Subject Guide to Books in Print, 1996 *Books in Print*, 1987 *Scientific and Technical Books and Serials in Print*, 1989 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1988 **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 *American Scientist*, 1942
Acta Neurologica, 1987 **Forthcoming Books** Rose Army, 1986 *Journal of Experimental Biology*, 2001

Archives of Gerontology and Geriatrics, 1992 **Receptor Binding** Alan A. Boulton, Glen B. Baker, Pavel D. Hrdina, 1986-06-20 Techniques in the neurosciences are evolving rapidly. There are currently very few volumes dedicated to the methodology employed by neuroscientists and those that are available often seem either out of date or limited in scope. This series is about the methods most widely used by modern day neuroscientists and is written by their colleagues who are practicing experts. Volume 1 will be useful to all neuroscientists since it concerns those procedures used routinely across the widest range of disciplines. Collecting these general techniques together in a single volume strikes us not only as a service but will no doubt prove of exceptional utilitarian value as well. Volumes 2 and 3 describe all current procedures for the analyses of amines and their metabolites and of amino acids respectively. These collections will clearly be of value to all neuroscientists working in or contemplating research in these fields. Similar reasons exist for Volume 4 on receptor binding techniques since experimental details are provided for many types of ligand receptor binding including chapters on general principles, drug discovery and development and a most useful appendix on computer programs for Scatchard nonlinear and competitive displacement analyses. Volume 5 provides procedures for the assessment of enzymes involved in biogenic amine synthesis and catabolism. Volumes in the NEUROMETHODS series will be useful to neurochemists, pharmacologists, physiologists, anatomists, psychopharmacologists, psychiatrists, neurologists and chemists, organic analytical, pharmaceutical, medicinal, in fact everyone involved in the neurosciences both basic and clinical.

Alan A. Boulton, Glen B. Baker, Pavel D. Hrdina, 1986 *Brain Receptor Methodologies Pt A* Paul J. Marangos, 2012-12-02
Brain Receptor Methodologies Part A: General Methods and Concepts: Amines and Acetylcholine provides information pertinent to neurotransmitter and neuromodulator receptors in brain. This book explores the methodologies that can be used to address several basic and clinical problems. Organized into two sections encompassing 18 chapters, this book starts with an overview of the receptor concept which can be validated from indirect evidence obtained in studies of the quantitative aspects of drug antagonism. This text then examines the radioligand receptor binding interactions. Other chapters consider immunocytochemistry which has a primary role in determining the precise distribution of regulatory peptides to neural and endocrine elements of the diffuse neuroendocrine system. The final chapter discusses the use of the radioligand binding procedure for the study of muscarinic receptors which has expanded the area of muscarinic receptor pharmacology. Biochemists, pharmacologists, physiologists and researchers engaged in the fields of neurobiology and neuroscience will find

this book extremely useful Neurochemistry of Cholinergic Receptors Eduardo D. P. De Robertis, Jochen Schacht, 1974

Brain Receptor Methodologies Paul J. Marangos, Iain C. Campbell, Robert M. Cohen, 2013-10-22 Brain Receptor Methodologies Part B Amino Acids Peptides Psychoactive Drugs is the second of the two part first volume of the Neurobiological Research series which provides a comprehensive view of various subdisciplines within neurobiology The first volume Parts A and B deals with the area of neurotransmitter and neuromodulator receptors in brain future volumes will cover the subdisciplines of neuroanatomy neurophysiology brain specific macromolecules neurochemistry and behavioral neurobiology It is hoped that the series will be of equal value for both basic as well as clinical scientists Part B continues from Part A with the remainder of Section II specific receptor binding methodologies Subsection II B deals with receptors for amino acids and neuropeptides and covers areas including GABA glycine carnosine opiates bombesin CCK TRH and substance P Amino acids probably represent the majority of brain neurotransmitter substances at least relative to the amines and acetylcholine although with the exception of GABA the amino acids remain relatively uncharacterized in brain Their further study should receive high priority *Receptors in the Nervous System* Abel Lajtha, 2013-06-29 A major advance in the biological sciences in the past decade has been the biochemical identification of cell membrane receptors The existence of receptor substances on the surface of cells that recognize and bind to extracellular molecules was proposed at the beginning of the century by the pharmacologist and immunologist Paul Ehrlich and the physiologist J N Langley Since then receptors have been found to play an important role in numerous physiological and pathological processes Over the years many attempts have been made to physically isolate and chemically characterize receptors but because of the receptors extremely low concentration and membrane localization these efforts have met with limited success Yet despite the failure to characterize receptor substances the concept of the presence of such molecules has had considerable heuristic value Using pharmacological physiological and immunologic approaches researchers have identified several specific receptors e g α and adrenergic nicotinic and muscarinic cholinergic and histaminergic With the characterization of various types of receptors on cell membranes many drugs were developed that proved to be experimentally and therapeutically useful It was only in the early 1970s that methods for the specific measurement chemical characterization and physical isolation of cell membrane receptors were developed These advances were made possible by the availability of ligands with high specific radioactivity that retained their biological activity and of experimental procedures that differentiated between specific and non specific binding of ligands Chemical and Functional Assays of Receptor Binding Barry I. Hoffer, Society for Neuroscience, Nancy R. Zahniser, 1986 Methods in Neurotransmitter Receptor Analysis Henry I. Yamamura, S. J. Enna, Michael J. Kuhar, 1990 *Neuropeptide Analogs, Conjugates, and Fragments* P. techniques such as novel synthetic approaches biotinylation purification and characterization radioligand techniques and assay development use of agonists and antagonists distinguishing receptor subtypes conjugation to carrier proteins antiidiotypic antibody development and radiolabeling Neuroscientists biochemists neurochemists and pharmacologists will find the book useful *Regulation of Transmitter Function* European Society for Neurochemistry.
