Posibilidad de la realidad virtual en entornos BIM. Soraya Jeannette Araujo Criollo,2017 Para hablar de realidad virtual aumentada y buscar la manera de c mo conectar con la metodolog a BIM primero hay que definir qu es cada elemento c mo se utilizan y en qu sectores De forma simplificada la realidad virtual es la recreaci n de un escenario mediante herramientas inform ticas para generarnos la ilusi n de encontrarnos en un entorno diferente al real La primera idea que nos viene a la cabeza cuando se habla de RV es asociarla al sector del entretenimiento como son los videojuegos para situarnos en pocas pret ritas o futuristas donde luchamos o perseguimos los objetivos del juego Sin embargo el sector inmobiliario tambi n lleva

ya cierto tiempo trabajando con este concepto a la hora de atraer a potenciales compradores Muestran como quedar a la obra mediante un recorrido virtual antes de que esta se haya completado a modo de canal comercial Otros ámbitos donde también se utiliza la RV es en museos promociones turísticas en formación o en el campo médico donde ya llevan un largo recorrido Por otro lado la realidad aumentada aunque en muchas ocasiones se llega a confundir con la realidad virtual quizás debido a que utilizan tecnologías similares presenta una diferencia de concepto importante La realidad aumentada se centra en la visualización de información digital en un entorno físico del mundo real es decir son elementos tangibles que se asocian a su vez con elementos virtuales creando una realidad física palpable y a tiempo real en sitios reales Se podría decir que todos o la gran mayoría de personas a diario ya utilizan este tipo de realidad ya que si se quiere encontrar como llegar a un lugar determinado y no se sabe como la gran mayoría de estos usuarios optan por buscar a través de alguna aplicación y no coger el teléfono callejero Es decir recurren a aplicaciones como Yelp o también el mapa de Google donde desde el punto de vista conceptual se podría considerar como un ejemplo de realidad aumentada Respecto al BIM dependiendo del autor podemos encontrar una definición u otra donde la idea común que presentan podría sintetizarse como la creación de procesos de generación y gestión de datos del proyecto constructivo durante su ciclo de vida utilizando software dinámico de modelado en tres dimensiones a tiempo real vinculado con otra información digital como son los flujos de trabajo con el objetivo de reducir la pérdida de tiempo recursos en el diseño y en la construcción Para poder implementar el modelado de la información BIM es necesario tener un software compatible En el mercado actual hay una gran variedad de programas pero si nos centramos en nuestro campo de estudio vamos a trabajar con los paquetes de Autodesk por un lado Revit y AutoCAD por otro 3DS Studio MAX 3ds Max que no está vinculado a entornos BIM pero es ampliamente usado por los arquitectos para la representación fotorrealista de los edificios lo que les aproxima a las herramientas RV RA Si empezamos a explorar el uso que posee cada uno de los programas anteriores dentro de nuestro campo de estudio vemos por ejemplo que en Revit vamos a poder crear una tabla de planificación conocer el tipo de material que se va a colocar o crear cualquier tipo de estructura tanto en alzado como en tres dimensiones incluso se puede modificar una parte de la misma como por ejemplo un pilar intermedio y automáticamente se modifica en todo el proyecto incluidos planos y vistas AutoCAD es una de las herramientas más longevas y utilizadas dentro del sector posee una gran variedad de usos permite crear diseño y modelizar planos tanto en 2D como 3D pero en nuestro caso nos servir sobre todo para la visualización de planos comparación de instalaciones cotas y detalles constructivos 3ds Max tiene una implementación basada fundamentalmente en la visualización diseño y recorrido en 3D es una potente máquina para generar un renderizado Su uso habitual está ligado al sector de la producción y animación Posee una carpeta de materiales y texturas que nos servirán adelante para hacer la experiencia de RV más inmersiva y realista Unity 3d ha sido la herramienta escogida para implementar la realidad virtual Puede definirse como un motor de videojuegos multiplataforma con contenidos interactivos en 3D lo que nos permitirá diseñar recorridos virtuales por la edificación A nivel de

implementación hemos partido de dos modelos ya existentes del edificio B0 del Campus Nord uno desarrollado en 3ds Max que representa el diseño conceptual del modelo y que nos servirá para el estudio arquitectónico y estructural y otro en formato Revit preparado como modelo As Built donde analizaremos sus instalaciones y fontanería y también nos servirá para la comparación de modelos. Cada uno de estos dos representaciones del edificio nos sirven para estudiar dos casos de uso particulares. En el primero de ellos exploraremos las posibilidades que ofrece el recorrido virtual para la construcción tales como revisión de la arquitectura etiquetado virtual de espacios comparativa de planos, efectos de iluminación y disposición de mobiliario, etc. El segundo caso de estudio se centra en la revisión de las instalaciones como medio para evitar solapamientos entre diferentes proveedores remates de la obra, etc.
