Recent Lifeline Seismic Risk Studies Anne Setian Kiremidjian, 1990 Presents a collection of papers presented at the 1990 Annual Civil Engineering Convention and Exposition in California This work summarizes seismic loss and reliability analysis methods for complex spatially distributed lifeline systems It emphasises on methods for direct loss estimation rather than on down time and other indirect losses

Acceptable Risk Processes Craig Taylor, Erik VanMarcke, 2002-01-01 Prepared by the Council on Disaster Reduction and the Technical Council on Lifeline Earthquake Engineering of ASCE This TCLEE Monograph provides engineers and decision makers with tools to help them better understand acceptable risk

processes and then develop risk reduction strategies and implement mitigation actions to reduce lifeline losses from future earthquakes. The disruption of lifelines from natural hazards has a direct impact on the world's regional economies and the health of their citizens. Therefore, it is important to understand what natural hazards are, how they can affect infrastructure, lifelines, and what can be done to minimize their impact. These three elements in turn influence decisions that involve acceptable risk processes. The topic of acceptable risk provides one way of bringing integrated systems risk evaluations for disaster explicitly into a decision making context. Topics include technical issues, risk criteria issues, and communication, administration, and regulation issues.

Practical Lessons from the Loma Prieta Earthquake National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Geotechnical Board, 1994-02-01. The Loma Prieta earthquake struck the San Francisco area on October 17, 1989, causing 63 deaths and 10 billion worth of damage. This book reviews existing research on the Loma Prieta quake and draws from it practical lessons that could be applied to other earthquake-prone areas of the country. The volume contains seven keynote papers presented at a symposium on the earthquake and includes an overview written by the committee offering recommendations to improve seismic safety and earthquake awareness in parts of the country susceptible to earthquakes.
