by longstanding confusions between the logical domain of science and grammar and the physical domain of sound waves and the people who speak and understand. In this book, therefore, the last impediments of tradition, the ancient semiotic grammatical foundations of linguistics, are set aside. We move into the physical domain where theories and hypotheses can be tested against observations of the physical reality. Here, new foundations are laid that are fully consonant with modern science as practiced in physics, chemistry, and biology. On these foundations is built a structure of testable, specific, dynamic causal laws of communicative behavior that provides support for treating previously recalcitrant context-dependent semantic, pragmatic, interactive, rhetorical, and literary phenomena. The central role of context in the foundations of the theory provides the insights of scientific lawfulness while still honoring the particularity of situations celebrated in the humanities. Drive and Curiosity Istvan Hargittai, 2010-04-13 What motivates those few scientists who rise above their peers to achieve breakthrough discoveries This book examines the careers of fifteen eminent scientists who achieved some of the most notable discoveries of the past century providing an insider's perspective on the history of twentieth century science based on these engaging personality profiles They include Dan Shechtman the 2011 Nobel laureate and discoverer of quasicrystals James D Watson the Nobel laureate and codiscoverer of the double helix structure of DNA Linus Pauling the Nobel laureate remembered most for his work on the structure of proteins Edward Teller a giant of the 20th century who accomplished breakthroughs in understanding of nuclear fusion George Gamow a pioneering scientist who devised the initially ridiculed and now accepted Big Bang In each case the author has uncovered a singular personality characteristic motivational factor or circumstance that in addition to their extraordinary drive and curiosity led these scientists to make outstanding contributions For example Gertrude B Elion who discovered drugs that saved millions of lives was motivated to find new medications after the deaths of her grandfather and later her fianc F Sherwood Rowland who stumbled upon the environmental harm caused by chlorofluorocarbons eventually felt a moral imperative to become an environmental activist Rosalyn Yalow the codiscoverer of the radioimmunoassay always felt she had to prove herself in the face of prejudice against her as a woman These and many more fascinating revelations make this a must read for everyone who wants to know what traits and circumstances contribute to a person's becoming the scientist who makes the big breakthrough **Thinking Practices in Mathematics and Science Learning** James G. Greeno, Shelley V. Goldman, 2013-04-03 The term used in the title of this volume thinking practices evokes questions that the authors of the chapters within it begin to answer What are

thinking practices What would schools and other learning settings look like if they were organized for the learning of thinking practices Are thinking practices general or do they differ by disciplines If there are differences what implications do those differences have for how we organize teaching and learning How do perspectives on learning cognition and culture affect the kinds of learning experiences children and adults have This volume describes advances that have been made toward answering these questions These advances involve several agendas including increasing interdisciplinary communication and collaboration reconciling research on cognition with research on teaching learning and school culture and strengthening the connections between research and school practice The term thinking practices is symbolic of a combination of theoretical perspectives that have contributed to the volume editors understanding of how people learn how they organize their thinking inside and across disciplines and how school learning might be better organized By touring through some of the perspectives on thinking and learning that have evolved into school learning designs Greeno and Goldman begin to establish a frame for what they are calling thinking practices This volume is a significant contribution to a topic that they believe will continue to emerge as a coherent body of scientific and educational research and practice

Connie Willis's Science Fiction Carissa Turner Smith, 2022-10-31 In spite of Connie Willis's numerous science fiction awards and her groundbreaking history as a woman in the field there is a surprising dearth of critical publication surrounding her work Taking Doomsday Book as its cue this collection argues that Connie Willis's most famous novel along with the rest of her oeuvre performs science fiction's task of cognitive estrangement by highlighting our human inability to read the times correctly and yet also affirming the ethical imperative to attempt to truly observe and record our temporal location Willis's fiction emphasizes that doomsdays happen every day and they risk being forgotten by some even as their trauma repeats for others However disasters also have the potential to upend accepted knowledge and transform the social order for the better and this collection considers the ways that Willis pairs comic and tragic modes to reflect these uncertainties

Baumberg, 2018-05-15 A revealing and provocative look at the current state of global science We take the advance of science as given But how does science really work Is it truly as healthy as we tend to think How does the system itself shape what scientists do The Secret Life of Science takes a clear eyed and provocative look at the current state of global science shedding light on a cutthroat and tightly tensioned enterprise that even scientists themselves often don't fully

understand *The Secret Life of Science* is a dispatch from the front lines of modern science. It paints a startling picture of a complex scientific ecosystem that has become the most competitive free market environment on the planet. It reveals how big this ecosystem really is, what motivates its participants, and who reaps the rewards. Are there too few scientists in the world or too many? Are some fields expanding at the expense of others? What science is shared or published, and who determines what the public gets to hear about? What is the future of science? Answering these and other questions, this controversial book explains why globalization is not necessarily good for science, nor is the continued growth in the number of scientists. It portrays a scientific community engaged in a race for limited resources that determines whether careers are lost or won, whose research visions become the mainstream, and whose vested interests end up in control. *The Secret Life of Science* explains why this hypercompetitive environment is stifling the diversity of research and the resiliency of science itself, and why new ideas are needed to ensure that the scientific enterprise remains healthy and vibrant. *McLuhan's Galaxies:*

Science Fiction Film Aesthetics in Light of Marshall McLuhan's Thought Artur Skweres, 2019-01-17 This groundbreaking book uses observations made by Marshall McLuhan to analyze the aesthetics of science fiction films, treating them as visual metaphors or probes into the new reality dominated by electronic media. It considers the relations between the senses and sensuality in *Blade Runner*, the visually tactile character of the film, and the status of replicants as humanity's new clothes. It analyzes the mixture of Eastern and Western aesthetics in *Star Wars*, analyzing Darth Vader as a combination of the literate and the tribal mindset. It discusses the failure of visual society presented in the *Terminator* and *Alien* franchises, the rekindling of horror vacui, tribalism, and the desire to obliterate the past as a result of the simultaneity of the acoustic space. Finally, the book discusses the *Matrix* trilogy and *Avatar* as being deeply related in terms of the growing importance of tactility, easternization, tribalization, as well as connectivity and the implosion of human civilization. **The Book of Popular Science**, 1926

Anthropology and Political Science Myron J. Aronoff, Jan Kubik, 2013 What can anthropology and political science learn from each other The authors argue that collaboration particularly in the area of concepts and methodologies is tremendously beneficial for both disciplines though they also deal with some troubling aspects of the relationship Focusing on the influence of anthropology on political science the book examines the basic assumptions the practitioners of each discipline make about the nature of social and political reality compares some of the key concepts each field employs and provides an extensive review of the basic methods of research that bridge both disciplines ethnography and case study Through ethnography participant observation reliance on extended case studies and the use of anthropological concepts and sensibilities a greater understanding of some of the most challenging issues of the day can be gained For example political anthropology challenges the illusion of the autonomy of the political assumed by political science to characterize so called modern societies Several chapters include a cross disciplinary analysis of key concepts and issues political culture political ritual the politics of collective identity democratization in divided societies conflict resolution civil society and the politics of post Communist transformations
