## **Recent Progress In Mathematical Psychology:**

Recent Progress in Mathematical Psychology Cornelia E. Dowling, Fred S. Roberts, Peter Theuns, 2014-03-05

Mathematical psychology is an interdisciplinary area of research in which methods of mathematics operations research and computer science in psychology are used. Now more than thirty years old, the field has continued to grow rapidly and has taken on a life of its own. This volume summarizes recent progress in mathematical psychology as seen by some of the leading figures in the field as well as some of its leading young researchers. The papers presented in this volume reflect the most important current directions of research in mathematical psychology. They cover topics in measurement, decision and choice, psychophysics and psychometrics, knowledge representation, neural nets and learning models and cognitive modeling. Some of the major ideas included are new applications of concepts of measurement theory to social phenomena, new directions in the theory of probabilistic choice, surprising results in nonlinear utility theory, applications of boolean methods in the theory of knowledge spaces, applications of neural net ideas to concept learning, developments in the theory of parallel processing, models of response time, new results in inhibition theory and new concepts about paired associate learning.

**Structures: Recent Developments In Theory And Application** Jurgen Heller, Luca Stefanutti, 2024-07-09. Founded in 1985 by Jean Claude Falmagne and Jean Paul Doignon, Knowledge Structure Theory (KST) constitutes a rigorous and current mathematical theory for the representation and the assessment of human knowledge. The seminal work of these authors initiated a highly active research strand with an ever growing literature mostly scattered across various technical journals. Starting from a concise but comprehensive introduction to its foundations, this volume provides a state of the art review of KST. For the first time, the volume brings together the most important theoretical developments and extensions of the last decade and presents new areas of application beyond education with contributions by key researchers in the field. Among the

important advances covered by this book are 1 a comprehensive treatment of probabilistic models in KST 2 polytomous extensions of the theory 3 KST based psychological diagnostics and neuropsychological assessment 4 the representation and assessment of cognitive skills in problem solving as well as procedural skills In addition this book also includes an overview of available software for the application of KST

*Recent Advances in Cognitive-Developmental Theory* Charles J. Brainerd, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e g logical and mathematical development development of learning All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series

**Recent Advances in Language, Communication, and Social Psychology** Howard Giles, Robert N. St. Clair, 2018-10-26 Originally published in 1985 Detailed exploration of the dynamics of language within social psychology forms a social psychology of language which is distinct from other approaches This volume presents some of the growing body of research in this area with many theoretical models and ideas chapters consider the relationship between language and social situations looking at cognitive structures in how communication between individuals develops in childhood and beyond how it defines social situations influences others expresses feelings and values evokes social categorizations and how it can break down

*The International Handbook of Psychology* Kurt Pawlik, Mark R Rosenzweig, 2000-07-21 The International Handbook of Psychology is an authoritative resource covering all the main areas of psychological science and

written by an outstanding set of authors from around the world The 31 chapters cover not only scientific but also applied cross disciplinary aspects Supervised by an International Editorial Advisory Board IEAB of 13 eminent psychologists and edited by Professors Kurt Pawlik and Mark R Rosenzweig it is being published under the auspices of the International Union of Psychological Science IUPsyS by SAGE Publications Ltd in London The International Handbook of Psychology will be invaluable to advanced undergraduates graduate students and academics in psychology and will also be of interest to students of education sociology political science humanities philosophy informatics cognitive sciences neuroscience legal sciences and criminology and will serve as a general resource reference text written at a level comparable to Scientific American This impressive volume covers a tremendous amount of work It is well organized authors have generally kept to a standard brief It is also truly international both in authorship and the origin of the work referenced This will provide a very useful reference book for undergraduate and post graduate students British Journal of Educational Psychology

*Mathematical Psychology in Progress* Edward E. Roskam, 2012-12-06 This volume is the third volume of papers originating from the European Mathematical Psychology Group Earlier volumes were E Degreef J van Buggenhaut Eds Trends In Mathematical Psychology Amsterdam North Holland Publ Cy 1984 and E E Roskam R Suck Eds Progress in Mathematical Psychology Amsterdam Elsevier Science Publ As the title indicates this volume presents work in progress which was reported in one of the recent annual meetings of the European Mathematical Psychology Group The Group finds it worthwhile to disseminate this work using a review process which is somewhat less strict and a publication lag which is shorter than would be the case for standard international journals The editor is happy that the meetings of the European Mathematical Psychology Group are regularly attended by colleagues from overseas Their contributions also appear in this volume as was the case in earlier volumes Despite apparent heterogeneity the reader will observe that European mathematical psychologists have a keen interest in basic issues of mathematical modeling and measurement theory and that also substantive topics such as decision making perception and performance are studied in the context of formal modeling Also and perhaps of more than casual importance for future developments is the fact that theory experiment and data analysis go closely together It should therefore not surprise that psychometric topics and topics in scaling are represented in this volume alongside with topics of a more purely mathematical nature

**The Oxford Handbook of Perceptual Organization** Johan Wagemans, 2015 Perceptual organization comprises a wide range of processes such as perceptual grouping figure ground organization filling in completion and perceptual switching The Oxford Handbook of Perceptual Organization provides a broad and extensive review of the current literature written in an accessible form for scholars and students

*Measurement and Representation of Sensations* Hans Colonius, Ehtibar N. Dzhafarov, 2013-05-13 Measurement and Representation of Sensations offers a glimpse into the most sophisticated current mathematical approaches to psychophysical problems In this book editors Hans Colonius and Ehtibar N Dzhafarov top scholars in the field present a broad spectrum of innovative

approaches and techniques to classical problems in psychophysics at different levels of stimulus complexity The chapters emphasize rigorous mathematical constructions to define psychophysical concepts and relate them to observable phenomena The techniques presented both deterministic and probabilistic are all original and recent Subjects addressed throughout the six chapters of this volume include computing subjective distances from discriminability a new psychophysical theory of intensity judgments computing subjective distances from two discriminability functions an alternative to the model building approach based on observable probabilities and possible forms of perceptual separability developed within a generalization of General Recognition Theory Measurement and Representation of Sensations is a valuable text for both behavioral scientists and applied mathematicians

**Recent Advances and Future Directions in Causality, Prediction, and Specification Analysis** Xiaohong Chen, Norman R. Swanson, 2012-08-01 This book is a collection of articles that present the most recent cutting edge results on specification and estimation of economic models written by a number of the world's foremost leaders in the fields of theoretical and methodological econometrics Recent advances in asymptotic approximation theory including the use of higher order asymptotics for things like estimator bias correction and the use of various expansion and other theoretical tools for the development of bootstrap techniques designed for implementation when carrying out inference are at the forefront of theoretical development in the field of econometrics One important feature of these advances in the theory of econometrics is that they are being seamlessly and almost immediately incorporated into the empirical toolbox that applied practitioners use when actually constructing models using data for the purposes of both prediction and policy analysis and the more theoretically targeted chapters in the book will discuss these developments Turning now to empirical methodology chapters on prediction methodology will focus on macroeconomic and financial applications such as the construction of diffusion index models for forecasting with very large numbers of variables and the construction of data samples that result in optimal predictive accuracy tests when comparing alternative prediction models Chapters carefully outline how applied practitioners can correctly implement the latest theoretical refinements in model specification in order to build the best models using large scale and traditional datasets making the book of interest to a broad readership of economists from theoretical econometricians to applied economic practitioners

**Learning Spaces** Jean-Claude Falmagne, Jean-Paul Doignon, 2010-09-10 Learning spaces offer a rigorous mathematical foundation for practical systems of educational technology Learning spaces generalize partially ordered sets and are special cases of knowledge spaces The various structures are investigated from the standpoints of combinatorial properties and stochastic processes Learning spaces have become the essential structures to be used in assessing students competence of various topics A practical example is offered by ALEKS a Web based artificially intelligent assessment and learning system in mathematics and other scholarly fields At the heart of ALEKS is an artificial intelligence engine that assesses each student individually and

continuously The book is of interest to mathematically oriented readers in education computer science engineering and combinatorics at research and graduate levels Numerous examples and exercises are included together with an extensive bibliography Measurement With Persons Birgitta Berglund,Giovanni B. Rossi,James T. Townsend,Leslie R. Pendrill,2013-05-13 Measurements with persons are those in which human perception and interpretation are used for measuring complex holistic quantities and qualities which are perceived by the human brain and mind Providing means for reproducible measurement of parameters such as pleasure and pain has important implications in evaluating all kind of products services and conditions This book inaugurates a new era for this subject a multi and inter disciplinary volume in which world renowned scientists from the psychological physical biological and social sciences reach a common understanding of measurement theory and methods In the first section generic theoretical and methodological issues are treated including the conceptual basis of measurement in the various fields involved the development of formal representational and probabilistic theories the approach to experimentation and the theories models and methods for multidimensional problems In the second section several implementation areas are presented including sound visual skin and odor perception functional brain imagining body language and emotions and finally the use of measurements in decision making Measurement with Persons will appeal to a wide audience across a range of sciences including general psychology and psychophysics measurement theory metrology and instrumentation neurophysiology engineering biology and chemistry

Proceedings of the International Symposium on Recent Developments in Auditory Mechanics Hiroshi Wada,2000 Symposium held in 1999 near Sendai in Japan *Knowledge Spaces* Jean-Claude Falmagne,Dietrich Albert,Christopher

Doble, David Eppstein, Xiangen Hu, 2013-06-20 The book describes up to date applications and relevant theoretical results. These applications come from various places but the most important one numerically speaking is the internet based educational system ALEKS. The ALEKS system is bilingual English Spanish and covers all of mathematics from third grade to the end of high school and chemistry. It is also widely used in higher education because US students are often poorly prepared when they reach the university level. The chapter by Taagepera and Arasasingham deals with the application of knowledge spaces independent of ALEKS to the teaching of college chemistry. The four chapters by Albert and his collaborators strive to give cognitive interpretations to the combinatoric structures obtained and used by the ALEKS system. The contribution by Eppstein is technical and develops means of searching the knowledge structure efficiently.
