Recent Progress In Many Body Theories:

Recent Progress in Many-Body Theories T.L. Ainsworth, C.E. Campbell, B.E. Clements, E. Krotscheck, 2012-12-06 The present volume contains the texts of the invited talks delivered at the Seventh International Conference on Recent Progress in Many Body Theories held at the University of Minnesota during the period August 26-31 1991. The proceedings of the Fourth Conference Oulu Finland 1987 and Fifth Conference Arad Israel 1989 have been published by Plenum as the first two volumes of this series. Papers from the First Conference Trieste 1978 comprise Nuclear Physics volume A328 Nos 1-2. The Second Conference Oaxtepec Mexico 1989 was published by Springer Verlag as volume 142 of Lecture Notes in Physics entitled Recent Progress in Many Body Theories. Volume 198 of the same series contains the papers from the Third Conference Altenberg Germany 1983. These volumes are intended to cover a broad spectrum of current research topics in physics that benefit from the application of many body theories for their elucidation. At the same time there is a focus on the development and refinement of many body methods. One of the major aims of the conference series has been to foster the exchange of ideas among physicists working in such diverse areas as nucleon-nucleon interactions, nuclear physics, astronomy, atomic and molecular physics, quantum chemistry, quantum fluids and condensed matter physics. The present volume contains contributions from all of these areas.

Recent Progress in Many-body Theories Jordi Boronat, 2008. This volume contains the main contributions to the 14th International Conference on Recent Progress in Many Body Theories (RPMBT14) held at the Technical University of Catalonia, Spain, in July 2007. This conference, which was first held in Trieste in 1979, is devoted to new developments in the field of many body theories which are being applied and developed in a rapidly growing number of fields. The emphasis is twofold: progress in the technical aspects of microscopic theories and a review of recent applications of many body techniques. In addition to the more traditional topics such as nuclear physics and quantum liquids, the present volume also includes the most recent results on atomic physics, cold Bose and Fermi gases, phase transitions and quantum information. Moreover, the volume contains the lectures of the winners of the 2007 Feenberg Medal and 2007 Kuemmel Award, as well as their laudations.

Recent Progress In Many-body Theories - Proceedings Of The 11th International Conference Raymond F Bishop, Tobias Brandes, Klaus A Gernoth, Niels R Walet, Yang Xian, 2002-12-16. Quantum many body theory as a discipline in its own right dates largely from the 1950s. It has developed since then to its current position as one of the cornerstones of modern theoretical physics. The field remains vibrant and active, vigorous and exciting. Its most powerful techniques are truly universal. They are constantly expanding to find new fields of application while advances continue to be made in the more traditional areas. To commemorate the impending 80th birthdays of its two co-inventors, Fritz Coester and Hermann Kmmel, one such technique, namely the coupled

cluster method was especially highlighted at this meeting the eleventh in the series of International Conferences on Recent Progress in Many Body Theories The history of the coupled cluster method as told here mirrors in many ways both the development of the entire discipline of microscopic quantum many body theory and the history of the series of conferences The series itself is universally recognised as being the premier series of meetings in this subject area Its proceedings have always summarised the current state of the art through the lectures of its leading practitioners The present volume is no exception No serious researcher in quantum many body theory or in any field which uses it can afford to be without this volume

Recent Progress in MANY-BODY THEORIES A.J. Kallio,E. Pajanne,R.F. Bishop,2013-03-14 The present volume contains the texts of the invited talks delivered at the Fifth International Conference on Recent Progress in Many Body Theories held in Oulu Finland during the period 3-8 August 1987 The general format and style of the meeting followed closely those which had evolved from the earlier conferences in the series Trieste 1978 Oaxtepec 1981 Altenberg 1983 and San Francisco 1985 Thus the conferences in this series are intended as far as is practicable to cover in a broad and balanced fashion both the entire spectrum of theoretical tools developed to tackle the quantum many body problem and their major fields of application One of the major aims of the series is to foster the exchange of ideas and techniques among physicists working in such diverse areas of application of many body theories as nucleon-nucleon interactions nuclear physics astronomy atomic and molecular physics quantum chemistry quantum fluids and plasmas and solid state and condensed matter physics A special feature of the present meeting however was that particular attention was paid in the programme to such topics of current interest in solid state physics as high temperature superconductors heavy fermions the quantum Hall effect and disorder A panel discussion was also organised during the conference under the chairmanship of N.W. Ashcroft to consider the latest developments in the extremely rapidly growing field of high T superconductors
