Recent Advances In Parsing Technology:

Recent Advances in Parsing Technology H. Bunt, Masaru Tomita, 1996-08-31 In Marcus 1980 deterministic parsers were introduced These are parsers which satisfy the conditions of Marcus's determinism hypothesis i.e. they are strongly deterministic in the sense that they do not simulate non determinism in any way In later work Marcus et al 1983 these parsers were modified to construct descriptions of trees rather than the trees themselves The resulting D theory parsers by working with these descriptions are capable of capturing a certain amount of ambiguity in the structures they build In this context it is not clear what it means for a parser to meet the conditions of the determinism hypothesis The object of this work is to clarify this and other issues pertaining to D theory parsers and to provide a framework within which these issues can be examined formally Thus we have a very narrow scope We make no arguments about the linguistic issues D theory parsers are meant to address their relation to other parsing formalisms or the notion of determinism in general Rather we focus on issues internal to D theory parsers themselves

Visual Language Theory Kim Marriott, Bernd Meyer, 2012-12-06 Kim Marriott Bernd Meyer Communication is one of the hallmarks of humans When we think of human communication most people first think of spoken and written languages These are similar in that symbols in the language are encountered and processed sequentially either temporally as they are spoken or as characters are read across a page However not all human communication is sequential in nature Important components of human communication are visual languages such as maps or diagrams In these languages the basic symbols are not encountered sequentially but rather seen together at a glance Visual languages are ubiquitous in human cultures ranging from traditional paintings of central Australian aborigines which are in part maps of the countryside to an architect's design of a new building Visual languages have been employed from earliest pre history to the present and are used in almost every human endeavor They cover the entire spectrum of human expression ranging from fine art such as an abstract expressionist's private language to precise technical communication using rigorously defined notation such as musical notation mathematical notation or street maps Some visual languages such as sign languages used by the deaf community substitute spoken language entirely Indeed sign languages for example American Sign Language are a particularly interesting instance of visual communication since they use three dimensional spatial arrangements of signs in combination with their sequential temporal order to constitute meaning

Grammatical theory Stefan Müller, This book introduces formal grammar theories that play a role in current linguistic theorizing Phrase Structure Grammar Transformational Grammar Government Binding Generalized Phrase Structure Grammar Lexical Functional Grammar Categorical Grammar Head Driven Phrase Structure Grammar Construction Grammar Tree Adjoining Grammar The key assumptions are explained and it is shown how the respective theory treats arguments and adjuncts the active passive alternation local reorderings verb placement and fronting of constituents over long distances The analyses are explained with German as the object language The second part of the book compares these approaches with respect to their predictions regarding language acquisition and psycholinguistic plausibility The nativism hypothesis which assumes that humans possess genetically determined innate language specific knowledge is critically examined and alternative models of language acquisition are discussed The second part then addresses controversial issues of current theory building such as the question of flat or binary branching structures being more appropriate the question whether constructions should be treated on the phrasal or the lexical level and the question whether abstract non visible entities should play a role in syntactic analyses It is shown that the analyses suggested in the respective frameworks are often translatable into each other The book closes with a

chapter showing how properties common to all languages or to certain classes of languages can be captured

Conceptual Structures: Leveraging Semantic Technologies Sebastian Rudolph, Frithjof Dau, Sergei O. Kuznetsov, 2009-07-25 This book constitutes the refereed proceedings of the 17th International Conference on Conceptual Structures ICCS 2009 which took place in Moscow Russia on July 26-31 2009 The 18 papers presented together with 5 invited contributions were carefully reviewed and selected from approximately 50 submissions Originally centered around research on knowledge representation and reasoning with conceptual graphs over the years ICCS has broadened its scope to include innovations from a wider range of theories and related practices among them other forms of graph based formalisms like RDF or existential graphs formal concept analysis semantic Web technologies ontologies concept mapping and more

Head-Driven Phrase Structure Grammar Stefan Müller, Anne Abeillé, Robert D. Borsley, Jean-Pierre Koenig, 2024-11-07 Head Driven Phrase Structure Grammar HPSG is a constraint based or declarative approach to linguistic knowledge which analyses all descriptive levels phonology morphology syntax semantics pragmatics with feature value pairs structure sharing and relational constraints In syntax it assumes that expressions have a single relatively simple constituent structure This volume provides a state of the art introduction to the framework Various chapters discuss basic assumptions and formal foundations describe the evolution of the framework and go into the details of the main syntactic phenomena Further chapters are devoted to non syntactic levels of description The book also considers related fields and research areas gesture sign languages computational linguistics and includes chapters comparing HPSG with other frameworks Lexical Functional Grammar Categorical Grammar Construction Grammar Dependency Grammar and Minimalism

The Integration of Phonetic Knowledge in Speech Technology William J. Barry, William John Barry, Willem A. van Dommelen, 2006-03-31 Continued progress in Speech Technology in the face of ever increasing demands on the performance levels of applications is a challenge to the whole speech and language science community Robust

recognition and understanding of spontaneous speech in varied environments good comprehensibility and naturalness of expressive speech synthesis are goals that cannot be achieved without a change of paradigm This book argues for interdisciplinary communication and cooperation in problem solving in general and discusses the interaction between speech and language engineering and phonetics in particular With a number of reports on innovative speech technology research as well as more theoretical discussions it addresses the practical scientific and sometimes the philosophical problems that stand in the way of cross disciplinary collaboration and illuminates some of the many possible ways forward Audience Researchers and professionals in speech technology and computational linguists *Framework and Resources for Natural Language Parser Evaluation* Tuomo Kakkonen,2007 **Spotting and Discovering Terms Through Natural Language Processing** Christian Jacquemin,2001 The acquired parsed terms can then be applied for precise retrieval and assembly of information
